

## DAS Light Hanger Installation

These Light Hangers ensure that our NEW Light Fixtures are a perfect fit in any of our Fish Enclosures.

Light Hangers may be placed onto the railings within most enclosures from the back of the railing, in some cases it can be installed from the front.

Add silicone to the brackets after they have been put in place so they stay secure. You may add the silicone to the 2 holes on the side of the hanger as indicated. Allow the silicone to dry for at least 20 minutes before adding the light fixture.

We recommed installing the light brackets 14cm or 5.5" from the front of the tank.
