

[introducing. **FINISHES.**]

BRASS;

Our brass products are made from solid brass. The Brass used is graded 'C3604', this is brushed and finishes with a clear coat lacquer to protect the finish

brass

SMOKED BRONZE;

Our Smoked Bronze finish is extremely unique, there isn't another finish quite like it on the market. This is made from the same C3604 Brass as our solid Brass products. This then follows a process where it is dipped in a chemical bath, baked dry and hand brushed to finish. This brings the Brass base material back through giving the finish a unique effect.

smoked bronze

STEEL;

Our Steel finish is made from Stainless Steel. This is graded 304 and is extremely durable, this is not lacquered due to the material's natural durability and consistency.

steel

BLACK;

Our Black finish is unique as this is made from Anodised Aluminium. This means all Black products will be noticeably lighter than the rest, but this finish process gives a good consistent finish that completely coats the product.

black

GUN METAL;

Gun Metal is a finish that is done via a process called PVD. This is again, extremely durable and done over Stainless Steel, a naturally durable material.

gun metal

BURNT STEEL;

Burnt Steel is another PVD finish done over Stainless Steel. Burnt Steel is a real standout, unique finish. Perfect for sales pitches and putting all eyes on B+P.

burnt steel

WELDERS BLACK;

Welders Black is slightly different to our standard 'Black' finish. The products are slightly more matte in appearance, whereas the 'Black' products are slightly more gloss. Welders Black is another PVD Stainless Steel finish and is UV stable.

PVD BRASS;

PVD Brass is a unique B+P finish. Stainless steel is used as the base metal, a PVD coating is then applied to make the product look like Brass. This finish differs to the standard Brass products as it is a lot more dark in comparison. This finish is used when we have products used in wet environments – Cast, Shelving and Pet ranges
