

Wolffepack®

Product features and technical specification of the Wolffepack® 'Metro'

Wolffepack® is the revolutionary backpack that swings your stuff to the front but stays strapped to your back. It allows you to swing the pack from its normal position on your back swiftly round to your front in one simple and secure action, without adjusting the shoulder straps.

It incorporates the unique and patent-pending **expetoSYSTEM®**, an orbital trapeze technology that frees the pack to swing around your body using super-strong cords.

A British invention, the Wolffepack®'s unique design:

- gives better and quicker access to stuff inside the pack
- offers more comfort by avoiding bumping fellow passengers and 'backpack rage', and by allowing the user to sit comfortably with the pack still on
- provides greater security; it can be securely and comfortably hooked on the front of the body where valuables are in sight

Technical Specification of the Wolffepack® 'Metro':

Capacity: 22 litres approx
