## Mobile Power Center (MPC) Quick Start Guide

**CHARGING:** We have shipped your new Mobile Power Center (MPC) with a state of charge at roughly 60%. As a result, you will need to fully charge the MPC to utilize its full capacity.

### Charging Instructions:

1. Plug the included “Charge Connector” into your AC adapter to create a male connector tip.
2. Plug the AC adapter’s newly created male tip into the **red** colored port labeled “Input” on the side of the MPC.
3. Plug the AC adapter into any standard wall outlet to begin charging. When all 4 blue indicator lights on the side of the MPC remain solidly illuminated, charging will be complete. Always disconnect the AC adapter after the MPC is fully charged.

**WARNING: Never charge more than 1 MPC from a single AC adapter (i.e. do not “dual charge” using a Y-Cable). Doing so will damage the AC adapter.**

**CAPACITY CHECK:** To check the current state of charge of the MPC, quickly press and release the power button and view the 4 blue indicator lights on the side of the MPC. Capacity remaining corresponds to the number of lights that illuminate:

1 Light = 0 - 25%

2 Lights = 25 - 50%

3 Lights = 50 - 75 %

4 Lights = 75 - 100%

## Mobile Power Center (MPC) Quick Start Guide Continued

**LIGHTING:** When powering LED lights using the MPC, please proceed as follows:

1. Make sure “on/off” switch located on light fixture power cord is set to the “on” position.
2. Plug light fixture power cord into the **green** colored port labeled “output” on the MPC.
3. Press and hold power button on the MPC for roughly 5 seconds to engage power.

**Please Note:** LED lights can run at any voltage setting on the MPC. However, for the longest runtimes, please slide the “voltage selector to 12V.

For detailed illustrated instructions on charging & lighting operation, and important storage & handling information, please visit the MPC product page on our website at:
