DAPHNE

Plant Daphne in semi shaded spots in the garden, or in areas with a little afternoon sun. Avoid the full summer sun. Plant in a frost-free area or ensure frost protection over colder months and protect from coastal winds. They prefer an acid or lime free soil that is easily crumbled and well drained.

If planting in the ground, tone up the soil by adding some good compost. Add ican Real Blood and Bone to the soil at planting time and top dress with Tui Acid Fertiliser. Water in well.

In pots and containers, use a top-quality potting mix which will already have plant food in it. Supplement this with a slow-release fertiliser such as ican Slow Food annually and liquid feed with ican Fast Food fortnightly.

Daphne like moist or damp conditions, especially over summer. They do not like wet feet however, so avoid planting in heavy clay soils. Do not leave to dry out over summer months.

VARIETY	ORDERED		DESCRIPTION
ALBA Small Grade 1 Year	20MIL-3L 15MIL-4L 20SHA		Evergreen, neat & compact bush. Clusters of pure white flowers in spring. Rich glossy foliage. Delightfully fragrant. Plant in partial shade. Grows 1m x 1m

ican 24-Plus Slow Food. A two year slow release fertiliser used by home gardeners and professionals. Ideal for feeding all trees and shrubs, including roses, conifers, citrus & fruit trees, as well as orchids, perennials, and bulbs. Nutrient release is triggered by moisture and plant growth, becoming available approximately 48 hours after contact with moist soil. ican Slow food is safe, with no risk of burning when used according to directions. There is no build up of soluble salts. It does not leach with water run-off. Formulation of N.P.K 7.7.9, plus trace elements and minerals.

ican Fast Food. Contains the necessary nutrients for healthy plants. Ideal for all indoor and outdoor plants including: vegetables, flowers, roses, shrubs, ferns, palms, house plants or any plants in pots. Simply mix with water and pour on! Mix one teaspoon (5ml) of ican Fast Food per litre of water. This solution can be used as a foliar spray. Formulation of N.P.K. 9.4.5, plus trace elements and minerals.

Real Blood & Bone. Nitrogen (N) – 10%. Phosphorus (P) – 5%. Potassium (K) – 0%

ican Real Blood & Bone contains almost double the nitrogen, the major ingredient, because nothing has been taken out and no fillers added. It is real blood and bone. Fast acting, but also releases nutrients over 3-4 months. Safe to use and perfect when planting vegetables, flowers, shrubs and trees. As well as feeding plants, it improves soil structure and promotes earthworm activity and microorganism activity in the soil.
