

AUTOTETHER

The Autotether boating safety device is an unobtrusive wireless unit that clips into the ignition switch. It operates via a transmitter that sends radio waves to a receiver connected to the boat's ignition. When the sensor is submerged in water, the signal between the transmitter and the receiver is instantly broken, and Autotether activates the ignition kill switch.

The unit can accommodate a total of four wireless sensors. Any passenger wearing the sensor who falls overboard will signal the boat to stop with the sound of an alarm. For added safety, should the operator or a passenger notice a potential danger, the red alert button located on the sensor can be pushed to sound an alarm and stop the boat.

Autotether can be transferred from boat to boat with the proper clip. It also can be used to monitor a water skier or a tuber with the alarm only and not shut off the boat if he or she goes in the water.

The kit includes one ignition switch clip, one transmitter, two personal sensors and two AAA batteries and costs \$295. Additional personal sensors cost \$69 apiece.

ULTRA ANCHOR

The Ultra Anchor from Quickline has a unique, rugged and strong design that features a very low center of gravity that ensures it consistently lands upright

on the seafloor. Its pointed, curved tip, hollow shank and lead-filled concave base allows it to set in virtually all bottom conditions, penetrating even the toughest surfaces quickly and ensuring extra-strong holding power.

The anchor is rust resistant and its fully enclosed lead base eliminates any electrolysis issues and concerns. The anchor's anti-foul bar ensures that the anchor rode will not tangle on the shank or dislodge the anchor from its set position. The harder the rode pulls,

the more deeply the anchor digs in. The Ultra Anchor is also an eco-friendly solution; typically setting within its own length, it reduces bottom environment impact, and its high polished surface resists mud and debris sticking.

The Ultra Anchor is available in 15 sizes ranging from 18 to 440 pounds and has a retail price range of \$900 to \$15,000. Additional sizes are manufactured to order.

SLIPKNOT ROPE STOP

SlipKnot™ adjustable rope stop is an egg-shaped device that can be used to create a knot, grip, stop or spacer.

SlipKnot is molded from weather-resistant nylon, has ribbed construction for a sure grip and can be used with braided or stranded lines to create a secure but easily adjustable knot or stop. Featuring three sizes that fit 3/8-inch, 7/16-inch and 1/2-inch rope, they come in clear plastic clamshell three-packs of each size and an assortment of all sizes.

Designed to feed a rope through it or disassemble and attach in the middle of an existing rope, SlipKnot grips by holding one side and twisting the other. An internal mechanism (patent pending) grips the line with up to 200 pounds of holding power, depending upon the rope's construction. They are offered in three colors: orange, safety yellow and marine blue.

A three-pack of Stafford's SlipKnot sells for a suggested retail price of \$24.95.
