

MEPRO TRU-DOT®

Self-Illuminated Sights for Rifles, Shotguns and Light Weapons

AR 15, M-16, M-4

The AR15/M16/M4 green dot front and rear sights are specifically designed to fit all standard rifles. A-1 users have the choice of a 4-dot or 2-dot rear sight as well as a thin front sight or standard size. The tritium-powered sights improve the shooters capabilities in day light, low light and night time conditions. Operationally, they help acquire and focus on the target faster.

AK & AKM

The AK sights, featuring the same tritium power source, are designed to fit AK & AKM pattern rifles. Shooters using the AK and AKM series now have the same capabilities to engage targets faster in any lighting condition—day light, low light and night time.

SHOTGUNS

Shotgun users can now upgrade their guns to tritium-powered sights and front beads. Whether for tactical, 3-Gun competition or hunting, shotgunners can improve their capabilities. Sights are available for select models of Remington, Mossberg and Benelli.

RIFLES

IWI Galil, Heckler & Koch and Ruger rifle users can now benefit from tritium powered Meprolight® Tru-Dot® sights. These sights are the solution to precise targeting in any lighting condition—daylight, low-light or night. Upgrade your capabilities now.
