The E

Blade

Made of Precision

Precision made of light: captured and directed, light is freed and multiplied through a blade, The Blade.

Miniaturisation is not just a question of manufacturing ability. We have encapsulated optical mastery and innovative know-how in just 18 mm. The light is aimed and maximised by a micro optical assembly that uses our patented Opti Beam technology. We construct the path of each ray emitted and optimise the position of every LED and its reflection on each angle of the reflector.

The sum of the individual rays guarantees maximum light uniformity by creating a sharp final effect with no colour flaws. The light source is also invisible, which guarantees excellent visual well-being. Every component and every detail is part of a sophisticated mechanism that is adjusted in-house by our team of designers who boast the same care and calm as master watchmakers.

Inside architecture

From Blade to circle,
light as project component.

Laser Blade created magic by generating a luminous circle from an invisible line. defies imagination and sets itself up as a new icon of miniaturisation and precision. A gem of precision that makes light an even more important design element that blends into architecture like never before and inspires new forms of expression by redefining the relationship between space, light and design. The Blade cuts into walls to free light from the thin, powerful groove it

slips into. Installation is rapid, simple and fast. We take immense care over every detail of the process and we design solutions that can adapt to any false ceiling thickness. Removable screens, extraction clips and fixture supports transform time into quality. We regard simplicity as standard. Now we can say that architecture is also light because Laser Blade XS brings together all the elements required to construct a new space that contains them.

Scale 1:1

28mm

An entire wall in your hand

The smallest professional wall washer in the world is an absolute masterpiece of high precision illumination.

As thin as a blade, it transforms optic power into vertical precision: absolute uniformity from top to bottom. Technological innovation and latest generation LEDs together with material, optic and application research have allowed us to use every precious millimeter, eliminating everything superfluous. The Wall Washer version, unique thanks to its size and performance, presents an exclusive combination of patented reflectors and optic screens

that guarantee uniformity on vertical surfaces from the top to the bottom without any dark areas or scallop effects. Available also with Tunable White to reproduce different shades of white light to match natural light variations. Laser Blade XS Wall Washer has different lengths to accommodate different geometrical spaces. The result is invisible to the eyes, but not to the sight.

Scale 1:1

Free your Blade

Changing perceptions and opening new application opportunities where detail matters.

Laser Blade XS brings new sizes and new shapes, lines and squares, to interpret perceptive languages made of architecture for architecture. The Blade is in the detail and becomes exclusive detail. Tunable White technology reproduces the nuances of white light to stimulate our emotional reactions by alternating or combining with natural light. A perfect solution for lighting numerous contexts. In retail and museum environments, where

setups change according to what is displayed, Tunable White technology offers the flexibility and freedom required to meet changing needs. In hospitality and residential areas, on the other hand, the variation of white light helps create stimulating and exclusive atmospheres throughout the day or in preset periods. The Blade is responsive: it puts people at the centre and adapts to their perceptive desires.

17 Invisible source
18 Overview
22 Spec Guide

Laser

Blade

Laser Blade is a collection of forms and dimensions.
Visual comfort is its hallmark.

Laser Blade

Invisible source.

Laser Blade is an icon of innovation. It has revolutionised the concept of downlight. It is a linear product with a miniaturised optic that generates a circular emission with an extremely uniform and chromatic yield. The light source is invisible, resulting in absolute visual comfort, with UGR<10 values. Laser Blade is the result of an integrated process of different disciplines, including light science, technology, design and culture. Laser Blade

is not a device but a system of continuous innovation. It is a step forward in terms of technology, size, colour and installation. Laser Blade becomes greater and more powerful. It is coloured too and can be completely hidden. Laser Blade shrinks in size to become The Blade. Everything changes except light. Absolutely comfortable, uniform and with an extremely high chromatic selection. Laser Blade is light in continuous evolution.
