

NEW
for 2022

The Maxi 24 Advance and Maxi 24 EX incubators

Higher capacity, lower prices.

Since their launch, the Maxi II incubators have been very successful and highly rated by their users. The all-round visibility that these machines offer, together with ease of use has made them very popular with customers worldwide.

Following feedback from experienced Maxi users we realised that we could increase egg capacity in these machines, so the **new** Maxi 24 Advance and EX models now hold 24 hens' eggs. The single-ring egg disk has been replaced with an innovative 'quadrant system' so the user can now incubate eggs of different sizes at the same time.

This increase in egg capacity for hens' eggs is achieved by having the eggs in two rings which means the eggs in the inner rings turn through a smaller angle than the outer. Tests and experience show that this has no effect on hatch rates.

'This is the best incubator I have ever bought. I have had amazing hatch rates from it and it's so easy to clean and use. The incubator construction is of superb quality and is what you expect from a Brinsea product.' Daniel M

NEW for 2022

The Maxi 24 Advance and Maxi 24 EX incubators

Higher capacity, lower prices.

For small eggs, such as quail

Ideal for 24 hens' eggs

For large eggs, such as goose

Quadrants of different sizes can be used

The egg quadrants come in four variants for different sized eggs; quail, hen, duck and goose. The Maxi 24 Advance comes with the hen and duck quadrants supplied as standard, the Maxi 24 EX has the quail, hen, duck and goose quadrants supplied. These quadrants simply clip together and can be mixed and matched to allow the user to incubate eggs of different sizes.

The Maxi 24 Advance turns the eggs automatically and provides digital control of temperature, including alarms to warn of power failure, incubation temperature fluctuations, periodic cooling option and Brinsea's new patented room temperature alarm. The 24 EX model adds fully automatic and highly accurate humidity control. The new mix and match egg quadrant system makes the Maxi 24 incubators the ideal choice for those looking to incubate eggs of various sizes.

Brinsea are always looking to provide the best products at the best value for their customers. Following improved production efficiency, we are delighted to announce that the new Maxi incubators are available at new, lower prices.

'The automatic settings in the EX take all the guess work out of hatching, this machine is so easy to use.' Cheryl B
