

# FAQ (Frequently Asked Questions)

## Which setting should I use for which strain?

**If the CeeBD / TeeHC ratio is about 1:1, use the setting for what you care about most.**

**If your strain is CeeBD dominant ( $\geq 10\%$  CeeBD), use the CeeBD settings: CeeBD Decarb and CeeBD Oil.**

**If your strain is not CeeBD dominant, use the general settings: Decarb and Oil.**

CeeBD settings (CeeBD Decarb and CeeBD Oil) guarantee full activation and full infusion of CeeBD. However, there is a chance that a tiny percentage of TeeHC will be oxidized into CeeBN.

The general settings (Decarb and Oil) guarantee full activation and infusion of TeeHC and avoid oxidizing TeeHC into CeeBN. However, reduced cooking time might lead to a tiny percentage of CeeBD-a remaining in your final product.

## My strain has both CeeBD and TeeHC, should I decarboxylate twice with both settings?

**No. Decarboxylate only once.**

**We recommend:**

**Use CeeBD Decarb and CeeBD Oil functions, if your strain contains more CeeBD than TeeHC.**

**Otherwise, use the general functions: Decarb and Oil.**

When you use the CeeBD settings for your herb:

>> You get all the CeeBD and TeeHC activated and infused, maybe also a bit CeeBN if your strain contains high TeeHC.

When you use the General settings for your buds:

>> You get all TeeHC with no CeeBN, but a bit of CeeBD-a remains, if your strain contains high CeeBD.

## Can I decarboxylate concentrate/extract in POT by NOIDS?

**Yes!**

Tip:

1. Put your extract in a mini silicon container,
2. Cover the container with tinfoil,
3. Put the container directly in the Glass for decarboxylation.

## Can I use the same herb to first make CeeBD oil and then TeeHC oil?

**No.**

You cannot separate CeeBD and TeeHC with POT by NOIDS.

CeeBD and TeeHC decarboxylate and infuse the same time, but the chemical reactions for CeeBD and TeeHC decarboxylation has different rate constants. TeeHC decarbs about twice faster than CeeBD.

## How long does it take POT by NOIDS to cook?

**POT by NOIDS is unique with its dynamic heating algorithm.**

**The thermal detector monitors and adjusts the temperature and cooking time in real-time. The temperature fluctuation is tightly controlled to  $\pm 1^\circ\text{C}$  ( $1.8^\circ\text{F}$ ). As a result, the total cooking time varies according to the room temperature, the volume of the herb, and the moisture content of the herb.**

For TeeHC Dominant strains:  
Decarb: 1h 30 min to 4h

\* TeeHC Decarb requires higher temperature, hence the cooking time varies greater. For other functions (CeeBD Decarb, Oil, CeeBD Oil) the time variation is not big.

The less herb you decarb, the longer it takes. If you decarb less than 10 grams of TeeHC herb, here is the hack to reduce the total cooking time:

Cover the Glass with the Filter set, push the filter down to 1cm above the herb. By doing so, you can reduce 30 mins to 1h 30min cooking time.

Oil  $\approx$  2h 30min

## How much butter or oil can I make at one time?

**Max. 250 ml**

About the volume of a standard can of beer.

## How much dry herb can I cook at one time?

**Grind: Max. 25g**

**Whole: Max. 15g**

## How potent can my infused oil be?

**It depends on:**

1. How strong your strain is
2. How much herb you cook
3. How much oil you use

Use our potency calculator. Check it out on the homepage of our website.

If you want to make oil very high potency, use evaporation function to make concentrate first, then add the concentrate into oil or butter.

## How to store infused oil, butter and tincture?

- **Avoid oxygen**
- **Avoid daylight**
- **Avoid excessive heat**

We are developing perfect storage utensils exactly for these purposes.

## Which oil should I use for infusion?

**Any edible oil or butter.**

### **We recommend:**

Olive oil for ingestion and cooking

Butter for baking

Coconut oil for skin

\*If you prefer other tastes, go ahead and enjoy!

## Can I cook other herbs and spices with POT by NOIDS?

### **YES YOU CAN**

But only infuse in oil, not in water. POT by NOIDS is born for perfect oil infusion. Water would boil in POT and eventually escape in the air.

## Can I wash The Glass of POT by NOIDS in my dishwasher?

### **YES**

The Glass is designed with two goals:

1. Detect any tiny change in temperature inside
2. Allow dishwasher to clean it.

## What should I know about the herb to use POT by NOIDS?

### **You need to know if your herb is CeeBD dominant or TeeHC dominant**

POT knows the time, temperature, and what to do with different strains. You just need to know if your strain is CeeBD dominant or not, POT will take care of the rest.

### **Which oil should I use for infusion?**

**Yes!**

And return will also be taken care of by NOIDS. Buy from our website, you will be treated exactly the same as our EU customers.

### **Can I use POT by NOIDS on a 110 V power supply?**

**Yes, you can.**

POT by NOIDS can work on a power supply with a voltage between 110 V - 240 V.

### **Is it legal to buy POT by NOIDS?**

**Of course**

It is a herb cooker.

### **I don't find the answer to my question, what to do?**

**It is our job to answer your questions.**
