

## FIX HARD, COMPACTED CLAY SOIL

### Gardner & Bloome Soil Building Compost

will make cultivation easier, increase moisture absorption and retention and improve soil aeration in every type of garden soil, whether new or already established.

---

### What is Soil Building Compost?

Soil Building Compost is a nutrient-rich, all-natural organic compost containing forest humus, chicken manure, bat guano, worm castings kelp meal, gypsum and more.

---

How to use **Gardner & Bloome Soil Building Compost** to improve soil drainage and aeration in **hard clay** or compacted garden soil:

- Spread a 2-3 inch thick layer of Soil Building Compost over the planting area. (See coverage table on the package.)
- Using a spade, hoe, or rototiller, mix this material thoroughly with the top 5-6 inches of soil.
- Repeat this process one or more times until the soil reaches the desired texture.
- Rake the soil smooth and level.
- Water thoroughly before and after planting.
