SCANDIA
MANUFACTURING

INTRODUCTION

Scandia's traditional Finnish Electric Sauna Heaters are manufactured for use in a wood sauna room. Our sleek, compact, and 100% stainless steel design creates a heater that's as beautiful as it is functional. These units also incorporate an elevated rock tray to prevent damage during the application of water and utilize a convection-style airflow. All Scandia electric heaters are wall-mounted, wire directly into the building, and include wiring connections and leads rated for high-temperature applications.

SPECIFICATIONS AND MODELS

- High-quality & extremely durable. Made from 22-gauge brushed stainless steel
- Heats from 140 to 1,680 cubic feet (depending on model)
- Unique, solid steamer tray design allows for water pouring while keeping the heating elements dry and protected
- UL Listed
- Built-in thermal cut-out protects against overheating
- Includes sauna rocks, installation instructions, 60-minute timer and thermostat sensor wall cover
- Features an unprecedented 10-year warranty on the shell and one-year warranty on parts.
