

# MUSIC THE KLIPSCH HERESY:

The biggest sound in a small speaker is two-thirds Klipschorn at less than half the price.

Klipsch Heresy is one of the most efficient small speakers in the world. Only one watt of power will deliver 96 dB of sound pressure four feet into your room and it can take 100 watts if your ears can. Response range is from 50 to 17,000 Hz plus or minus 5 dB.

This lowest priced Klipsch Heresy comes in unfinished birch plywood for exceptional durability, so if you want great sound without the furniture finish, this is the one for you.

The Klipsch Heresy cabinet is shown here in beautiful, hand-finished walnut. Built to the highest quality construction standards in the industry, you can also choose oak, teak, rosewood, ebony, zebra wood and other exotic wood veneers.

The Klipsch Heresy is a sound investment because, unlike every other aspect of today's computer hi-fi systems, it will not be obsolete ten years from now.

In 1957 Paul Klipsch designed a small loudspeaker that utilized the same tweeter and mid-range driver as the legendary Klipschorn. He added a 12" woofer and maximized the cabinet volume for exceptional bass response. Until that time, Klipsch had built only corner speakers and the new design was for "against the wall" placement. When he described this accomplishment to a sales representative, the man said it was "heresy" to put so much Klipschorn in such a small speaker that didn't even require a corner.

Because of its high efficiency, the Klipsch Heresy doesn't require expensive, high-powered amplifiers to reproduce the full bandwidth of dynamic sound. This helps you afford a better cartridge, turntable or tape deck.

For tonal detail, definition, imaging, transient response and durability, the Klipsch Heresy has no equal in its size. It will put you front row center, feeling the thunder of the bass, the impact of the drums, and the exhilaration of each crescendo.
