

Linealuce High Performance Linear System

Light First

Social innovation through lighting

Socially engaged

iGuzzini is an international community at the service of architecture and the development of a culture of light for a better society and quality of life. It is a centre of excellence for the study of light in all its forms, and it produces lighting systems in collaboration with leading lighting designers, architects, universities and research centres all over the world. **Respecting the environment and creating organic well-being and sustainable economies** are the key factors we need to focus on at a global level to implement real progress in society. Lighting is, first and foremost, for people, and we are firmly committed to supporting local mayors and encouraging public organizations and leaders of architecture, industry and commerce to use energy responsibly in order to improve wellbeing and quality of life.

Lighting innovation

Social innovation means responding to emerging needs with new ways of cooperating and networking, by producing sustainable ideas and identifying new tools. Light changes things. It is at the centre of social evolution. It is the expression of a new vital energy that runs through cities, building architecture and creating well-being for people. Lighting illuminates nature. It reveals worlds and relationships, communities and mechanisms. And iGuzzini works to use light to improve the relationship between mankind and the environment, through research, manufacturing, technology and knowledge.

Linealuce

High Performance Linear System.

A complete linear system for enhancing both indoor and outdoor environments.

Linealuce is a linear product that brings architectural details to life. The range has now been extended with higher performance solutions that minimize energy consumption per meter, in accordance with the size of the wall being lit. Linealuce also boasts a distinctive design and technology, featuring the most up-to-date

solutions since its creation in 1999. The Compact and Mini, surface-mounted and recessed versions, are available with a vast range of optics and colour temperatures and when combined with control systems are ready to help designers create constantly changing stories for architecture to tell.

Main Features

The right white.

Different degrees of white to ensure you always feel at home.

Linealuce gives urban scenarios a pleasant, family feeling. Its inviting white light turns public spaces into the ideal place to meet and share experiences. Two versions are available: Monochrome White (with dimmer option) and Tunable White.

We produce Linealuce Monochrome White in three different colour temperatures: 2700K*, 3000K and 4000K. Linealuce Tunable White is the ideal

product for continuously modulating the colour temperature from 2700K to 6000K, while maintaining a high colour yield.

This dynamic light is also perfect for altering perceptions of architecture and adapting lighting to changes in time and season, in order to emphasize, for example, the warm tones of Autumn, or the soft, fresh shades of Spring.

Linealuce Compact Recessed WNC

WNC - Tunable White

A different perception of architecture.

WNC - Tunable White

Colour variation throughout the day.

Morning

Evening

Linealuce

Main Features

A different colour temperature modulated by control systems to suit different times of day, and heighten well-being in closed or underground spaces.

Cold seasons

Monochrome White

Different colour temperatures to highlight materials.

* Version available on request

Wonderful colours.

A careful selection of LEDs to create a perfect mixture of colours.

Linealuce is the perfect tool for colouring surfaces. The RGB, RGBW and WRGBW versions guarantee an even, coloured light. Each, individual LED is carefully selected for its colour and tested for the quantity of flux it emits. This process ensures that the mixture of colours between the products is always the same,

especially in the case of blended tones. We seek to transmit moods, capture attention, and astound people with our beautiful, comfortable coloured light. But our aesthetic sense goes well beyond simply designing a luminaire with thrilling light, combining visual effect with lasting technical performance.

Linealuce Compact Recessed RGB

RGB

Variable, coloured lighting is achieved by mixing together three basic tones (red, green and blue).

RGBW - Real White

We have added Real White to our RGB technology in order to provide a white light (figure A)

far superior to the tone obtained by three RGB colours. (figure B).

Linealuce

Main Features

Linealuce Compact WRGBW

Linealuce Compact Recessed RGBW

WRGBW - Real White

When installed individually or at the start of a continuous line, Linealuce WRGBW creates a

symmetrical white light on the surface to be lit.

Control systems.

Intelligent solutions guaranteeing maximum effect with minimum consumption.

Linealuce creates innumerable scenarios that can be personalised and adapted using two different control systems. One solution that is particularly well-suited to RGB, Real White RGBW and Tunable White WNC lighting systems is where a Master Pro DMX interacts with Linealuce DMX* to control complex multimedia installations efficiently and in real time. Another solution that is particularly well-suited

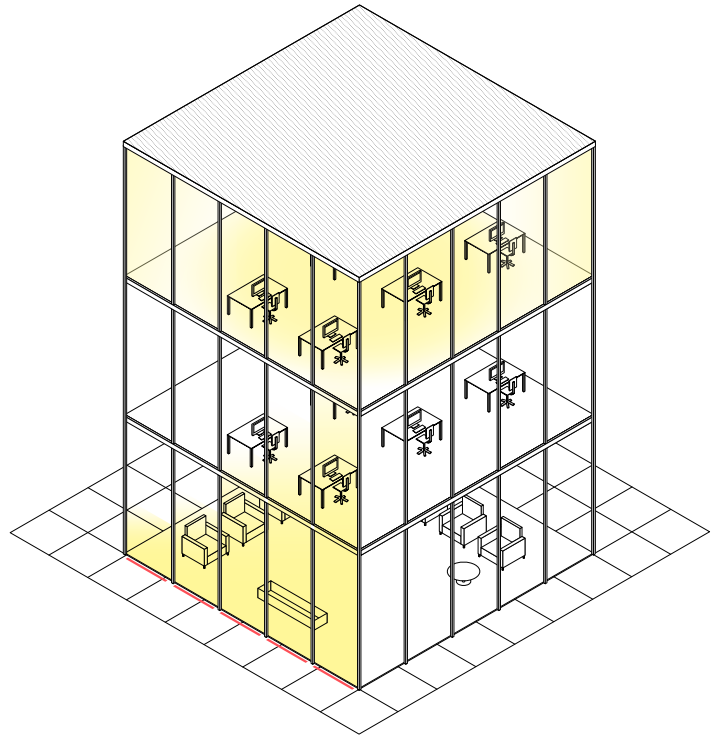

to RGB, Real White RGB and Tunable White WNC lighting systems is where Linealuce DALI* luminaires are controlled by a Master Pro Evo system. This is ideal for installations that need to be integrated with building automation systems. Our technical team is always ready to advise customers on the best way to configure control systems. Every project is carefully researched and specific requirements analysed.

DALI

Master Pro Evo

This intelligent control system, based on KNX, LON and DALI technology, is used to integrate all the functions of a building that are usually controlled separately.

DMX

Master Pro DMX

The most innovative DMX system available. It uses RDM technology and includes immediate diagnosis and check functions.

* Data speed for the DALI protocol is 1.2kb/second, and 250kb/second for the DMX protocol.

Four original optics.

There is a right light for every context.

Linealuce has four optics: Wall Grazing for emphasizing volumes, Wall Grazing Spot for an even light beam, Spot 10° for highlighting individual

architectural details and Flood for a diffuse, all-embracing light. This ensures that every product is highly versatile.

Wall grazing

The Linealuce models fitted with a Wall Grazing optic are available with different powers per linear metre so the flux can be optimized according to the height to be lit (up to 5 metres for the Linealuce Mini and up to 15 metres for the Compact version). This type of optic enhances surface textures and creates positive-negative effects when installed on openings.

Flood 44°

The flood optic creates a diffused, all-embracing light that unites different elements into a highly pleasant context and experience.

*The height of the light effect depends on the surface and context

Linealuce

Main Features

A complete system is one that offers different technical solutions, so all the application requirements of a particular project can be met with one single product.

Wall grazing spot

Super powerful.
The Linealuce Compact Wall Grazing Spot evenly illuminates elements with different heights. Linealuce luminaires fitted with this kind of optic can also be used as a linear-shaped spotlight.

72.790cd*

Spot 10°

The Spot 10° optic enhances architectural details with a concentrated beam of light emitted by a linear product, an effect that is usually obtained with cylindrical or parallelepiped luminaires.

*The value refers to a single 1-metre long Linealuce module.

We continually build new and complex technological processes. We apply our know-how to all the stages in the production process. During moulding, for example, we respect tolerance margins that even if minute, have a significant impact on the lighting performance of our luminaires.

Perfect vertical illumination.

A new lens for unmatched results.

The Grazer lens used in our Linealuce line is microstructured on one side. This unique feature controls the initial effect of its direct light that could otherwise only be aimed by applying a satin finish to the glass screen. Being innovative is the commitment we make to all designers. We

continually seek to improve the functional qualities and style of our products by combining visual comfort, consistency, intensity and reliability. This is how we can be sure to offer a high quality partnership to those who enhance the experience of daily life through light.

Continuous line

The light is constant and even over the whole surface. There are no dark areas near the beginning or end of the luminaire.

No dark areas

Our innovative optic system avoids less illuminated areas being created near the luminaire.

Colour consistency

The human eye is extremely sensitive to even the slightest variation in colour. With grazing light systems, the selection of each single LED is even more important in order to avoid colour

variations between different parts of the lit surface. To guarantee perfect uniformity and a MacAdam step of <3 , we assess LEDs at 1/4 of a BIN.

Every single Linealuce luminaire is 100% tested to guarantee its reliability. The product is subjected to a series of specific thermal cycles in a climatic chamber to stabilize the seal before being pressure-tested.

100% Tested.

Maximum reliability and complete respect for the environment.

The Linealuce production process follows eco-design values. The high quality materials and components used have been carefully researched to ensure long-lasting reliability. Given the context in which they are typically installed, these products require a tried and tested construction. Linealuce is a georesponsive luminaire that can adapt to different variations in

temperature without affecting its performance. The pretreatment and painting processes contain no chemical elements that are hazardous for the environment, and they boast the most highly advanced technology available. To guarantee a high standard of long-lasting reliability the product is kept in a climatic chamber for five days before being pressure-tested.

Extreme weather conditions

Linealuce operates correctly even at extreme temperatures (-30° +45°).

-30°

+45°

Atmospheric agent protection

Two-stage pretreatment: one is fluorozirconation, while the other is a deposit of nano-technological polymer. Plus two coats of liquid paint.

Grazer**

Linealuce Mini

The smallest and most versatile system.

The Linealuce line is as compact as possible, and the Mini version, that is only 37 millimetres wide, is the smallest. This luminaire can be either surface-mounted or recessed. It is available in 5 different lengths and adapts easily to any project.

Linealuce Mini is a byword for versatility. The chance to choose from different powers (W/lm) for the same lengths, latest generation LED efficiency and high performance optics, all allow this luminaire to be installed in a wide range of contexts.

Constant luminous flux

Up to 27 metres of light with a single power line and no voltage drops.

Linealuce Mini can be installed individually or in a continuous line. Conventional linear systems with a remote transformer have difficulty maintaining a constant light flux when connected in long continuous lines. Those using a remote driver cannot power a light line longer than 5-6 metres with power LEDs.

We have solved these problems by inserting in each product an exclusive electronic circuit that stabilizes the LED operating current and avoids voltage drops due to connection distances. So now a single power line can provide 27 metres of perfectly uniform light.

Easy and rapid installation

Linealuce Mini general features

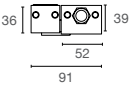

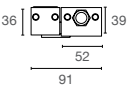

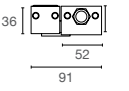

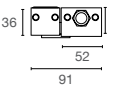

- Wall, ceiling and balustrade-mounted using accessory brackets.
- Extruded aluminium body, with die-cast zamak end caps complete with silicone seals.
- The top of the optical assembly is closed by a 3 mm thick transparent glass screen, fixed with silicone.
- The product is supplied with a

- single nickel-plated brass cable gland PG9 and a PVC outlet cable. For the electrical connection there is an IP68 linear connector and an IP67 junction box with quick-coupling terminals.
- Electronic ballasts to be ordered separately.
- Dimmable monochrome and RGB versions: $V_{in}=48V$ dc

- electronic ballasts to be ordered separately, DALI or DMX-RDM internal drivers, contained in special extruded aluminium side boxes, with zamak die-cast end caps complete with silicone seals, nickel-plated brass cable glands PG13.5 and outlet cables.
- Luminaire designed for pass-through wiring.

- All external screws are made of A2 stainless steel.

Linealuce Compact.

Performance that leaves its mark.

Linealuce Compact creates a linear luminous band that is designed to light indoor and outdoor surfaces evenly. It can be either surface-mounted or recessed, and features such as a choice of different powers (W/m) for the same lengths, latest generation LED

efficiency and high performance optics, all allow this luminaire to be installed in a wide range of contexts. Its versatility and extraordinary performance also mean that Linealuce Compact adapts easily to social, architectural and technological progress.

Linealuce Compact

75
millimetres

Linealuce Compact Recessed

101
millimetres

The new wiring system enhances the luminaire's design. The box and connectors are hidden from view. So a line of light is created with no interruption and one single light design element.

Easy set-up.

Maximum reliability over the entire lifetime.

Linealuce Compact is fitted with fast, easy pass-through wiring, so the product does not need to be opened during installation. This solution has a number of important benefits: it saves time and installation costs, increases reliability and the life

of the system, and eliminates the risk of dirt and humidity within the product. The junction box also establishes a minimum distance between the product and the wall to ensure the luminaire is fitted in the optimum position for the optics.

One single light design element

The junction box and connectors are hidden from view.

Simplified Wiring

Thanks to rapid, toolfree connections with pre-assembled cables.

Distinctive features.

The Linealuce Compact recessed and surface-mounted versions have unique features that offer different types of performance with the same design.

Linealuce Compact

Continuous line installation

With no need for interruptions.

Ballasts

Drivers and DMX or DALI interfaces are built into the body of the luminaire.

Louver accessory

Conceals the lighting elements.

Design

Personalized design with an irregular trapezium profile and surface flush glass to stop dirt build up.

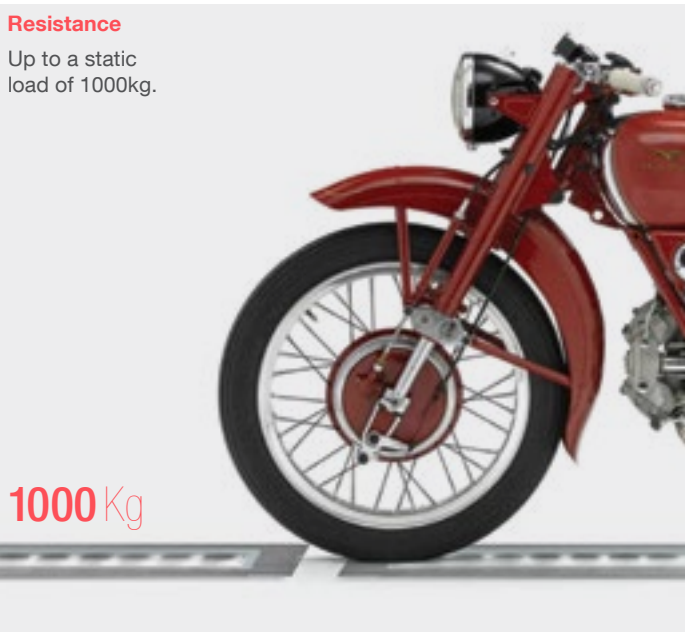

Linealuce Compact

Linealuce Compact Recessed

Resistance

Up to a static load of 1000kg.

Safety

Versions with anti-slip glass offer pedestrians maximum safety.

Temperature

The product's surface temperature never exceeds 40°.

Visual comfort

Optics with a high photometric precision emission guarantee greater visual comfort.

Optics WG WG WGS WG (RGB) WGS (RGB) WG (RGBW) WG (WNC)

General Linealuce Compact features

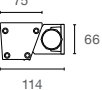

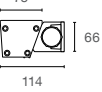

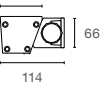

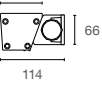

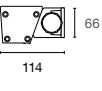

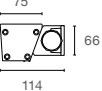

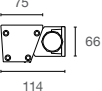

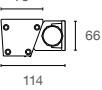

- Wall, ceiling and balustrade-mounted using accessory brackets.
- Extruded aluminium body, with die-cast aluminium end caps complete with silicone seals.
- Side box for control gear in PPS.
- The top of the optical assembly

- is closed by a 3 mm thick transparent glass screen, fixed with silicone.
- The side box is supplied with a double male/female connector with rapid 3-pin coupling for pass-through cabling and an end cap on one side.

- LED versions available with dynamic RGB and WNC (White Tuning) colour changes compatible with light management systems.
- Dimmable monochrome and RGB versions complete with electronic ballast + internal

- DALI or DMX-RDM driver.
- Luminaire designed for pass-through wiring.
- All external screws are made of A2 stainless steel.

General Linealuce Compact features

- Pavement, wall and ceiling-recessed luminaire, designed to use LED lamps.
- Consists of a body and outer casing for installation (to be ordered separately).
- Extruded aluminium body closed at the top by a semi-acid etched or anti-slip glass screen secured with silicone; die-cast

- aluminium end caps complete with silicone seals; and an aluminium outer casing with technopolymer caps.
- LED versions available with dynamic RGB and WNC (White Tuning) colour changes compatible with light management systems.
- Dimmable monochrome and RGB versions complete with

- electronic ballast + internal DALI or DMX-RDM driver.
- Luminaire designed for pass-through wiring.
- All external screws are made of A2 stainless steel.

System composition

Linealuce is fitted with two connectors and a pass through cable allowing a series of modules to be connected to the same power line. This eliminates the cost of additional junction boxes and reduces installation time while assuring system reliability. The power can be supplied either through the female or male connector.

Static System

Female connector

Static System

male connector

Dimmable and RGB system and WNC, RGB, RGBW, WRGBW

For each length Linealuce there is a suitable accessory cable.

1. Multi-pole cable with end connectors

2. pole pair of connectors (male + female)

3. pole female connector

4. pole male connector complete with covering cap for unused male connectors - IP66

5. Y-coupling with 5 poles IP68

6. Cap for connectors + terminator resistance 120 Ω

Wall, surface or ceiling application

Ceiling application

Wall application horizontal/vertical

(*) The distance d of the WALL GRAZING optics depends on the surface

If an outer casing is used it may be wise to lay a water drainage base. If this is not possible or the luminaire is installed on a wall, fit a pipe to drain the water.

System composition

Linealuce recessed is fitted with a wiring system including a BOX or output cables that allow a series of modules to be connected to the same power line. This eliminates the cost of junction boxes, reduces installation times and guarantees system reliability. The power supply can be run down either side of the connection.

Static System

Dimmable and RGB system

1. 5-pole connector IP68

2. Y-coupling with 5 poles IP68

3. Cap for connectors + terminator resistance 120 Ω

Underscore Grazer highlights the volumes of the of the surfaces by creating dramatic or reassuring light and shadow effects depending on the material of the wall illuminated.

Underscore Grazer.

Lines of light that define and organize space.

The perfect fusion of light and architectural walls. Underscore Grazer creates a diffused light that emphasizes the materials of the surface in question. The option of using corner accessories allows designers to define any perimeter, even those with highly complex shapes. The luminaire produces a grazing, continuous light, and the source remains hidden so the effects are even more startling.

Architectural features that may seem ordinary during the day, come alive and shine at night, as the light seems to wrap them in a special, new coat. So even the simplest of buildings can become a work of art, and the most straightforward geometry can shape a canvas on which to creatively highlight architectural character.

Underscore Grazer

Technical features

01
WHITE

Illumination height

Grazer creates even, consistent illumination and a light effect with no shadows.

General Underscore features

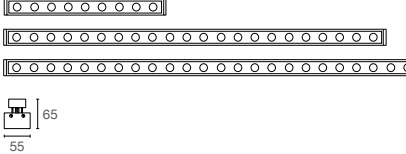

- A linear system for lighting walls vertically.
- Niche application via a specific aluminium profile for false ceilings, and completed with internal and external cornerpieces to ensure the system fits the shape of the wall
- Lighting modules in 3 lengths, complete with DALI dimmable control gear supplied with input and output connectors for continuous line installations
- High performance wall grazer optics

IP20

System set up

- 1 End cap
- 2 Aluminium perimeter profile L=1000
- 3 90° internal corner profile
- 4 Connector with cable for initial connection
- 5 LED Wall Washer module L=528
- 6 Connector for pass-through connections

Conditions of sale

General Conditions

iGuzzini reserves the right to discontinue any products from its collection at any time whatsoever and without prior notice, without prejudice to the essential characteristics of the models described; iGuzzini also reserves the right to make technical and photometric modifications as well as to change any parts, details or finishes deemed suitable for improvement purposes or due to construction and commercial requirements. Goods travel at the customer's risk and peril, even those sold franco domicile. Any exporting of goods purchased must be authorised in advance and in writing by iGuzzini. The pole + product compositions shown in the catalogue are merely indicative, in particular as concerns the wind-thrust stability test, which should be

performed based on both the characteristics of the location and the regulations in force. For installation purposes refer exclusively to the conditions described in the instruction sheet included in the product package and/or on the Web site www.iguzzini.com. The data and information contained in these pages is to be considered indicative and non-binding. iGuzzini reserves the right to cancel, alter, or rectify the data and information for legal and/or technical and/or technological reasons. iGuzzini, in any case, will try to do everything in its power to ensure that all the data and information herein are correct and up-to-date when printed, yet shall not be held accountable if, regardless of various proofreads, there should be inaccuracies and/or errors because

of, and not limited to, legal or technological updates, use of software that is different from that utilized by iGuzzini, and/or issues that are out of Guzzini's control. For information and updates on compatibility of the light sources with the fittings illustrated in this catalogue, reference must be made to the instructions sheets that can be downloaded from the e-catalogue at www.iguzzini.com

These conditions shall apply from 01.01.2015

Safety seals

In order to guarantee operation and safety, public boards have established specific standards which protect the end user against risks. iGuzzini illuminazione in line with its policy of quality and safety, makes products which comply to these standards. The non-electrified components of the system (such as cover plates, couplings, etc.) cannot be considered as lighting fixtures and therefore are not included in the standards

used by the Quality Seal Institutes for their classification. However, all the components of the certified systems have been tested by the said Institutes to ensure compatibility and safety. The luminaires in the iGuzzini collection are designed in conformance with European standards EN 60598-1 and more specific ones, therefore meeting these requirements in full, including the maximum temperatures allowed and considering the ambient temperature to

be 25°C. Please contact the company in case of countries or applications with especially severe temperature requirements (i.e. fluorescent luminaires in low temperature areas, LED luminaires in high temperature areas, etc.) or different microclimatic features (i.e. swimming pools, explosion-risk zones, etc.). For the correct installation of the luminaires, always consult the instruction sheet provided with the product.

Guarantee

iGuzzini warrants that their products are free from any defect in manufacturing and/or material in case of proper use, for a period of five years from the date of the invoice prior to online registration at www.iguzzini.com and acceptance of specific conditions. In any case, iGuzzini recognises the warranty rights foreseen by the law.

Information

For enquiries, to report issues and request assistance, contact the reference company for your geographical area, indicated at www.iguzzini.com.

Notes

For the ENEC mark for individual product codes, see the download area for the online catalogue products.[iguzzini.it](http://www.iguzzini.it)
