

# elleeplex RE•GEN

THE ART OF HEALTHY LASH LIFT

## INSTRUCTIONS FOR USE

**Elleplex Re-Gen (Next Gen) now allows for extra application options as it is a cream emulsion and has been designed to give more optimum mixing capabilities.**

*Special note:* If you are performing a tinting / colouring service after lash lift or brow lamination mix Re-Gen with the tinting step only.

### **APPLICATION OPTION 1: EXPRESS TINTING METHOD**

---

- Dispense tinting colour into dish and mix with oxidant / developer.
- Once tint is mixed with developer proceed to dispense and mix 1 small drop of Elleplex Re-Gen (Next Gen) into the tinting mixture. (Maximum ratio of 8 parts tint to 1 part Re-Gen).
- Proceed to tinting eyelashes or brows in the usual manner.
- Warning: Mixing too much Re-Gen could dilute the performance of the tinting colour, only mix a very small amount of Re-Gen into the mixture if you choose this method.

### **APPLICATION OPTION 2: NO TINTING REQUIRED / STAND-ALONE METHOD**

---

*Stand-alone nourishing treatment after setting lotion step with lash lift (only)*

- Carefully remove the setting lotion from the lashes with a damp cue tip, but leave lashes still attached to shield or rod.
- Dispense a small portion of Re-Gen into a dish or glue ring and apply the Elleplex Re-Gen to the entire lashes. Apply 1mm above the base lash line area all the way up the lashes to the tip. Avoid product touching on the skin or eye line area. Apply using an application brush, micro brush or lip brush. Allow to absorb for 3 - 5 mins and proceed to removing and rinsing all product, glue and shields / rods from the lashes.
- Brush through and dry the lashes with a mascara brush.

# elleeplex RE•GEN

THE ART OF HEALTHY LASH LIFT

## APPLICATION OPTION 3: NO TINTING REQUIRED / MIX METHOD

*Mix with setting lotion for Lash Lift / Lamination and Brow Lamination*

- Dispense setting lotion into dish, then dispense one (1) very small drop of Re-Gen to the mixture at maximum ratio of 8 parts Setting Lotion and 1 part Re-Gen.
- Warning: Mixing too much Re-Gen could dilute the performance of the setting lotion, so only mix a very small amount of Re-Gen into the mixture if you choose this method.
- Allow setting lotion to process for the usual timing you would use for the relevant hair texture (generally 5 - 8 mins depending on hair strength and texture)
- Remove setting lotion in the usual manner for lash lift with rinsing.
- Remove setting lotion in usual manner for brow lamination, damp cotton tip, make up remover pad and then dry wipe.

*Special note:* **DO NOT leave Re-Gen on the brows after brow lamination, excess use on brow hairs can in some cases drop the result, it is not recommended to use Re-Gen on brows after setting lotion step. Only use Elleeplex after care serum if brows require more hydration.**

**Elleeplex After Care** and **Elleevate** retail products can be applied after all services to help style and give extra hydration. For more information on using Elleebana products contact your closest distributor or [www.elleebana.com](http://www.elleebana.com)
