警告:

1. 池請回收

如果更换錯誤電池會產生爆炸 請以相同或同型電池更換使用,

警告使用者:這是甲類的資訊產品,在居住的環 境中使用時,可能會造成射頻干擾,在這種情況 下,使用者會被要求採取某些適當的對策。

セキュリティ基準(新規則第34条の10)

電気通信事業者(移動通信会社、固定通信会社、インターネットプロバイダ等) 「本製品は の通信回線(公衆無線LANを含む)

に直接接続することができません。本製品をインターネットに接続する場合は、必ずルータ等 を経由し接続してください。」

IMPORTANT:

The NVR also supports the VIVOCloud Retail app. Please refer to the VIVOCloud Retail app User Guide for details.

IMPORTANT:

The NVR should be properly grounded.

The max. power of all PoE ports is 180W. The max. power of each PoE port is 30W.

Revision History

- * Rev. 1.0: Initial release
- * Rev. 1.1: Revision based on firmware 4.3

- 1. Deleting a volume removes your recordings. You need to back up your recordings before deleting a volume.
- 2. If running firmware revision 4.2.0.6, users cannot downgrade to earlier firmware (e.g., 3.x).
- 3. Delete a volume erases the recordings in it.
- 4. The lift on the 16TB volume limitation also applies to USB3.0 texternal storage.

Some low quality Ethernet cables with smaller core diameter can seriously reduce the transmission rate. Use CAT5e or CAT6 cables with a wire gauge of 24AWG for NVR's uplink port. A thicker core 24 AWG network cable can offer less resistance than a 26 AWG or 28 AWG network cable.

Use shielded cables in high noise environments where cross talk and EMI can occur.

MPORTANT:

Due to the limitation of system resources, the fisheye's all dewarp modes (including 10/1R/103R/108R) can only take place in a 1x1 view cell, for one fisheye camera.

The onboard PoE are end-span ports.

Avoid the following with the use of battery:

- 1. Replacement of a battery with an incorrect type that can defeat a safeguard (for example, in the case of some lithium battery types);
- 2. Disposal of a battery into fire or a hot oven, or mechanically crushing or cutting of a battery, that can result in an explosion;
- 3. Leaving a battery in an extremely high temperature surrounding environment that can result in an explosion or the leakage of flammable liquid or gas; and
- 4. A battery subjected to extremely low air pressure that may result in an explosion or the leakage of flammable liquid or gas.

1. The NVR is only to be connected to PoE networks without routing to outside plants.

2. For PoE connection, use only UL listed I.T.E. with PoE output.

IMPORTANT:

- 1. Installation and maintenance service should only be performed by qualified technicians.
- 2. At all times, maintenance of the inside of the chassis should be carried out after all power is disconnected.

NOTE:

- The following are the limitations for web access using the non-IE browsers:
- 1. Playback: fast forward, back forward, next frame buttons are not available.
- 2. Snapshot and Auto screen ratio not available on Safari.
- 3. Web browsers supported:
 - Chrome v68.0.3440 and later official version
 - Firefox v61.02 and later official version
- 4. OSes supported
 - Windows
 - Windows 7, 64 bit
 - Windows 10
- 5. Minimum PC hardware requirements
 - 1. CPU: Intel i5 4th generation and higher
 - 2. RAM: 4GB and higher

NOTE:

1. The NVR is only to be connected to PoE networks without routing to outside plants.

2. For PoE connection, use only UL listed I.T.E. with PoE output.

NOTE:

Use the NVR only with a DC power supply that is UL listed certified. The power supply should bear the UL listed. The power supply should also meet any safety and compliance requirements for the country of use.

- 1. La NVR ne doit être raccordée qu'à des réseaux PoE, sans routage vers des installations extérieures.
- 2. Pour les raccordements PoE, utilisez uniquement un équipement de TI homologué UL, avec une sortie PoE.

REMARQUE :

n'utilisez la NVR qu'avec un bloc d'alimentation CC homologué UL, ainsi qu'avec une alimentation certifiée. Le bloc d'alimentation doit porter les indications d'homologation UL. Il doit également répondre aux exigences en matière de sécurité et de conformité relatives au pays d'utilisation.

Read Before Use

The use of surveillance devices may be prohibited by law in your country. The Network Camera is not only a high-performance web-ready camera but can also be part of a flexible surveillance system. It is the user's responsibility to ensure that the operation of such devices is legal before installing this unit for its intended use.

It is important to first verify that all contents received are complete according to the Package Contents listed below. Take note of the warnings in the Quick Installation Guide before the Network Camera is installed; then carefully read and follow the instructions in the Installation chapter to avoid damage due to faulty assembly and installation. This also ensures the product is used properly as intended.

The Network Camera is a network device and its use should be straightforward for those who have basic networking knowledge. It is designed for various applications including video sharing, general security/surveillance, etc. The Configuration chapter suggests ways to best utilize the Network Camera and ensure proper operations. For creative and professional developers, the URL Commands of the Network Camera section serves as a helpful reference to customizing existing homepages or integrating with the current web server.

NOTE:

The operating system and management software are installed on a flash memory mounted on the main board. Except for running the plug-ins for the onscreen control on a web console, there is no need to install software.

Symbols and Statements in this Document

INFORMATION: provides important messages or advices that might help prevent inconvenient or problem situations.

NOTE: Notices provide guidance or advices that are related to the functional integrity of the machine.

Tips: Tips are useful information that helps enhance or facilitate an installation, function, or process.

WARNING! or **IMPORTANT**: These statements indicate situations that can be dangerous or hazardous to the machine or you.

Electrical Hazard: This statement appears when high voltage electrical hazards might occur to an operator.

Chapter 1: Hardware Installation and Initial Configuration

Introducing the Network Video Recorder

VIVOTEK's ND9442P/ND9542P is an H.265 Linux-based standalone NVR with embedded PoE. Equipped for up to 16-CH or 32-CH network cameras. The NVR supports 16x 802.3 at/af PoE ports. The NVR displays the PoE power information, providing for a more convenient and smarter installation.

The NVR also supports remote and mobile access via VORTEX Connect, VIVOCloud and iViewer apps for both iOS and Android handheld devices. The VIVOCloud app provides instant push notification and direct video playback functions when triggered by an alarm notification, providing users with a flexible and intelligent NVR for seamless use in small to medium sized video surveillance applications.

With H.265 compression technology and embedded with 4 HDDs providing up to 32TB of storage space, the NVR offers greater than 30% more recording capacity than H.264 systems. This advancement provides users with more storage space for longer durations of video recording.

For high-quality and detailed images, the NVR supports a maximum network camera resolution of 4K,8-Megapixels. Furthermore, the NVR supports VIVOTEK's fisheye network camera "Fisheye Dewarp" function via a local or web console, which provides multiple de-warping modes in live view and playback, ensuring the correct angle of video view and detailed information for flexible usage. Lastly, to quickly and intuitively find any target event, the NVR is equipped with the "meta data search" function, which provides a glimpse of past recordings over an intuitive timeline.

The NVR supports HDMI and VGA local video output, so users can control the GUI OSD interface via mouse & keyboard, eliminating the need for a separate PC to search video or playback from the NVR. Additionally, the intuitive and friendly VIVOTEK GUI design gives users a smooth control experience.

Special Features

- 802.3at/af compliant PoE ports x16, single port 30W max. (total max. 180W)
- Runs on embedded Linux
- 1 x HDMI and 1 x VGA for local display
- 4 x HDD positions
- 1 x Gigabit RJ45 Ethernet port for uplink;
- 3 x USB Ports (1 USB 3.0 and 2 USB 2.0)
- 432.6 (W) x 421.65 (D) x 66 (H) mm.
- 4-CH Live View & 4-CH Synchronous Playback (web console)
- H.265 / H.264 / MJPEG

- PTZ Support
- Snapshot / Export Media
- Digital zoom Video Control
- VORTEX Connect and VIVOCloud for effortless access from cell phones using a QR code
- Terminal block pins for DI/DO connection.
- Configuration Backup / Restore
- Compatible with VIVOTEK VSS Central Management Software*
- Integration with VIVOTEK Network Cameras
- VIVOTEK iViewer Support (iOS/Android cellphone/hand-held devices)

*The VIVOTEK VSS Central Management Software is not included in the package.

The NVR can be part of a Social Distancing solution. Below is a short introduction.

Facing the pandemic outbreak of coronavirus, many governments imposed social distancing methods to reduce the risk of contraction. One method is to control the number of visitors inside a building while allowing people to work or purchase the necessities. Using the 3D people counting cameras at the entrance and exit of a facility, the current occupancy number can be displayed at the store front.

You can configure an occupancy limit and display the message when the limit is reached. Instead of having a security personnel to count the number, the solution can help control the customer traffic.

The solution enables the following:

- Accurate counting of people entering or leaving a facility.
- Displays the occupancy number on an HDMI monitor.
- Business owners can transfer the solution into VORTEX Connect or VIVOCloud Retail solution when social distancing becomes unnecessary.
- Notification to a smartphone app via the VORTEX Connect or VIVOCloud utility.

The Social Distancing package comes with the following components:

- 1. 1 or multiple SC8131 3D counting cameras.
- 2.1 PoE switch
- 3. 1 NVR

* The Ethernet, HDMI cables, and HDMI extenders are user-supplied.

Safety

- Connect the system to an earthed main power outlet.
- Never open the housing of the power supply unit.
- Install and operate the system only in a dry, weather-proof location.
- Observe the following safety factors:
 - Is there visible damage to the system or power cord?
 - Is the system operating correctly?
 - Has the system been exposed to rain or moisture?
 - Has the system been in a long storage under harsh conditions or exposed to unconforming stress?
- The relevant electrical engineering regulations must be complied with at all times during installation.
- Ensure that all maintenance and repair work is handled by qualified personnel such as electrical engineers or network specialists.
- Read this manual before installing or operating the system. The documentation contains important safety instructions about permitted uses.
- The rated AC input is: **100-240V AC, 60-50Hz**; consumption: max. **300W**.
- If a fault occurs, disconnect the power cord from the power supply.
- Do not install the system close to heaters or other heat sources. Avoid locations with direct sunlight.
- All ventilation openings must not be blocked.
- Use only the cables shipped with system or use appropriate cables that can withstand electromagnetic interference.

Chassis Dimensions

1	System power status
2	System status LED
3	Network uplink status/activity LED

1	PoE ports # 1 to #16	6	Audio OUT
2	RJ45 port - GbE uplink	7	VGA
3	HDMI	8	USB port 3.0
4	Audio IN	9	Power socket
5	DI/DO terminal block		

MPORTANT:

The total power budget for the NVR's PoE ports is 200W.

Please ensure the camera PD specification meet the NVR PSE power supply specification before installation.

NOTE:

You can also use the Reset button to restore system defaults. Press and hold down the button for longer than **5** seconds. The system should start restoring defaults.

It is important to leave a clearance of 25cm behind the chassis. The clearance is required to ensure an adequate airflow through the chassis to ventilate heat.

To ensure normal operation, maintain ambient airflow. Do not block the airflow around chassis such as placing the system in a closed cabinet.

Hardware Installation

SATA hard disk(s) are user-supplied. The network video recorder can readily accommodate most of the off-the-shelf SATA hard drives.

1. Attach 4 foot pads to the bottom of the enclosure.

2. Use a Phillips screwdriver to loosen the retention screws on the sides and the back of the chassis. Slide the top cover back, and then remove the top cover.

3. Install HDD brackets to the sides of hard disk drives. Note the orientation of the brackets.

4. The SATA data and power cords are pre-installed.

5. Connect the SATA power and SATA data cables to the hard disk drive.

6. Install the hard drive to the chassis. Note that the screws pass through the through holes on the HDD brackets and secure the hard drive to the chassis. When installing hard drives, their label side should be facing up, and the connector side facing the inside of the chassis.

7. The SATA drive numbering order is shown below.

8. When done, install the top cover.

9. Connect a mouse and keyboard to the USB ports at the front.

Interface Connections

- 10-1. Connect to a monitor using an HDMI cable. VGA is also supported.
- 10-2. Connect CAT5e or better-quality Ethernet cable to the GbE Ethernet port.
- 10-3. Connect USB devices such as, mouse, keyboard, USB optical drive, or USB thumb drive (formatted in FAT format), joystick, or UPS.
- 10-4. Connect external devices, such as sensors, relays, or alarms to the terminal block.
- 10-5. Connect the system to the power mains.

NOTE:

- PoE ports are in the same network domain as NET 2.
- If you connect external USB storage, connect it to the USB 3.0 port (at the back of the chassis).

NOTE:

1. The onboard DHCP server provides IPs for the connected PoE cameras (10.1.1.1 or 192.168.2.1 onward). The uplink Ethernet port acquires a different IP from the network it connects to. The PoE ports and the uplink are in the separated networks.

If your uplink port happens to connect to a 10.1.1.x network, make sure you change your PoE subnet to 192.168.2.x segment.

Although the system supports MAC Binding, the system should be able to detect VIVOTEK's cameras within the network regardless of the presence of a DHCP server.

•		IPv4		
o.		Configuration:	DHCP	
		IP:	192.168.51.172	
H		Subnet mask:	255.255.255.0	
		Gateway:	192.168.51.1	
		DNS server 1:	192.168.51.1	
1		DNS server 2:		
3				
		IPv6 Link local address	fe80::202:d1ff:fe62:385e /64	
		Configuration:	Auto	
5	IP		IP / Prefix length	/ 64
			Gateway	
ŧ	DDNS		DNS server	
	Service			
		POE DHCP: 10	0.1.1.1 N	
		10	2.1.1.1 0.1.1.1 92.168.2.1	
			22.168.2.1	

- 2. Note on external storage enclosure via the USB 3.0 interface (the upper port):
- 2-1. If external USB 3.0 storage is attached, a max. volume size of 16TB is supported. The NVR supports the connection to a USB3.0 storage with a maximum of 5 disk drives. The minimum storage size in the external storage is 64GB.
- 2-2. The external storage must be powered on first before the NVR.
- 2-3. Hot-swapping is not supported. If the external storage is disconnected, recording will be continued using the NVR's internal disk drives.
- 2-4. The storage configuration on the external storage is separately configured, e.g., RAID configuration. The RAID volume on the external storage appears to the NVR as a single large disk drive, and you should create a volume from it from the Storage configuration page.
- 2-5. If the disk drives in the external storage are not configured into the NVR's storage volumes, you can use them as the external backup devices. To do so, you should format disk drives in the external storage in the FAT32 or NTFS format, and export the recorded video on NVR to these disk drives.

2-6. Limitations:

- When you are exporting video to the disk drives in an external storage, you cannot select the other disk drives to create a new volume.
- If the disk drives or volumes in the external storage is smaller than 1TB, you cannot configure them as volumes for the NVR.
- The connection interface to external storage must comply with the USB 3.0 specifications.

Terminal Block Connections

The terminal block pinouts is shown as follows:

The relay pins default status is set to Normally Open. Connect your relay or external devices' signal wires to the system, the system will automatically detect the current signal status. You can then trigger the external devices using the DI/DO panel on the live view.

You can also configure the system alarm setting for the system to automatically trigger a relay pin on the occurrence of system events. See Alarm settings on page 129.

24 - User's Manual

If you connect the NVR to a PoE port of the AW-FED series PoE switch, make sure you turn off the PoE output on that specific port using the onboard DIP switch. Otherwise, the high power output can damage the LAN port on NVR.

Limitations on text entry length:

- * User account: 64 alpha-numeric characters
- * Account password: 64 alpha-numeric characters
- * Path name: 256 alpha-numeric characters
- * Supports all printable ASCII (0x21-0x7E) characters and space (ox20) for password. !"#\$%&\'()*+,-./0123456789:;<=>?@ABCDEFGHIJKLMNOPQRSTUVWXYZ[\]^_`abcdefghijkI mnopqrstuvwxyz{|}~
- * IP domain name: host.xxx.yyy.zzz 63 bytes; total: 253 bytes
- * Email account: local@domain_name_part local -63bytes domain_name_part 253 bytes.

A local console requires the following:

- 1. A monitor is connected via an HDMI or VGA cable.
- 2. A mouse and/or a keyboard are connected to the system.
- 3. It is presumed that the system has not been configured yet.

Follow the onscreen messages to complete the initial configuration:

You should create a password for the protection of your system first. Use the combination of alphabetic, numeric, and special characters of at least 8 characters to create a password of

reasonable st	rength.		
Hello, Adm	inistrator		
Set up password before	launching NVR.		
	llphabet character (uppe	rcase or	
lowercase), and 1 nume	nc character.		
Username	admin		
New password	*****		
Confirm password	*****		
	È		
	Apply		

1. Select the UI language, Time zone, and current date and time. Click on the Continue button to proceed. Make sure you enter the correct date and time.

O Start		Insert cameras	Create Volumes	Finish
	Language Time zone	English Asia/Taipei (CST, GM June 07, 2021	✓ ✓ ✓ 10:59:26 ✓	
Skip setup		4	Camera list will be cleared and disk(s) will be formatted after auto setup	Continue

Except in the initial setup, changing system time can produce disruptions to the existing recordings. Turning the current system time back to a time when video recording was taking place can generate duplicate files. And those files may not be playable.

2. The system will then start to scan the local subnet for connected cameras.

3. All cameras detected on the network will be automatically selected. If necessary, deselect the cameras you want to exclude from the configuration. Click **Continue** to proceed.

The NVR will automatically change the camera streaming settings. Please do not skip the add camera process in the setup wizard.

cameras fou	Ind				
Unselect all	IP ~	MAC ~	Model ~	Port ~	Channel ~
	192.168.6.143	00-01-CC-81-30-04	CC8130	80	1

					1
 	192.168.6.151	00-02-D1-26-A5-DB	FE8174	80	

The cameras connected to the NVR PoE ports are placed behind a default gateway 10.1.1.1 or 192.168.2.1.

🖉 NOTE:

1. The maximum decoding bandwidth is

H.265 Up to 1080P@360fps

H.264 Up to 1080P@360fps

Pre-recording: 5 seconds (max. 10) Post-recording: 20 seconds (max. 300)

When cameras are recruited into the configuration, their stream 1 is used as the recording stream.

The resolution and fps (frame rate per second) of stream 1 may vary depending on the specifications of different cameras.

2. If there are less than 8 or 16 cameras, the Auto Setup will automatically move to the next configuration step.

Start		Insert cameras		Create Volumes		Finish

5-5 Please visit the VORTEX FAQ section <u>https://vivotek.zendesk.com/hc/en-001/</u> <u>sections/16268878708633-VORTEX</u> for more information on how to use VORTEX Connect. In addition, if you are an existing VIVOCloud user and want to continue using this service, click No in the following dialog box.

NOTE:

For VIVOCloud and VORTEX Connect cloud services, you can only activate/enable one cloud service at a time.

6. Another optional utility, **VIVOCloud**, is available through the Apple and Android App Stores. The VIVOCloud works with a server hosted by VIVOTEK for bridging and tunneling video requests between client devices and network cameras/CMS/NVR. The utility simplifies and facilitates network configuration for access across the Internet.

The prerequisites for using the VIVOCloud are as follows:

- 1. Download and install the VIVOCloud utility to your cell phone.
- 2. Both the NVR and your cell phone have access to the Internet.

With this utility, you do not need to configure IP port forwarding on router or set up a DDNS address for the NVR. You do not even need to know the IP address of the NVR. The VIVOCloud utility automatically manages the network parameters required for making the connection. The VIVOCloud comes with viewing and playback interfaces very similar to those in the iViewer utility.

If you are an existing VIVOCloud user, on the NVR screen, click **System > Cloud service > Existing VIVOCloud users**.

Next, enable VIVOCloud. Then, tap **Add devices > Add devices manually > SCAN QR CODES** to scan the QR code from within the VIVOCloud app and wait for the connection process to complete.

Power Up and Power Down

To power up and power down,

On the initial configuration:

- 1. Connect the power cord to the power socket on the back of chassis.
- 2. Use the power switch near the socket to turn on the enclosure.

To power down,

6

Use the Shutdown button in Settings > system overview.

Press the Reset button for longer than 5 seconds can restore system defaults.

WARNING:

- No storage system is completely fail-safe. Damage to data might occur due to file system corruption, operating system malfunction, virus infection, HDD component failures, and so on. Therefore, it is highly recommended to regularly back up your data, and VIVOTEK disclaims responsibilities of data loss or recovery.
- 2. The system is powered off when you observe that all LEDs go off. Do not disconnect the power cord while the system is still operating. Doing so will result in data inconsistencies. The normal power-off procedure allows cached data to be written to disks.

NOTE:

If system buzzer is sounded, move your mouse cursor to reveal the main screen portal, and then click on the **Stop buzzer** button.

Serious system faults, such as a missing volume, can trigger the system buzzer. Verify the cause of system fault and turn off the buzzer.

1. On the desktop, move your mouse to reveal the main portal. Click on the Crowd Control et the bottom.

 If no human traffic has occurred, the NVR will return NO COUNTING DATA.
 If there are people crossing the counting area and no counting data is shown, you should examine your configuration and the camera connection in your NVR.

3. Click on the CURRENT number.

Section 1: Management over a Local Console

Chapter 2: Introduction to the Local Console Interface

By default, a live view appears on an HDMI monitor. The interface architecture of the local console is illustrated as follows:

After you finish configuring using a Camera portal, click again on the camera view cell to reveal the main control portals.

For the Export recordings function, refer to page 95.

2-1. How to Begin

1. How to access the Configuration Portal?

Make sure a mouse is attached to your NVR. Move your mouse cursor, and the Configuration Portal will appear on screen. For all the configurable options available through this portal, please refer to Chapter 3 on page 65.

2. How to access the Camera Portal?

Single click to select a view cell, the Camera Portal will appear. The system automatically detects the characteristics of an individual camera when you select a view cell.

This portal appears with a camera that supports mechanical PTZ.

This portal appears with a camera that does not support mechanical PTZ.

-Ò́- Tips:

Here are some operation steps using the tool bar:

- 1. Single-click to select a view cell and bring out the tool bar.
- 2. Double-click to expand a view cell to the full view.
- 3. Double-click again to shrink the view cell to the original size.

PTZ control panel for ordinary PTZ type PTZ control panel for joystick type PTZ

PTZ presets: If your PTZ cameras have preset locations, click on the button to unfold the preset menu. Click on any of the preset locations to move to the area of your interest.

Pan/Tilt controller: Pull the inner circle to the direction you prefer. Release the mouse button to stop moving.

Zoom controller: The zoom controller buttons only apply to cameras that come with an optical zoom module, such as a speed dome camera.

Focus controller: The focus controller buttons apply to cameras that come with focus control over its lens module, such as a speed dome camera.

3. How to retrieve and access recorded videos?

3-1. One is to access the video clips taken within 2 hours. Left-click to select a view cell, and then click on the Recording clips button.

The **Playback** window will prompt, and a playback begins from the point in time you selected, e.g., 30 seconds ago. This function allows you to quickly review what has just happened.

3-2. Another way to access past videos is to open the **Search recording clips** window. Move your mouse cursor to display the **Configuration Portal** (without selecting any view cell). Click on the Search recording clips button. Please refer to page 66 for more information about the search functions.

56 - User's Manual

4. How to recieve system alarm?

Please refer to page 129 for how to configure system alarm triggers. When the alarm is triggered, e.g., by digital inputs or motion detection, an alarm message will prompt on the screen.

Use the > arrow button to browse through the alarm messages.

If the alarm is configured with video recording as the responding action, you can click on the alarm entry. The Playback window will appear, allowing an instant playback of the alarm-related footage. You will enter the "Search alarm results" page even if the alarm does not trigger a recording action.

5. Why live view is unavailable?

The default live view receives a camera's stream #1. If a camera's stream #1 is configured using **MPEG-4** as the video codec, the following message will prompt.

You can go to the Settings > Camera > Media > Video window to configure the video codec of stream #1 into H.264 or H.265.

•)			Stream management Video Audio	
٩		01 - Camera 01

		A		

6. How do I move to another layout page?

Move your cursor to the right hand side of your screen. The page turner buttons will appear as shown below.

For example, if you have 8 cameras placed on 2 2x2 layout pages, use these buttons to visit different pages.

7. Why the onscreen tool bars disappear after some time?

The system comes with idle modes. Below are the applicable conditions:

- 1. **Live view:** if no management activities occur for 5 seconds, the tool bars disappear from screen. When in the idle mode, mouse cursor and tool bars will disappear. Moving the mouse cursor will re-activate the screen.
- 2. **Settings page**: If left unattended for 10 minutes, system will automatically log out. The system will prompt for user credentials if a user tries to access the Settings page again.
- 3. **Search recording clips** window: If currently there is a video playback, the system will not enter the idle mode.

2-2. Operation on Camera View Cell

Once you selected a camera, click on the PTZ button on a camera portal.

The PTZ panel will prompt. Below are the description of its functions:

- 1. PTZ control: Click and drag the nudget in the center towards the direction you wish to move to.
- 2. Focus: Click on the Focus near and Focus far buttons to adjust camera focus.
- 3. Home: Click to move the camera lens towards the default home position.
- 4. Zoom: Use the Zoom in and Zoom out buttons to adjust the camera's zoom ratio.
- 5. Presets: If you configured preset positions, a list of preset positions will appear.
- 6. Patrol: If you configured preset positions into a patrolling tour, click on this button and the camera will proceed with patrolling through preset points.

Note that on a speed dome camera, the farther you pull the nudget away from the center, the faster the lens moves. This works like speed control.

Below is the PTZ panel that appears with ordinary PTZ cameras.

- 1. PTZ control: Click on the arrow buttons to move towards the direction you wish to move to.
- 2. Focus: Click on the Focus near and Focus far buttons to adjust camera focus.
- 3. Zoom: Use the Zoom in and Zoom out buttons to adjust the camera's zoom ratio.
- 4. Presets: If you configured preset positions, a list of preset positions will appear.
- 5. Speed: Adjusts the speed when moving across the field of view.
- 6. Patrol: If you configured preset positions into a patrolling tour, click on this button and the camera will proceed with patrolling through the preset points.

IMPORTANT:

Due to the limitation of system resources, the fisheye dewarp (1R & 1P) can only take place on one view cell, for one fisheye camera.

Joystick support

The joystick related operations are listed below:

- 1. Pan: Continuous move is supported. (joystick X-axis movement)
- 2. Tilt: Continuous move is supported. (joystick Y-axis movement)
- 3. Zoom: Continuous move is supported. To zoom in, move joystick Z-axis clockwise (or use button #2). To zoom out, move joystick Z-axis counter-clockwise (or use button #3)
- 4. Home: joystick button #1.
- 5. Auto Pan: joystick button #5.
- 6. Patrol: joystick button #7. Preset positions must be pre-configured for the camera.
- 7. Stop: Stops auto pan or patrol. Joystick button #6.

2-2-2. Digital zoom Panel

Ð

DI/DO

 \odot

Digital zoom is a function that provides digital zoom into a live video. Be sure you place your mouse cursor inside the Global view window for the zoom function to take effect.

When activated, a Global view window will appear at the lower right of the view cell as shown below. You can display only a portion of the complete video frame as an area of your interest. Using a click and drag on the ROI window, you can instantly move to other areas within the video frame. Use the zoom ratio pull bar at the bottom to change the zoom ratio. You may also move the ROI around by click and drags.

Note that not every camera supports the PiP function.

30

1

10

3

60

2-2-3. Play Recording Clips Panel

 The Play Recording Clips function provides a shortcut to the latest recordings on the system. You can select 30 secs, 1 min, 3 mins, 10 mins, and 60 mins for an immediate playback.

For security reasons, using this function requires users to enter his/her credentials.

The **Playback** window will prompt, and a playback begins from the point in time you selected, e.g., 30 seconds ago. This function allows you to quickly review what has just happened.

2-2-4. DI/DO

The DI/DO panel provides a glimpse of all DI and DO signal statuses from the connected cameras. You can manually trigger a digital output by clicking on its indicators.

When a digital input is triggered, its status will also be indicated on the panel.

WARNING:

Please note that DO is triggered by one click. You should then click again to disable the DO. Otherwise, the DO signal will be continuously triggered. As the result, if the DO is configured as an alarm trigger, many alarm messages will be generated.

2-2-5. Others

1. Snapshot : is used to take a snapshot from the camera currently selected. Note that this function only saves the snapshot (in JPEG) to a USB thumb drive.

MIMPPORTANT:

The USB thumb drive has to be one that is formatted in FAT format.

- 2. Manual Recording O: Press the button to start a manual recording from a selected camera. Click again to stop the recording.
- 3. Return button): Click to return to the LiveView window.

2-2-6. Right-click Commands

Left-click to select a camera. Right-click to display the selection menu.

- 1. **Camera information**: Click to display camera name, resolution, codec, or frame rate on the view cell. The information will display on the upper left corner of a view cell.
- 2. Stream: Select to display the main or subordinate stream.
- 3. **Disable live streaming**: Choose to display snapshots on the screen instead. The snapshots are regularly replaced.
- 4. **Fit screen with ratio**: The NVR server automatically optimizes the display of camera view cells. However, you can still select this option to display the camera's original aspect ratio: for example, the original video feed can be 4:3. Without the fit screen, every camera's image will be expanded to fill the view cell.
- 5. Show VCA rule: Displays the Smart VCA rules you previously configured via a web console.
- 6. Show tool bar: You can hide the tool bars by deselecting this option.
- 7. Pin status bar: If selected, the status bar will constantly display on screen.
- 8. Log in/Log out: Log in to enable system configuration.

A time tab is displayed at the lower center of the screen. You can move your cursor to the lower center to display the time tab and the alarm panel.

For the 3D counting cameras, right-click on its view cell to display the counting rule option. You can enable the display of counting lines, and the bounding boxes for detected objects. The counting results are acquired through the VIVOCloud utility.

Note that the NVR supports the connection of up to 4 counting cameras. The VCA rule displays only on the 2x2 layout.

Chapter 3: Configuration Using the Local Console

The Main Control Portal

3-1. Layout

----# -F # DI/DO TT -11-TT Q. 0 • 0)

Move your mouse cursor across the screen to display the portal.

The local layouts:

1x1, 2x2, 3x3, 4x4, 1M+5, 1M+12, 1M+31(ND9542P only), 1P+3, 1P+6, 2P+3, 3V

If you select the single view layout, the rotation button will appear. Click the rotation button below to let the system swap the display of different cameras by every 10 seconds. The rotation speed is configurable via Settings > System > Display.

3-2. DI/DO

Click on the DI/DO button to display the full list of all DI and DO signals (whether they are connected or not) from all cameras in the configuration. If a digital input signal is triggered, e.g., the DI-4 on the left, its indicator will turn solid white.

Note that you should click again to disable a DO after it is triggered. Otherwise, the DO will be constantly triggered.

3-3. Search recording clips

3-3-1. Basic Search

Click the button to start searching for recorded clips. A confirm box will prompt. Enter User name and Password to proceed.

The search and calendar view will appear. Select a day on the calendar to select the date when the recordings of your interest took place (the days with recorded clips will be highlighted in blue and green).

Double-click on a day to begin playback and search.

The date highlighted in green indicates today, and the green indicator does not necessarily mean that there are recorded videos today.

Use the layout button **to** adjust view cell arangement on screen. You can retrieve the recorded videos from a max. of 4 cameras at the same time.

Once you select to playback multiple cameras, the playback window will automatically turn into the 2x2 layout. Up to 4 cameras' recording can be played back simultaneously. This enables the synchronized playback of video produced by multiple cameras. Users do not need to switch from one camera to another when searching for forensic evidences.

The timeline bar enables quick skimming through the recording. Its functions are described as follows:

Buttons	Description
24 hrs	Time scale selector. Use the buttons to select the span of time displayed on the tool bar.
4 1)	Audio volume tuner.
()	Plays back from 10 seconds ago.
¥ 1	Previous frame. (I-frame only)
	Next frame. (I-frame only) After you paused a playback, use this button to browse video frame by frame.
	Play backwards.
	Play. This button is available after you paused a playback.
	Pause.
	Each click on it speeds down by 1/2. The slowest speed is 1/16.
- +	Each click on it speeds up by 2x. The fastest speed is 16 times. The current playback status is indicated on the screen.
Ð	Digital zoom. This applies when a camera is displaying the full of its field of view. You can use the Digital zoom function to zoom in on the field of view.
► 2	Export clips. Use this function to select a span of time you want to export to other medias.

By default, the playback starts from the beginning of a day's recording. While playing the recorded video, click on the timeline to replay a point in time in the video.

Snapshot. Takes a snapshot of the current FOV. The Snapshot button has been moved to the right-hand side of each view cell.

Note that to export a video segment from the playback timeline,

- 1. Click on the **Export** button
- 2. Insert a USB drive formatted in the FAT format.
- 3. Select the "From time" by clicking on the timeline. You can also manually enter the "From time" and the "To time."
- 4. Click on the "From time" tab using a single click.
- 5. Repeat steps 3 and 4 to configure the To time.
- 6. Click on the Export button.

The export process is indicated on the right. Depending on the length of footage to be exported, this process can take minutes.

	● ७ ◄ ►	┥ ● 🕲	(- 1x +	Exporting 47 %	0
11:10	11:20	11:30	11:40	11:50	12:00
	CEALA EA EA EA EA	. 1. (21.5. 1. (21.5			>

When completed, a message will display on screen.

The default for export is 5 minutes before and 5 minutes after the point in time that is currently selected.

3-3-2. Alarm Search

Click on the Alarm search button on the upper left of the screen to enter the Alarm Search panel.

You can specify the search criteria by selecting the devices to be involved in the Alarm search. 1. Camera list.

- 2. The From and To time.
- 3. Pre-configured alarms, such as those associated with camera DI, motion detection, or VCA analytics triggers, etc.
- 4. Trigger: DI, DO, tampering detection, disk failure, cyber security events, and VCA video analytics events.

Use the combinations of these parameters to sort through the alarms.

You can then specify the start time and end time to configure a span of time to be searched.

You can also determine what alarms will be included in the search.

You can select what types of triggers were associated with the recordings you want to find.

When done with the selection, click on the Search button. In the sample screen below, a list of alarms is displayed, and you can click on any of them to replay the moment when the alarm was triggered. The alarm-related recording will typically include a length of 5 seconds of pre-alarm and 20 seconds of post-alarm footage.

ை டு	A R	\odot	Ċ.	***	
	Alarm :	search			
All					~
April 06, 2014	*	April 0	7, 2014		~
17:11	~	17:	22		~
All alarms	*	All trig	gers		~
	Q _R				\$
	~				
4 result(s)

New alarm	Camera 01 [DI	20	014.04.07 17	7:21:58
New alarm	Camera 01 [DI	20	014.04.07 17	7:21:40
New alarm	Camera 01 [DI	20	014.04.07 17	7:21:23
New alarm	Camera 01 [DI	20	014.04.07 17	7:21:15

Up to 200 search result entries will appear. If more than 200 entries have been found, click on the New results button on the last entry page.

If two cameras participate in the recording of an alarm-related event, the footage of one camera will be played first, and then that of the other.

If a user's operation takes place (pause, rewind, etc.) during the playback, the system will stop the consecutive playback of multiple alarm footages.

NOTE:

When the Search window is left unattended for 10 minutes, the NVR will return to the live view display. To enter the Search window, you will have to enter the user credentials again.

Use the page up and page down buttons to browse through the alarm list. Use the continuous playback button to let the system automatically play all alarm clips. The continuous play starts from the first alarm or from the alarm you currently clicked and selected. Click on the button again to stop the continuous play.

NOTE:

The NVR needs to store a database on the hard drives for keeping the Deep Search metadata. Such metadata will take up storage space, yet the database size will be smaller than Smart Search II.

NOTE:

When the Search window is left unattended for 10 minutes, the NVR will return to the live view display. To enter the Search window, you will have to enter the user credentials again.

3-3-3. Smart Search II

Smart search II is available only for the newer line of cameras that come with Smart Motion detection. Smart search II has the following benefits:

- 1. Faster search: Metadata is saved with videos coming from cameras running Smart Motion detection. With the help of the metadata, the search focuses on the effective alerted vectors and the adverse effects, e.g., headlights causing dramatic contrast or small anima3ls passing through, have already been eliminated by the camera. The search can be more rapidly completed.
- 2. People detection: The search can be conducted for human activities only. Activities matching the silhouettes of human will be considered as effective results.
- 3. Polygon search: Users can create a polygon on the areas of their interest to begin a search. Note that the Smart Motion detection configuration takes place on a web console to individual cameras. It is not configurable on the NVR.

Note that the Smart Motion detection areas must have been configured on each camera before the Smart search can take effect.

You can specify the time span, People detection, Sensitivity level, and time filter parameters in a Smart Search II panel.

76 - User's Manual

Click the Search button to begin the search. Depending on the scale of the search (how many cameras involved, and the span of recordings in search), the search should be completed in a few minutes.

The search results will display as thumbnail images. To view each short video clip, click on the thumbnail. You can also select to display the results in a list view.

You can then click to open any clip of your interest. Each marked event clip will be indicated by a lighter color on the time line. You may then select clips of your interest and click the "Select clips to export" button. The associated clips can be exported to a USB thumb drive.

The playback video window is located on the right. Click on the Expand/Shrink button to watch the video in a full screen.

You can use the Esc button to leave the full screen. Click to select another thumbnail, or use the < or > buttons to view the previous or successive clips.

If you find important events, use the Export function to mark the start and end points on the timeline to export a video clip. By default, the export length varies depending on the appearance of moving objects. Instead of the thumbnail view, you can also change the display of search results using the list view.

Note that when exporting video clips, each clip is selected using a small checkbox on the upper left corner of the thumbnail.

3-3-4. Deep Search

The Deep Search function uses AI empowered by VIVOTEK AI cameras to improve search functionality, and it comprises two main functions: Attribute Search and Scene Search.

Without relying on scrolling through the video footage frame by frame, VIVOTEK AI cameras provide object-based metadata to enable intelligent video evidence search.

By utilizing object-based metadata-defined attributes and rules, Deep Search helps users search for the target of interest smarter and faster.

To use the Deep Search function, make sure you have added the cameras that support Deep Search and have the time synchronizing among NVR and cameras.

NOTE:

Deep Search in firmware 4.2 or newer supports some premium and mid-range camera models. Please visit VIVOTEK's website for details of the supported cameras.

The Deep Search panel defaults to the display of all cameras and the search for People. You can select Vehicle from the pull-down menu. You should narrow down your search by clicking on the Search in column.

NOTE:

Deep Search can be accessed only through the NVR local UI.

To activate Deep Search, click on the Deep Search icon in the toolbar of the NVR live view cell.

Select one of the following object types from the pull-down menu:

- People
- People with attribute
- Vehicle
- Vehicle with attribute.

Select "People" or "Vehicle" objects if you want to search for people or vehicles in a

15:30	*	15:30	*

Select Attribute Search or Scene Search.

Attribute Search:

Find the people or vehicles with specific appearances from multiple cameras.

Scene Search:

Search for the object appearing or lingering in the virtual area or crossing a virtual tripwire.

Note that this search can only be applied to a single camera.

Users can click the button to select a search rule type:

- Intrusion: Draw a closed area in which you want to find related people or vehicles staying in this virtual area.
- Line crossing: Move the nodes to draw a tripwire to find related people or vehicles crossing this virtual wire.
- Loitering: Draw a closed area in which you want to find related people or vehicles staying in this virtual area for more than a specified period.

Click Search to begin your search.

The number of results will be shown at the top of the results area.

If there are more than 200 search results, only the latest 200 results will be listed.

If there are search results after performing Deep Search, you can play each corresponding video thumbnail and take snapshots as needed.

IMPORTANT:

- Not all the cameras support finding all the object types. When users select one type of object, only the supported cameras will appear in the camera list. By default, all the cameras that support the object type will be selected. Users can click the device list and choose the cameras.
- 2. When selecting multiple colors for clothing, the results will show objects with any of the selected matching colors.
- 3. When searching for people with multiple accessories, the results will show objects with all the selected matching accessories.
- 4. When searching for motorcycles or bikes, color attributes are not supported.
- 5. Please visit the VIVOTEK'S website and check supported cameras for Deep Search. (<u>https://www.vivotek.com/ai-driven/deep-search-system-requirement</u>)

3-3-5. Smart VCA event search

This search panel enables the search for the detection results from Smart VCA analytics functions. They include:

- * Line crossing detection
- * Intrusion detection
- * Loitering detection
- * Face detection
- * Missing objection detection
- * Unattended object detection
- * Crowd detection
- * Running detection
- * Parking violation detection
- * Smart tracking detection

The event search takes effect when the related cameras are currently recording videos to the NVR.

The search function helps sorting through hours of videos, enabling you to quickly find a person or an event of your interest. This facilitates an effective search for a deployment across large surveillance areas. VCA events are recorded along with video recordings.

The NVR automatically detects cameras that come with the video analytics functionality. Note that the video analytics configuration should be separately configured on individual cameras; such as drawing the detection zone and detection line for Line-crossing detection.

You may also refer to the following documentation for more information about video analytics:

- 1. Smart Motion Detection User Guide.
- 2. Smart VCA User Guide.
- 3. Smart 360 User Guide.

On the live view, you can also see the analytics rules and the bounding boxes indicating the detected objects while the analytics is taking place.

Below are the short introductions to these analytics functions:

Line Crossing Detection

The Line Crossing detection detects one or multiple persons crossing a virtual trip-wire. The traffic direction can be assigned on screen for persons passing the line in one specific direction or in both directions.

The applicable scenarios of this feature can be:

- * Detects someone who enters a drive way, entrance, or exit through the virtual line.
- * Detects and triggers an alarm in a predetermined direction.
- * The detection line can be used as a fence boundary to know if someone has crossed the articulated line around a perimeter.

Intrusion Detection

VIVOTEK Intrusion Detection can be used to detect people entering or leaving a virtual area in the camera field of view.

- * Detects when a person enters a bank vault or school after the office hours.
- * Detects when a person leaves an emergency exit or fire escape, or any place that is normally forbidden from access.

Loitering Detection

The Loitering detection can be used to detect a person of a group of people lingering in an area for longer than a preset time threshold.

The applicable scenarios of this feature can be:

- * Detects when a pserson is loitering at a walk-up of ATM lane.
- * Detects when a person is loitering in a high-theft area of a store, or to prevent vandalism and break-ins.
- * Detects when a person is loitering in an area that is normally not an access for visitors.

Missing Object Detection

The Missing Object detection can be used to detect the removal of a predefined asset from a surveillance scene.

- * In a campus setting, the Missing Object feature can be used to monitor high-risk areas for theft, such as the administrative offices, computer labs, or science laboratories.
- * Detects when theft occurs in storage areas or warehouses. It is helpful when there are security personnels monitoring the scene, yet their attention went down through time.

Unattended Object Detection

The Unattended Object detection can be used to detect objects intentionally or unintentionally left in scene.

The applicable scenarios of this feature can be:

- * Detects objects placed in front of an emergency exit.
- * Detects objects left on subway tracks, platform, on a bridge, or in a bank lobby.

Face Detection

Face detection detects the presence of human faces in the field of view.

The applicable scenarios of this feature can be:

* By tagging the video frames which contain facial features, the administrator can later search for the video clips with presence of these faces in a more efficient manner. Instead of searching through hours of recordings, face detection can facilitate the process of forensic search in recorded videos. Objects irrelevant to facial features will be filtered out.

Crowd Detection

Crowd detection calculates the number of people in a specific area. When the number exceeds a preset number, an event is triggered.

- * Detects the congestion when the number of people in a region exceeds a preset number, e.g.,
 10 in a waiting line. For example, at an airport, when too many passengers are waiting in line, new checkpoints can be opened, and they can be directed to other checkpoints.
- * To monitor a special area where at most one person is allowed inside. For example, one person is normally allowed in the area in front of an ATM machine or a strictly guarded entrance. Tailgating can occur if one uses his/her access card to open a gate while the other sneaks in following behind.

Running Detection

Running Detection can be used to detect people running from a crime scene or rioting occurs in a virtual area, such as gang fights. The algorithm can detect abnormal running behavior with a speed higher than the normal walking speed.

- * Detects when a person running from a crime scene.
- * Detects unusual events when one or many people running in abnormal speed such as on a plaza, shopping mall, etc., that is normally calm with casual activities.

Parking Violation

The Parking Violation detection helps when vehicles stay still for a period of time in an area. You can configure an area where parking can cause problems. You can configure an event notification when vehicles stay longer than a configurable period of time, e.g., 20 seconds.

- * Detects abnormal parking on the side of the road.
- * To receive notifications when someone parks in front of an important access.

Restricted Zone

The Restricted Zone is a conditional detection where an intruder can be detected by entering a Restricted zone. The workers inside a facility will not trigger an alarm by entering a Defined zone first and then enter the Restricted zone.

The applicable scenarios of this feature can be:

* Detects and triggers an alarm when a person or vehicle enters a restricted zone while someone passes through two zones will not trigger an alarm.

Smart Tracking

Below are some basic information for the Smart Tracking feature:

- 1. The detection takes place at the pre-configured Preset positions. Tracking can only take place during a patrol dwell time.
- 2. The PTZ camera then moves its lens to track the object found until the object moves away from the scene, or enters a shelter (e.g., getting into a car). The PTZ camera may lose the track when the field of view is blocked by a building. The camera then loses the track.
- 3. The camera zooms in on the object when it is detected.
- 4. A person can not be detected when he is squatted, crawling, or riding on a scooter or bicycle since his body silhouette is merged or destroyed.
- 5. Once the camera stops tracking an object, the FOV will return to the Home position.
- 6. The maximum tracking range is 200 meters in radius.

The Smart VCA search function can be accessed from the main portal using the **Search** button. When you are at the search panel, click on the **Smart VCA search** tab.

- 1. Select the cameras that generate VCA events. Select at least one camera.
- 2. Configure the time span within which the events occurred. Use the pull-down menu to change the From and To times.
- 3. Select the Event types, namely, the pre-configured VCA analytics rules. Note that the event rules should have been properly configured on the individual cameras.

4. Click the Search button to begin the search. Depending on the scale of the search (how many cameras involved, and the span of recordings in search), the search should be completed in a few minutes.

5. The search results will display as thumbnail images. To view each short video clip, click on the thumbnail. The playback video window is located on the right. Click on the Expand/Shrink button X to watch the video in a full screen.

You can use the Esc button to leave the full screen. Click to select another thumbnail, or use the < or > buttons to view the previous or successive clips.

The default for the event recording setting is 5 seconds for pre-event, and 20 seconds for the post-event recording. You may change the parameters if the need should arise.

Recording	01 - Camera 01				
Media	02 -	Event duration			
Image	03 -	Duration of camera events for next trigger:	10	secs	
Motion d	04 -	Pre-event recording:	5	~	secs
PTZ settin		Post-event recording:	20	•	secs

You may then select clips of your interest and click the "Select clips to export" button. The associated clips can be exported to a USB thumb drive.

You may use the sort menus on the upper right to sort your search results. If using the "Sort by event type" option, events of different types will be displayed in a successive order.

When exporting video clips, mouse over and select the small checkboxes on the thumbnails. Single-click to select video clips. When the selection is done, click the Export button to proceed.

3-3-6. Storyboard

The Storyboard interface provides a glimpse of past recordings over a timeline. It looks and operates like doing the film editing after a film was shot.

To enter the Storyboard window, click on the Storyboard shortcut on the upper-left of screen.

Below are the screen elements of the Storyboard window:

To search for a particular video footage, select the target cameras and the time of recording. On the Storyboard, the timelines of up to two cameras can be displayed.

) 01 - Camera 01,02 - Camer	🔶 April 08, 2	014 🗸	٩	
 O1 - Camera 01 O2 - Camera 02 O3 - Camera 3-FD8154 	~ 1	13:00		
O1 - Camera 01,02 - Camer ✓	April 08, 2014	Select a date	۹

	20 21 22 23 24 27 28 29 30	25 26		
Click on the Search button	٩.			

Mouse over the line of snapshots to display its time of recording. Click on a snapshot of your interest. The time of recording is immediately displayed on top of it.

The detailed search is based on a narrow-down criteria. The search begins from a 24-hour time span, and then moving in to a 4-hour, 1-hour, 10-minutes, and 2-minutes span. When the screen displays a 24-hour span, each snapshot represents a 3-hour time span.

Each click on a snapshot brings you deeper into the timeline.

24 hour
4 hour
Time span:
1 hour

If you find yourself in the wrong segment on the timeline, use the buttons on the upper-right of the screen to travel.

The definitions of these buttons depend on the time span of your current position. For example, if you are in a 4-hour time span, the "Back to previous state button" will bring you back to the 24-hour time span.

The smallest time span is 2 minutes. And on the screen of 2-mins span, each snapshot represents a 15 seconds video footage.

You can then click on the Play button to playback the recorded footage.

The playback window will appear. Please refer to page 67 for the operation details.

To return to the Live View window, click on the Back to Search recording clips button the Back to Liveview button on the upper-left of the screen.

3-4. Export recordings

DI/DO

2

0

1

0

The Export recordings button allows users to directly select a piece of recordings by a specific camera, and export that to a USB thumb drive. Users can select one or multiple cameras, select a period of time in which the recording took place, and then click export.

The max. length of recording export is 24 hours.

To export recordings:

- 1. Attach a USB thumb drive formatted in FAT format to the NVR's USB port.
- 2. Select one or multiple cameras from the list.

- 3. Select the start time of the period of recording time.
- 4. Select the end time of the period of recoding time.
- 5. Click the Export button.

A tar file containing a log file will also be created, including the information for export time, user, camera name, recording time span, etc.

6. The Export progress will be shown.

7. When the Export process is done, select to resume another export or go back to the live view.

	Ехро	rt successfully	
В	ack to liveview	Export another recording	

Note that the Export process can take a long time if the time span of the selected video is very long.

3-5. Settings

3-5-1. Settings - Overview

DI/DO
2

The Camera menu provides access to **Management**, **Recording**, **Media**, **Image**, **Motion detection**, and **PTZ settings** pages.

3-5-2. Settings-Camera-Management

On the camera Management page, you can configure the following:

- 1. Recruit or disband cameras.
- 2. Create a camera name.
- 3. Binding: Designate how a camera is recognized. The default is MAC binding. The NVR recognizes a camera by its MAC address regardless of IP changes. If set to IP binding, static IP setting is preferred. If IP changes occur, the NVR may not be able to access the cameras.
- 4. Protocol: You can select ONVIF to recruit cameras made by other manufacturers.
- 5. Assign User name and Password, or apply the credentials to all cameras in your configuration.
- 6. Change the Network settings.
- 7. Change the cameras' positions on the layout screen.

•					
•)

For camera name, you can enter up to 64 alphabetic and numeric characters including [0-9][a-z][A-Z][_][-][]. For user name and password, you can enter up to 64 alphabetic and numeric characters including [0-9][a-z][A-Z][!][\$][%][-][.][@]["][~].

For legacy cameras, the NVR supports RTSP connections since firmware release revision 2.6.x.

To manually add a legacy camera,

- 1. Select an empty camera entry,
- 2. Click the Add button,
- 3. Select RTSP as the protocol.
- 4. The original rtsp address is: rtsp://<ip address>:<rtsp port>/<access name for stream 1 to 3>. For example, when the access name for stream 1 is set to live.sdp: rtsp://192.168.5.151:554/live.sdp.

However, you only need to enter IP address and "live.sdp" in the URL field. The system automatically fills in the other parameters.

+ -	Camera name Binding IP	Camera 05	Camera name Binding IP	Camera 04 IP ~ 192.168.5.123
02 - Camera 02	Port	80	Port	554
03 - Camera 03	Protocol			
04 - Camera 04	Channel	VIVOTEK	Protocol	RTSP 🗸
	Model	ONVIF RTSP		URL live.sdp
	MAC			
	Username Password	Apply to all cameras	Username Password	root •••••• Apply to all cameras

Note the following when using RTSP connections:

- 1. RTSP cameras do not support event recording in the Schedule settings.
- 2. RTSP cameras do not support FTP, Camera DO, and PTZ as the Alarm action.
- 3. RTSP cameras do not support camera's related settings such as Network, Video, Audio, and Display configurations.
- 4. RTSP cameras will be indicated by an RTSP tag in the device list.
- 5. RTSP cameras do not support Motion detection configuration.
- 6. RTSP cameras can not be selected as an alarm trigger.

In Media > Stream managemeent page, the related Video, Audio, and stream configuration for RTSP cameras can not be edited. The RSTP cameras will be tagged.

To recruit cameras:

1. Click on the Add 📩 button. A list of cameras in the same subnet will appear.

		IP					Model ~		(h

	16-			

- 2. The **Remove** button will turn yellow —. Mouse over to the camera you want to remove, and its entry will display the **Remove** message.
- 3. Click on the Remove message. The camera should then disappear from the camera list. The recording from that camera will also be discontinued.

Network

On the Network tabbed window, you can configure the network type, IP address, and the connection ports for video streaming. The cameras connected to the NVR PoE ports are placed behind a default gateway 10.1.1.1 or 192.168.2.1.

•)						
¢						
	Management	Configuration	DHCP			
	Recording	IP	0.0.0.0			
	Media	Subnet mask				
÷	Image	Gateway				
0)]	Smart VCA detection	DNS server 1

i	Port forwarding	HTTP port	80			
		RTSP port	554			
t and the second se	Update firmware	RTSP authorization	digest			
		Apply to all came	ras			
				12		

You can select DHCP as the method for cameras to acquire IP addresses, or you can manually configure static IPs for a single or all cameras. Although the NVR can remember the MAC addresses of cameras, if IPs are changed under the DHCP configuration, your NVR may still fail to connect the cameras. Please consult your network administrator for details about network settings.

It is usually not necessary to change port numbers for the HTTP and RTSP ports unless there is a conflict in your network environment.

Camera position

To change a camera's position on the Liveview layout, click and drag a camera to an unpopulated position. Note that you cannot swap the positions of two cameras by dragging a camera onto a position already populated by the other. Also, the camera index number on the management list is not affected by the change of positions. Click the **Apply** button for the configuration change to take effect. The position screen displays the current layout on the Liveview screen.

3-5-3. Settings–Camera–Recording

Recording options

On the camera Recording page, you can configure the following:

- 1. Configure the duration of camera events, for the concern that camera can be too frequently triggered.
- Enter the Pre- and Post-event recording time. The triggering events can be DI, DO, Motion detection, PIR, or Tampering detection. A recording length of 10 seconds of pre-event and up to 300 seconds of post-event can be configured.
- 3. The default recording stream is Main Stream. You can still change the streaming characteristics. Note that you can not assign the recording task to other video stream.
- 4. Enable or disable audio recording. Note that audio transmission through HDMI cable is currently not available.
- 5. Change the life expectancy of the recording data.
- 6. You can apply a typical configuration to all cameras using the Apply to all cameras checkbox.

Settir	ngs

			13 - Camera 13	Watermark password:		
			14 - IB9391EHTVv2		16~64 characters, letters and num	nbers only
			15 -	Activity Adaptive Streaming (AAS)	
			16 -	Record audio		
			17 -	Keep recording data:	180 days	
			18 -		Must be between 1-999 days	
			19 -			
			20 -	Apply to all cameras		Apply

Dual stream recording is also supported if the need should arise.

Also, if you enable seamless recording recovery on main stream (while an SD card is installed in the corresponding camera), you can ensure the video recording will continue if the network connection or electric power is interrupted. That is, after the network connection or electric power restores, the NVR will recover the videos recorded on the SD card and ensure the video recording is not interrupted. In other words, in the event of network connection loss or power interruption, Seamless Recording activates to safeguard video recordings. By seamlessly backing up recording data to the SD card installed in the corresponding camera, users can ensure the preservation of critical footage under various circumstances.

NOTES:

- 1. Recording data will not be backed up if the camera is connected to the NVR's PoE port in the event of a power interruption on the NVR.
- Please ensure that each specific camera is equipped with a compatible SD card for seamless recording functionality.RTSP & ONVIF cameras do not support seamless recording recovery.
- 3. Do not update the clock on the camera if seamless recording recovery is in progress. This is to avoid possible repeated playback or broken video files.
- 4. If a video file is being recorded while the network connection or electric power is interrupted, this video file is corrupted. So, seamless recording recovery does not apply.
- 5. You can refer to the User Manuals that come with your network cameras for more discussions of these configurable options.

7. Watermark password: Configure a password in a length of 16 to 64 characters. You can use it to verify the authenticity of exported videos using the included video player.

Select File > Verify Watermark.

Enter the password to verify. If the Not match value is 0, the video is the original and has not been tampered with.

Recording Schedule

By default, all video feeds from cameras are recorded at all time. You can modify the recording task using the schedule tool:

1. Click to select a recording condition's checkbox–1. Continuous recording 2, Event recording

, and 3. Clear (no recording).

2. Click and drag on the cells on the time table. For example, to stop the recording during a period of time, select the the Clear checkbox and move the cursor across the time table. The minimum unit on the table is half an hour.

3-5-4. Settings–Camera–Media

The NVR automatically changes camera stream settings when cameras are added.

If users want to manually configure camera stream setting, they can disable this function. The default for the automatic configuration is,

- Main stream: H.265 5M
- Sub stream: H.264 360p

The Main stream is set for higher video resolution & Network bandwidth use. The Sub stream requires lower video resolution & Network bandwidth. Users can not associate individual camera stream with either the Main or Sub stream.

- Main stream: the 1st stream of camera with H.265/5M/4Mbps/max frame rate.
- Sub stream: the 2nd stream of camera with H.264/360P/1Mbps/max frame rate
- If the connected camera does not support the values described above, the NVR will take the value close to the specifications (resolution/ bitrate)
- The Main stream is applied with 2x2 or other layout of a larger view cell.
- The Sub stream is applied with 3x3 or other layouts of a smaller view cell.

On a local console, the P (Panoramic or M (Middle) view cell will display the Main stream.

On a web console, the Main stream is displayed on a 1x1 layout. The Sub stream is displayed on other layouts.

For Playback:

Only the Main stream is selected for Playback display. The exported clip file should be the same as selected as the stream type. The Main stream will be the default.

116 - User's Manual

The NVR adaptively selects to display a video stream of a different resolution when it is displaying on a smaller view cell or a full screen.

By default, the Recording stream is Main Stream, which is recorded to the H.D.D.

Video

The Video window allows you to configure all video streams (the no. of stream available can be different for different models). You can configure the following:

- 1. Main stream/ Sub stream: Select to configure two basic categorized streams.
- 2. Codec: video compression codec in H.264, MPEG-4, or MJPEG. Note that MPEG-4 is not supported for Liveview.
- 3. Frame size: video resolution. Note that due to the limited CPU resources, you may not be able to change the resolution to a very high value, e.g., 5MP in the 1920x1920 resolution.
- 4. Maximum frame rate: the highest frame rate.
- 5. Intra frame period: How often an I-frame will be inserted into the video stream.
- 6. Smart Stream II: Some newer camera models come with Smart Stream features. Please refer to the next page for detailed information.
- 7. Video quality: You may either select Constant bit rate or Fixed Quality as the defining rules for video transmission:

	Places a packet size threshold on video frames; This guarantees the frame rate per second performance, yet image quality can be compromised if bandwidth is not sufficient in your network environment.
Fixed Quality	Guaranteed video quality, and to ensure image quality, some frames may be dropped when bandwidth is not sufficient.

When done with the configuration, click the **Apply** button.

Dynamic Intra frame period

High quality motion codecs, such as H.265, utilize the redundancies between video frames to deliver video streams at a balance of quality and bit rate.

The encoding parameters are summarized and illustrated below. The **I-frames** are completely selfreferential and they are largest in size. The **P-frames** are predicted frames. The encoder refers to the previous I- or P-frames for redundant image information.

H.264/265 Frame Types

By dynamically prolonging the intervals for I-frames insertion to up to 10 seconds, the bit rates required for streaming a video can be tremendously reduced. When streaming a video of a static scene, the Dynamic Intra frame feature can save up to 53% of bandwidth. The amount of bandwidth thus saved is also determined by the activities in the field of view. If activities occur in the scene, firmware automatically shortens the I-frame insertion intervals in order to maintain image quality. In the low light or night conditions, the sizes of P-frames tend to be enlarged due to the noises, and hence the bandwidth saving effect is also reduced.

Streaming a typical 2MP scene normally requires 3~4Mb/s of bandwidth. With the Dynamic Intra frame function, the bandwidth for streaming a medium-traffic scene can be reduced to 2~3Mb/s, and during the no-traffic period of time, down to 500kb/s.

Smart codec effectively reduces the quality of the whole or the non-interested areas on a screen and therefore reduces the bandwidth consumed.

You can manually specify the video quality for the foreground and the background areas.

Slide bar to the right - higher quality in the ROI areas

Slide bar to the left - higher quality in the non-ROI areas.

Select an operation mode if Smart codec is preferred.

- Auto tracking: The Auto mode configures the whole screen into the non-interested area. The video quality of part of the screen returns to normal when one or more objects move in that area. The remainder of the screen where there are no moving objects (no pixel changes) will still be transmitted in low-quality format.
- **Manual**: The Manual mode allows you to configure 3 ROI windows (Region of Interest, with Foreground quality) on the screen. Areas not included in any ROI windows will be considered as the non-interested areas. The details in the ROI areas will be transmitted in a higher-quality video format.

As illustrated below, the upper screen may contain little details of your interest, while the sidewalk on the lower screen is included in an ROI window.

As the result, the lower screen is constantly displayed in high details, while the upper half is transmitted using a lower-quality format. Although the upper half is transmitted using a lower quality format, you still have an awareness of what is happening on the whole screen.

- **Hybrid**: The major difference between the "Manual" mode and the "Hybrid" mode is that:

In the "**Hybrid**" mode, any objects entering the non-interested area will restore the video quality of the moving objects and the area around them. The video quality of the associated non-interested area is immediately restored to normal to cover the moving objects.

In the "**Manual**" mode, the non-interested area is always transmitted using a low-quality format regardless of the activities inside.

Quality priority: (Help)

- Quality priority: Use the slide bar to tune the quality contrast between the ROI and non-interested areas.

The farther the slide bar button is to the right, the higher the image quality of the ROI areas. On the contrary, the farther the slide bar button to the left, the higher the image quality of the non-interested area.

In this way, you may set up an ROI window as a privacy mask by covering a protected area using an ROI window, while the remaining screen become the non-interested area. You may then configure the non-interested area to have a high image quality, or vice versa.

You should also select the Maximum bit rate from the pull-down menu as the threshold to contain the bandwidth consumption for both the high- and low-quality video sections in a smart stream.

Audio

The Audio window allows you to configure all audio codec, sampling rate, and Microphone input gains. Depending on design of the camera models, some codecs may not be available. Also, there are cameras that come without embedded mircrophones.

3-5-5. Settings - Camera - Image

Display

The Display window allows users to tune the image display options:

1. Video name: the video name is displayed on the title bar that is displayed on each view cell. The screen shot below shows a name as "Speed dome."

1.00 Speed donie Camera 01	2014/04/10	11:19:09	
-------------------------------	------------	----------	--

- 2. Video name and timestamp: Default is enabled. If enabled, the video name and time is displayed on the view cell.
- 3. Color: Select color or black and white display.
- 4. Power line frequency: Depending on power line frequency of your country, select a matching option, NTSC 60Hz or PAL 50Hz, to avoid image flickering due to unmatched electricity.
- 5. Video orientation: select these options if the image from camera needs to be vertically or horizontally flipped.
- 6. Click Restore to poll for the original settings or click the Apply button to finish the process.

Day/Night settings

Switch to B/W in night mode

Select this checkbox to enable the Network Camera to automatically switch to Black & White display during the night mode.

IR cut filter

With a removable IR-cut filter, this Network Camera can automatically remove the filter to let Infrared light pass into the sensor during low light conditions.

- Auto mode (The Day/Night Exposure Profile will not be available if Auto mode is selected) The Network Camera automatically removes the filter by judging the level of ambient light.
- Day mode

In day mode, the Network Camera switches on the IR cut filter at all times to block infrared light from reaching the sensor so that the colors will not be distorted.

Night mode

In night mode, the Network Camera switches off the IR cut filter at all times for the sensor to accept infrared light, thus helping to improve low light sensitivity.

Image settings

The Image adjustment window allows users to tune the basics about image display options:

- 1. Color: Select to display image as color or black and white.
- 2. Brightness.
- 3. Saturation.
- 4. Contrast.
- 5. Sharpness.
- 6. High TV line, Gamma curve, low light compensation, etc. The rest of the options depend on the lens and image sensor type of each individual camera. Therefore, the options here can vary. For unique options coming with each individual camera, please refer to their User Manuals for more information.

Click Restore to poll for the original settings or click the **Apply** button to finish the process. For features common among cameras, you may select the **Apply to all cameras** checkbox.

Scheduled:

Configure a different image settings for a different span in time, such as the night mode, with a different lighting condition.

Exposure:

<u>Enable WDR Pro</u>: This refers to the Wide Dynamic Range function that enables the camera to capture details in a high contrast environment. Use the checkbox to enable the function, and use the slide bar to select the strength of the WDR Pro functionality, depending on the lighting condition at the installation site. You can select a higher effect when the contrast is high (between the shaded area and the strong light behind the objects).

<u>Enable WDR enhanced</u>: This function allows users to identify more image details with an extreme contrast from an object of interest with one shadowed side against a bright background, e.g., an entrance. You may select the **Enable WDR enhanced** checkbox, and then adjust the strength (low, medium, high) to reach the best image quality.

Focus:

<u>Enable WDR Pro</u>: This refers to the Wide Dynamic Range function that enables the camera to capture details in a high contrast environment. Use the checkbox to enable the function, and use the slide bar to select the strength of the WDR Pro functionality, depending on the lighting condition at the installation site. You can select a higher effect when the contrast is high (between the shaded area and the strong light behind the objects).

<u>Enable WDR enhanced</u>: This function allows users to identify more image details with an extreme contrast from an object of interest with one shadowed side against a bright background, e.g., an entrance. You may select the **Enable WDR enhanced** checkbox, and then adjust the strength (low, medium, high) to reach the best image quality.

5. Wait for the scan to complete. After a short while, the clearest image obtained should be displayed and the optimal focus range achieved. Use the arrow marks on the sides to fine-tune the focus if you are not satisfied with the results. You may still need to use the arrow marks to fine-tune the focus depending on the live image on your screen. ">" means moving from wide to tele end; and "<" tele to wide.</p>

The methodology of using the Resize Buttons at the upper left corner of the streaming window is the same as that on the home page.

Exposure, Focus, Privacy mask, Lens

For specific image settings, refer to the camera's documentation for details. Cameras coming with different lens or zoom modules will display different configuration parameters.

3-5-6. Settings–Smart VCA Detection

Motion Detection

To set up a detection window:

- 1. Select a camera by a single click.
- 2. By default, the camera height as shown on the NVR is set to AUTO. You can also enter the installation height of the camera. The message will prompt asking for a correct height information.

•)								
o		01 - Camera 01

					Vehicle detection			
							High	
					Low		High	

- 3. Select a detection type: Intrusion detection, Line crossing detection, or Loitering detection.
- 4. Click Select.

5. Click and drag to draw a rectangular detection window.

When you are configuring a detection rule related to people detection (e.g., Intrusion, Loitering, or Line crossing), you can not place a border point outside the People Detection area. Smart VCA invalidates any clicks outside the area.

The Detection area of fisheye camera running a Smart VCA package is shown below.

The Vehicle detection area is slightly different using a different object analysis algorithm.

For a fixed dome or bullet camera, a simulated floor level (People Detection area) is displayed on a Smart VCA configuration screen. The Smart VCA detection zones must be configured to have men walking through this area (their feet within the area).

6. Click the **Apply** button for the configuration to take effect.

3-5-7. Settings-Camera-Motion Detection

Motion Detection

To set up a detection window:

- 1. Select a camera by a single click.
- 2. Use the PTZ panel to move to a field of view where you want to place a detection window.
- 3. Click and drag to draw a rectangular detection window.
- 4. Pull the detection area level up to a preferred position. An object must be larger than the detection area to trigger an alarm.
- 5. Select a Sensitivity level using the slide bar.
- 6. Click the **Apply** button for the configuration to take effect.

The sample screen shows a connection with a speed dome camera.

If you already configured Preset positions, expand its menu and click on the presets to move to a position.

3-5-7. Settings - Camera - PTZ settings

To configure PTZ preset positions:

- 1. Select a PTZ camera by a single click.
- 2. Use the PTZ panel to move to a field of view where you want to designate as a preset position.
- 3. Click the add button, and enter a name for the position. Press Enter to proceed. Repeat the configuration to create more positions.
- 4. Click the Apply button for the configuration to take effect.

Note that the PTZ panel can vary with different PTZ cameras.

To configure a patrol:

- 1. Click to enter the Patrol menu. Select a preset position if you want to change its position on the patrolling order.
- 2. Click the up and down buttons to change the position on the order, or click the remove button to disband a position from the order. You can also change the interval to stay before moving from one position to the next position.
- 3. Click the **Apply** button for the configuration to take effect.
- 4. You may then click on the Preview patrol button to see if it runs as expected.
- 5. Click on the Back to preset list button to return to the preset window.

Fisheye camera has its unique options such as the mount types. Please refer to page 188 or the camera's User Manual for fisheye display mode options.

01 - Camera 01	4	
02 - Camera 02		Video name:

04 - Camera 04		Powerline 50Hz • 60Hz frequency:
		Video orientation: Flip Mirror
		Fisheye mount type: 🔾 Ceiling 🔵 Wall 🔵 Floor

3-5-8. Settings - Camera - Port forwarding

You can associate an external port number to the cameras managed by the NVR. You can then configure the router, virtual server or firewall, so that the router can forward any data coming into a pre-configured port number to a network camera on the private network, and allow data from the camera to be transmitted to the outside of the network over the same path.

From	Forward to
122.146.57.120:8000	192.168.2.10:80
122.146.57.120:8001	192.168.2.11:80

When properly configured, you can access a camera behind the router using the HTTP request such as: http://122.146.57.120:61001

If you change the port numbers on the Network configuration page, please open the ports accordingly on your router. For example, you can open a management session to your router to configure access through the router to the camera within your local network. Please consult your network administrator for router configuration if you have troubles with the configuration.

	Device v	Camera IP	External port
vent	01 - Camera 01	169.254.9.108	61001
	02 - Camera 02	169.254.8.92	61002

- NOTE:
- 1. This port forwarding feature does not support legacy cameras connected via the RTSP method.
- 2. The configurable range of port numbers is between $61001 \sim 61128$.

3-5-9. Settings - Camera - Update firmware

Prepare the camera firmware files in a USB thumb drive. Connect the thumb drive to the NVR's USB port.

Select a camera, and click the upload button.

	1				
Recording	Updated firmware V	Devices	IP	Model	Current version

An upload panel will appear. Select the firmware file. Click the Upload button.

The Batch upload function allows you to update the firmware of multiple cameras. The firmware update can take place on up to 8 cameras at a time. The Waiting... message will display for cameras that are waiting for the update to take place.

Different messages can appear with different update results.

3-5-10. Settings–Alarm–Alarm

The events reported from individual cameras' digital inputs, digital outputs, and motion detection can be accommodated in the NVR system's alarm settings. These events will then be reported or trigger corresponding actions as follows:

- 1. **Record** the video by the time the event is triggered.
- 2. Reporting events via **Email** with **snapshots** attached.
- 3. Sound the onboard **buzzer**.
- 4. Triggering video snapshot and text message by the occurrences of events to an **FTP** site.
- 5. Triggering a camera's **DO**.
- 6. Triggering a **PTZ** camera(s) for its lens to move to a **preset** position.
- 7. Sending notification to the VSS CMS software.
- 8. Sending a full screen live view on the connected monitor.

You can create up to 10 instances of alarm.

Hardware connections to DIs or DOs, e.g., window sensors, should be made separately. The motion detection configuration can be made in the Camera configuration window.

•)			1. Status	>	2. Trigger	3. Action	4. Schedule

To create an alarm,

1. Click on the Add button (+

	+ - New alarm	1. Status 2. Trigger: 3. Action	4. Scheatule
	New alarm		
Email		Enable alarm: ✓ Alarm name: <u>New alarm</u> Triggered duration: 10 ✓ 9	sec(s)
		K	

You can manually enter a name for the current setting. You can enter up to 16 numeric or alphabetic characters for the name, including symbols such as [0-9][a-z][A-Z][_][]. You can also designate the interval between one alarm and the next triggered alarm to avoid the situation that the alarms can be too frequently triggered.

Click on the next button > to proceed.

Please note that on a fisheye camera's Motion window, you can click and move the corner marks of a window to change its shape. The Motion window does not have to be a square.

3. On the Trigger window, select system triggering conditions, or one or more cameras by selecting their checkboxes. The number of DI or DOs on each camera is automatically detected and displayed through individual checkboxes. The Motion detection function, if there are many detection windows configured on a camera, is all triggered by one checkbox.

Note that the triggering sources will be listed even if the camera is currently not connected.

You can also find the "RAID degraded" option, which can be triggered when RAID is corrupted or undetected. In addition, the "Video loss (for video server only)" option (see the above red box) will be available if connecting to a video server.

You may also select the "Copy trigger from" menu to borrow the setting you previously configured.

Click on the next button \geq to proceed.

- 4. On the **Action** window, you can select the Action type from a drop-down menu. The configuration details of each action type is discussion below.
- 4-1. **Recording**–When an event is triggered, the selected camera will record a video footage of the length defined by the pre-/post-event setting, to the NVR system.

4-2. **Email**–The Email action sends an Email to the administrator along with a snapshot of the event.

To configure Email notification, enter valid Email addresses as the Sender and Recipient addresses, an Email subject, and the SMTP server address through which the Email will be delivered. If you need to log in to SMTP server to deliver an Email, enter the User name and password for access to that account.

								Abbiy

The Email subject and addresses can be composed of 254 characters in numeric or alphabetic characters including: [0-9][a-z][A-Z][_][][-][.][,][@]. You can enter the addresses of multiple recipients. Use semicolons, (;), to separate the addresses of multiple recipients.

4-3. Buzzer - The buzzer is sounded on the occurrence of the event. The buzzer tones are categorized into: Critical (1 long, 1 sec interval) Major (1 long 2 shorts, 1 sec interval), Normal (3 shorts, 2 sec interval), Minor (2 shorts, 2 sec interval), and Notify (2 very shorts) depending on the importance of an event. Select a Buzzer modulation from the drop-down list.

A long tone has a duration of 1 second, while a short tone 0.5 second. A very short tone lasts only for 0.1 second.

Select how many times the buzzer tones will be repeated on the occurrence of an event.

1. Status	2. Trigger	3. Action	4. Schedule
Copy action from	New alarm	~	
Action type:	Buzzer	~	
Buzzer severity:	Normal	~	
Repeat times:	10	~	

If events of different importance are issued at the same time, e.g., one major and one minor event, system will ignore the minor event and sound the buzzer tone for the major event only. The buzzer can be sounded either by the Alarm actions or the system events. If Alarm actions and system service events occur at the time, Alarm actions have the higher priority.

If multiple Alarm actions occur, the currently-sounded events can be depleted by the new event.

There are conditions that the system will sound the buzzer, and the conditions are not configurable.

- 1. Disk failure missing drives or SMART detected failures.
- 2. Disk full the free space is too small for recording tasks.

4-4. FTP–Snapshots from specified cameras can be uploaded to an FTP site on the occurrence of an event. Enter the FTP site address in the dotted-decimal notation, e.g., 159.22.151.20. Enter the login name and password for the user account. You can enter a directory name you prefer on the FTP site. The server port default is 21, a different number between 1025 and 65535 can also be assigned.

The snapshot thus delivered has a size of 320x240 pixels.

If authentication is not applied, login will proceed using the [anonymous] account.

The file names of the snapshot jpeg files will look like this:

[MAC]_[DATE]_[TIME]_[CAMERA_INDEX].jpg - If similar files already exist, an additional index number will be added to the end of file name.

1. Status	2. Trigger	3. Action	4. Schedule

 01 - Camera 01 02 - Camera 02 03 - Camera 3-FD 04 - Camera 04 	FTP Server: Port: 8 Authorization:	21 Enable	
	Upload folder:	/ Upload test fil	e

4-5. Camera DO - A triggered alarm triggers a camera's DO, e.g., an alarm siren.

4-6. **Camera pan-tilt-zoom** - A PTZ capable camera can move its lens to the preset position in case of a triggered alarm. For example, a triggered sensor may indicate an area of interest has been intruded, and a camera's field of view should be moved to cover that area. The precondition is that you properly set up preset positions on your PTZ cameras using a local or a web console.

4-7. **System DO** - A triggered alarm can be used to toggle the NVR's digital output, e.g., to sound an alarm siren.

4-8. **VIVOCloud app notification** - A triggered alarm can be used to toggle an event notification to the VIVOCloud utility. You will then be able to receive event notifications from your cell phone.

0

Ĥ

L

4-9. **Send to CMS**–An event message will display on your VSS CMS software in the event of GPS signal loss or G-sensor force exceeds configured thresholds.

The triggered alarms can be found in the Alarm search panel.

You should also configure a corresponding alarm on the VSS server. Enter the Alarm management window. Select System Event and begin your configuration.

Select NVR and a triggering condition, such as the GPS diconnect, as your trigger.

- 6. Click **Finish** to end the configuration.
- 7. Repeat the process above to create more alarms according to the needs in your surveillance deployment.

3-5-11. Settings - Alarm - Email

This window provides an interface where you can configure the connection to a Mail server. Via the Mail server, the system can deliver Emails containing system alarm messages to multiple receivers. A reachable Mail server and Email accounts must be provided before you can apply the settings.

•					
ф					
-		Outgoing mail server

	Email	Secure connection	🔾 TLS 🕘 SSL		
÷		Vsername			
0))		Password			
-		Sender			
		Email		Pa -	
0					
齫					

The configuration options are identical to those found in the Email configuration in Settings - Alarm window.

3-5-12. Settings–System–Information

On this window, you can configure the following:

- 1. Change the system name. Using a name in different languages is supported via a web console.
- 2. Select the UI text language.
- 3. Configure system time, time zone, and if you are connected to a DNS server where Auto Daylight Saving time can be applied, you can acquire the associated setting from a server within your network. You can use the Auto Setup button to automatically update the daylight saving configuration. A system reboot is required.

You can also manually update the daylight saving profile in the GZ format using the Import file button below.

4. Click the Apply button for the configuration to take effect.

Note that if **NTP** time server configuration (Auto) is preferred, the system will automatically configure all cameras to be listening to the system, and therefore to the same time server.

•)		Name and language					
ф							
			ND9213P English				
		cangoage	rogan				
A		Time

	Customer support						

Changing system time can produce disruptions to the existing recordings. Turning the current system time back to a time when video recording was taking place can generate duplicate files. And those files may not be playable.

3-5-13. Settings–System–Maintenance

If the need arises for updating system firmware, acquire the update from VIVOTEK's technical support or download site. Locate the firmware binaries, and click the Import button. The upgrade should take several minutes to complete. Note that during the upgrade, the recording task will be interrupted. A system reboot will ensue whether an update is successful or not.

On this window, you can perform 4 maintenance tasks:

- 1. **Update firmware**–Download firmware and save it to a USB drive in the FAT format, attach the USB device to the NVR for firmware upgrade.
- 2. **Update device pack**–A device pack allows you to import associated configurations and parameters for new camera models so that these cameras can be integrated into your NVR configuration. The information in the device pack is related to some tunable parameters.
- 3. **Backup**–You can backup your system configuration using the Backup function. Click Backup, a message window will prompt. Click Save to preserve your system configurations.

Select a location for your backup file, then click Save to complete the process. If you back up to a USB thumb drive, that thumb drive must be formatted using the FAT format.

Note that the backup action does not involve the following:

- 1. Recorded videos and database,
- 2. Alarm records, bookmarks, and bookmarked footages.

4. **Restore**–If you have a previously-saved profile, you can restore your previous configuration. Click the Restore button.

A file location window will prompt. Locate the backup file, and click Open. The Restore process will take several minutes to complete, and system operation will be interrupted during the process.

5. **Restore to factory default**–Restores the NVR to its factory default status by deleting all data and configuration files on HDDs.

3-5-14. Settings - System - Display

On this page, you can configure the system to consecutively display (rotate) cameras' view cells on the Liveview window. For example, if you have 8 cameras in 2 2x2 layouts, the rotation can let you see the live views of all cameras by every few seconds.

If you have a 4K monitor, select the display resolution to 3840 x 2160.

You can also enable or disable the Alarm notification.

To enable the rotate function, click on the rotate button on the layout panel.

3-5-15. Settings - System - PoE management

When IP cameras are connected to the NVR's PoE ports, their power consumption is constantly monitored, and the power budget is displayed on the PoE management screen.

The following apply to the PoE connections and PoE management:

1. The total power budget is:

50W

- 2. Cameras will be automatically enlisted to the NVR. The PoE connection status is polled every 10 seconds.
- 3. The maximum output for each port is 30W. If you attach a camera with a very high power demands, e.g., a speed dome with IR lights on, PoE power will simply be disabled on that port.
- 4. PoE Plug and Play takes effect after the initial setup. Any cameras connected thereafter will automatically join the NVR configuration. If you manually delete a camera from list, you should unplug and then re-connect it to the PoE port before joining the network back to NVR.
- 5. The above does not apply to ONVIF cameras.
- 6. For devices that come with multiple video channels, e.g., a video server, each video stream will occupy a video channel.
- 7. You can manually enable or disable the PoE output on each port.
- 8. If port #1, #3, and #4 are connected to powered devices, and power runs short on the NVR. The ports with smaller port number, e.g., port #1, will be powered first. The ports with a larger port number will be disconnected first. In this case, port #4 will be disconnected.

			Port	Name	Power used (Watt)	PD Class	
		ON O	1	8	0.0	5	
1	nformation	OX D	2	Camera 01	9.2	4	
	Maintenance	0	3	2	0.0	5	
			4	Camera 02	5.5	4	
ţ	Xsplay	ON D		ist.	0.0	5	
	PoE management	010		Camera 04	6.4	4	
			7	34 	0.0	5	
. 1	JPS .			Camera 05	2.1	2	
t	og		9	3 22	0.0	5	
	//VOCloud service		10	2 9	0.0	5	
	140Cloud service		12	-	0.0	5	
(Lustomer support		13		0.0	5	
		OND	14	3 1	0.0	5	
			15	94	0.0	5	
		ON D	16		0.0	5	

- 9. The PoE automatic enlistment does not apply for cameras that come with preset credentials, namely, password-proteced.
- 10. The PoE port status can reflect the following situations:
 - A. PoE enable PoE is working (port icon displayed in green on the upper-right screen)
 - B. PoE turned OFF PoE manually disabled (turned to OFF)
 - C. PoE turned OFF –Port power overload (under camera name)
 - D. PoE turned OFF Total power overload (under camera name)
 - E. PoE turned OFF Abnormal power supply voltage(under camera name)
 - F. PoE turned OFF –Non-standard powered device (under camera name)
 - G. PoE turned OFF –Port error (under camera name)

The UI text on PoE power consumption will turn red if the total power budget is exceeded. A warning event message will be delivered as push notification or via email.

11. When the NVR has little reserved power budget, and you attach a new camera, the NVR will stop supplying power to the new camera.

3-5-16. Settings - System - UPS

On this page, you can configure the system to gracefully shut down when UPS battery is lower than a certain level. You may also let it shut down when the estimated sustainable time is reached. We support APC Black 500 UPS.

3-5-17. Settings - System - Log

System logs are categorized as **System**, **Recording**, **User**, and **Error**. To display system logs, select a range of time and click on the Search button.

	Storage	Display	Step 1 Enable VORTEX Connect.
\bigoplus	Network	PoE management	Step 2 Please download the VORTEX app or open the VORTEX portal.
	Applications	UPS	Step 3 Go to "Add devices" and add this NVR by scanning the QR code or entering the device ID.
i	Information	Log	Device ID 0002D1A35CBD
		Cloud service	
		Customer supp	Existing VIVOCloud users? How to transfer from VIVOCloud to VORTEX Connect?

3-5-19. Settings – System - Customer support

If users encounter problems with the system, they could export a debug report and send it to VIVOTEK's technical support.

With an Internet connection, users can also open the Remote access functionality. An access ID will be generated. They can send the ID to VIVOTEK's technical support for the support to remotely examine system configuration and errors. Note that you should only allow remote access when you need the technical support to access and diagnose system errors. There is a 60 seconds initial timeout when trying to connect to the cloud server.

The remote access will automatically be disabled after 14 days if it is not manually disabled after the debug. You should not disable the remote access while the debug process is taking place.

•)		Customer support includes log generation tool and remote access, allowing VIVOTEK technical support engineers to quickly view, diagnose, and resolve
¢.		technical issues on your NVR.
-1		Notices: 1.Enable remote access only when you are being asked by VIVOTEK technical support engineers. 2.Provide debug logs, access ID along with NVR account and password only to VIVOTEK technical support engineers. 3.Remote access will be automatically disabled after 14 days.

If network unavailable message is displayed at the lower screeen, the network connection between NVR and cloud server may have failed.

3-5-20. Settings-User

The User window allows you to create more users, to change user password, and place limitations on users' privileges and administration rights. Up to 16 users can be created, including the default administrator.

- 1. By default, there are two user groups: Administrator and Regular user.
- 2. The regular users cannot access the **Settings** window, meaning that regular users can not add or remove cameras, make changes to alarm, network, and all other system settings. When users try to access the Settings window, the login window prohibits regular users to log in. There is simply no regular user's name on the login window.
- 3. The administrator users can access all cameras recruited in the configuration; while the regular users can be configured to have access to some or all cameras.
- 4. The system blocks out the video feeds from users who are denied of the access to particular cameras. The alarms and the alarm-triggered recordings from those cameras will also be inaccessible for unauthorized users.

		+ = Current user # admin	Usemame	New user New password Confirm password				
-		Other users New user	Group	Regular user	admin			
• ()) 🔅 🏢 🗢	User Login / Logout		Camera access	Authoritation 01 - Camera 01 02 - Camera 02 03 - Camera 03 04 - Camera 04				
40			P\$			Camera access	Authorization 01 - Camera 01 02 - Camera 02 03 - Camera 03 04 - Camera 04	
							Apply	

MIMPORTANT:

The default administrator name and password are: admin and admin. It is highly recommended to change the default password to prevent unauthorized access to the system.

To create or edit users,

1. Select a User group by unfolding its pull-down menu. Select either an Administrator or regular user as the user group.

+ =	Username	New user				
		New password				
Current user		Confirm password				
¥ admin						
- Jurini

		16 - Camera 16		
		17 - Camera 17		

- 3. If you are creating a regular user with limited access to cameras, deselect the checkboxes by the cameras to deny the user access.
- 4. Click **Apply** to close the configuration window. Repeat the process to create more users.

3-5-21. Settings-User-Login / Logout

Login

1. Login required to view live streaming: If selected, users will be required to enter his/her credentials before displaying a live view. If not selected, the NVR displays live view first. Login will be required when performing specific tasks, such as entering the Settings page.

Auto Logout should also be enabled when the NVR can be left unattended for an extended period of time. Default is 10 minutes.

Camera views will be available for users according to their privilege settings as designated in the User account configuration. Some camera views will be available for some users, while others are not.

2. Move authorized cameras to the beginning of live view (regular users only): For users who have access to specific cameras only, he will be required to enter his credentials before viewing a live view.

Logout

1. Enable auto logout: By default, a user is logged out automatically after being idle for 10 minutes. If not selected, the NVR will not log out automatically. A user can only log out manually.

3-5-22. Settings–Storage

The storage page displays the volume information including physcial position, total capacity, used and free space, and associated commands such as Format and Delete. Since each volume contains only 1 hard drive, detailed information about the hard drive is also displayed on this page.

You can format an existing storage volume in situations such as when you need to re-deploy the system elsewhere.

•)		-			Delete
ø		9÷	Volume 1 Single disk		Format
-		Volume 1 Disk 4	Capacity: 184 GB 🔯 Used: 154 GB	Free: 30 G8

			SMART.		
Û			Status: Attribute name:	Passed Raw Read Error Rate	
tes.			Value: Worst: Threshold:	200 De 51	

Disk Information:

Model family: The brand name of the HDD manufacturer.

Device model: The disk model name.

Serial number: Serial number assigned to the disk drive.

Firmware version: The version of firmware running on this disk drive.

Last check: The bad block check or S.M.A.R.T. test previously executed on this drive.

Status: S.M.A.R.T. status polled from the disk drive. This is not the results from a manuallyexecuted S.M.A.R.T. test. Attribute: The various attributes can vary from different HDD manufacturers.

Value: Value for the currently selected attribute.

Worst: Worst value acquired for that attribute.

Threshold: A predefined threshold or triggering value. The threshold below which the normalized value will be considered exceeding specifications.

Raw value: The detected parameters for that attribute.

Status: The judgement made to deem the current reading as OK or failed.

Disk1 🚺			Verify
Capacity: 149 GB

Worst:			
Threshold:			
	Start Stop Count		
	Start Stop Count Reallocated Sector Ct		
		_	
	Reallocated Sector Ct		
	Reallocated Sector Ct Seek Error Rate		

Verify:

Three types of check disk actions can be initiated through this button.

Note that disk verify function requires a volume to be temporarily disabled; namely, the video recording will be stopped before disk verify can be performed.

Bad block check: Performs read/write test to drive sectors to locate bad blocks. This action may take several hours to complete.

Fast S.M.A.R.T. test: Tests the electronic and mechanical performance and disk read performance, including those on disk buffer, read head, seek time, and integrity of drive sectors. The short test is performed on a small section of disk platters, and takes about 2 minutes to complete.

S.M.A.R.T. long test: The long test is more thoroughly and is performed to all drive sectors. The actual completion time depends on drive sizes and the attributes put to test.

The Check disk functions mentioned above, when performed during active I/Os, can consume system resources and cause dropped frames with the recording tasks.

On this configuration window, a "disk" refers to a physical disk drive, a "volume" refers to the logical configuration of disk drives which may include multiple disk drives.

MIMPORTANT:

There are conditions that disk drives will not be available for storage configuration:

- 1. The disk drives are performing the Verify process.
- 2. The disk drives considered as "failed" drives by the S.M.A.R.T. self detection.

Restore volume:

Volume restoration allows users to backup and restore recording files, logs, and other data from a pre-established volume with hard disks on an NVR device to another NVR device. For example, HDDs on an NVR can apply the restore volume feature to reserve the original data (such as videos and logs). These HDDs can then be installed on another NVR. For example, NVR A has three HDDs using RAID0. You can select these three HDDs from NVR A, then restore these three HDDS on NVR B (even using a different slot arrangement; without any volume created).

i Series		New volume Proce v	
Schedule backup		Create new volume The data yorks that will be reveal offer unwally entropy to the set of the data in the set of the unwally the set of the best best unwalls the set of the set	
0 Iu			

NOTES:

- This NVR supports volume restoration regardless of the hard disk's slot position on the original NVR. This function only supports data restoration between ND9442P, ND9542P, ND9326P, and ND9426P models. Data restoration is limited to the maximum number of hard drives supported by the target device.
- 2. When restoring data to NVR B, please select the hard disk and configure the RAID settings to match the original configuration on NVR A.
- 3. Clear the target device before starting the restoration process to avoid data conflicts.
- 4. The backup process supports one volume at a time.

- 5. The following types of data can be backed up with the volume restoration:
- System logs and customer support logs
- Alarms (alarm results only, excluding alarm settings)
- Recording data, including all video recordings and metadata
- Search results (encompassing alarm search, smart VCA event, smart search II, storyboard, attribute search, rule search, TMIS search, bookmark search, and counting data)

3-5-23. Settings - Storage - Scheduled backup

To configure a scheduled backup,

- 1. Select the Scheduled backup: Enable checkbox.
- 2. Server: Enter the server name or IP address of the FTP server.
- 3. Port: Enter the port number. Default is 21.
- **4. Path:** This is the destination folder/path if different than root.
- **5. Authorization:** Click the Enable checkbox, and enter the User name and Password for a private FTP server (no anonymous access allowed).
- **6. Test FTP:** Use the Test FTP button to see if your FTP server configuration is valid. If the connection is successful, an indicator will appear.

7. Daily backup time: Select a time to begin the daily backup from the number pad.

				Test FTP	
Daily backup time					
ïme:	10:0	1 🔓	^		
	1		3		
Back up recording Recording cameras:	4		6		
containing currier asi	7		9		
		0	×		
Recording time frames:	🙋 Apply	/			
	Clear				

8. Backup recording

Recording cameras: By default, all cameras' recordings will be backed up. Deselect one or several cameras if you prefer to back up the recordings of only the specific cameras.

Recording time frame: Select the time span within which the recordings occurred. The recordings within the time span will be backed up. Use the Applpy and Clear buttons drag your mouse cursor on the schedule pane to determine the effective hours on the schedule.

Connection: Select to enable the Upload limits by entering a number for the upper threshold of the bandwidth, e.g., 124 Kbps. Configure an upper threshold if your network bandwidth is of the concern.

<u>Enable</u>: Default is not selected. The scheduled backup function is not enabled by default. You must click to enable the configuration options.

<u>Type</u>: Currently the NVR supports the backup to an FTP server.

Enter the Static IP, domain name, and other parameters for access to an FTP server.

<u>Site</u>: the fully qualified domain name of a network host, or its IP address. The max. length is 253 characters. Note that hyphen "-" cannot be used at the beginning or the end of the address.

<u>Port</u>: The port that the remote FTP server listens on. The default ports (which are the most commonly used) are 21 for standard FTP and explicit FTPS, 990 for implicit FTPS. If necessary, change the port number. The range is $1 \sim 65535$.

<u>Path</u>: The path is effectively a pathname of a resource and corresponds to a series of FTP commands, such as a directory tree:"ftp://jon:apple@bigcompany.com". The applicable alpha-numeric characters are [0-9][a-z][A-Z][-][/][_], with a max. length of 64 characters. If not specified, destination will be the root directory.

<u>Authorization</u>: Click to enter user name and password for the FTP site. Click the Test FTP button to test a connection with the FTP server. The applicable alpha-numeric characters are [0-9][a-z][A-Z][-], with a max. length of 64 characters.

<u>Daily backup time</u>: Default is 2:00 AM. Click to reveal the pull-down menu to specify a time when the daily backup will take place, such as that system can perform the backup in the off-office hours when network load is lower.

<u>Backup Recording</u>: Select the Recording cameras each by a single click. The recorded videos from the selected cameras will be backed up according to your configuration.

<u>Upload limits</u>: If network bandwidth is of the concern, enter an upper threshold for the bandwidth.

Scheduled backup is starting
Scheduled backup has been completed successfully
Scheduled backup settings have been changed
Failed to connect to FTP server
Succeed to connect to FTP server
FTP server error (error code)

If the FTP backup errors occur, the system will retry the connection every 5 minutes until the connection is remade or cancelled. Error messages will display on every failed attempt. For errors not related to connection problems, retry takes place every 3 seconds for 5 times for each recording file. Error messages will display on every failed attempt.

In the event of backup failures, failures will be recorded into system logs. The possible causes can be:

- 1. The previous backup is not finished when the succeeding backup starts, due to very slow upload speed or network problems.
- 2. The on-going scheduled backup is cancelled.
- 3. Errors occur on the storage volume while the backup is taking place. For example, when the hard disk is disconnected, formatted, or the system detects an unconfigured volume.
- 4. Path errors. The destination directory does not exist.

When finished with the network settings, click on the **Apply** button.

A proceeding backup can be manually cancelled.

3-5-24. Settings - Network

Settings - Network - IP

<u>DHCP</u>: Default is selected, the server obtains an available dynamic IP address assigned by the DHCP server each time the system is connected to the LAN.

Manual setup: Select this option to manually assign a static IP address to the NVR.

Enter the Static IP, Subnet mask, Default router, and Primary DNS provided by your ISP.

<u>Subnet mask</u>: This is used to determine if the destination is in the same subnet. The default value is "255.255.255.0".

<u>Default router</u>: This is the gateway used to forward frames to destinations in a different subnet. Invalid router setting will fail the transmission to destinations in different subnet.

Primary DNS: The primary domain name server that translates hostnames into IP addresses.

Secondary DNS: Secondary domain name server that backups the Primary DNS.

When finished with the network settings, click on the **Apply** button.

The NVR comes with a default gateway and the cameras connected to the PoE ports are assigned with IPs within a separate network segment. The cameras connected to the PoE ports will be in a 10.1.1.x or 192.168.2.1 segment, automatically provided with subnet addresses.

The NVR's uplink port will listen to DHCP server by default.

•		Default gateway	🗿 Net 1 💮 Net 2

Settings - DDNS

VIVOTEK provides Dyndns.org, as a free DDNS dynamic domain name service for users who want access from the internet or a domain name service for the NVR. VIVOTEK maintains a database of product MAC addresses for the service, and you can apply one domain name for each NVR system.

•)				
4		DDNS	Enable	
			Provider	Dyndns.org(Dynamic)
			Host name:	
•			User name	
			Password	
÷				
())				
-	IP		14	
	DONS		14	
0	Service			
desi	HTTPS certificate			

DDNS Enable: Select this checkbox to enable the DDNS setting.

Enter a Host name, Email address, and password twice, and then click **Apply** to proceed.

Make sure you have internet access.

Click the **Register** button. The terms of service agreement window is selected from a checkbox at the

bottom. Click 🔛 to read the license agreement terms.

The acceptable characters for email address are: [0-9][a-z][A-Z][!][#][\$][%]['][*][+][-][/][=][?] [^][][][][][~][.]. Two successive periods, [..], are not acceptable. The address filed can accommodate up to 256 characters.

Use only alphabetic and numeric characters for the password. The maximum number of characters is 64.

When completed, a confirm message will prompt. You will also receive a confirm Email. You can now access your NVR system using the <u>xxxx.Dyndns.org</u> domain name address. Note that access from the Internet should be routed to the private IP assigned to your NVR, using methodologies such as port forwarding, etc.

Settings–Service

By default, the NVR service and video streaming are accessed via HTTP port 80 and RTSP port 554. You can designate a different port number if the need arises. Usually it is not necessary to change these ports. HTTPS encrypted connection is enabled by default.

•)		Service port		
¢		HTTP:	80	
		HTTPS:	443	
-1		RTSP;	8554	
•		VMS & App		
2		Allow access

				Inset.com
	DDNS	1	API service port 3443 Username	
i	Service		administrator	
-	HTTPS certificate	3	Account password	
ės.	HTTPS Certificate			

Instead of a web console, you can also access the NVR and the subordinate cameras using the **iViewer** and VIVOTEK's **VSS** software. The NVR can be managed as one of the sub-stations in a hierarchical device structure.

Set up a password for access from the VSS server before you can join the NVR to a VSS configuration. For access from the iViewer, you log in using the same user name and password for the login to the NVR.

Below is the screen showing the sub-station recruitment process from a VSS server.

VSS auto connection

NAT-traversal with OpenVPN

A remote connection between a VSS server and an NVR with 3G/4G/LTE network can be made through an OpenVPN tunnel. The figure below shows the methodology comprising HMAC authentication and TLS encryption over an encrypted UDP connection.

Sample installation steps are shown below:

Step 1: Install VSS by selecting the Server with OpenVPN option.

Step 2: Enable the public IP of the VSS Server.

For the NVR to establish an OpenVPN connection with the VSS Server, the user must activate the public IP of that server. (Note that the specific steps depend on the user's network environment and relevant IT policies.)

After activating the Public IP, ensure the accessibility of the HTTPS port and OpenVPN port. (Note that the VSS OpenVPN port by default is 3939, so the user must set up port forwarding with UDP.)

If the default HTTPS port (3443) is unavailable, the user must modify the corresponding port number under VSS Settings > Device > Stations. If the default port for OpenVPN (3939) is not available, the user needs to modify the configuration file of OpenVPN (located in C:\Program Files (x86)\VIVOTEK Inc\VAST\Server\OpenVPN\config\server\server.ovpn).

You can directly edit the port number in this text file (file content is shown below):

port 3939 proto udp dev tun ca ca.crt cert server.crt key server.key dh dh.pem server 10.6.0.0 255.255.0.0 topology subnet client-to-client client-config-dir "C:\\Program Files (x86)\\VIVOTEK Inc\\VAST\\Server\\OpenVPN\\ccd" keepalive 10 120 cipher AES-256-CBC max-clients 50000 persist-key persist-tun status openvpn-status.log log-append openvpn.log verb 3 mute 20 sndbuf 262144 rcvbuf 262144 tls-server compress lzo

Step 3: Configure the NVR OpenVPN connection.

Once you have obtained the VSS Server public IP, configure the NVR settings under Network > Service > CMS. Then, enter the VSS server public IP/credentials/API service port (HTTPS). (Note that if the HTTPS port on the VSS end is not 3443, you must modify the corresponding port number.)

After configuring the settings for VSS and NVR, the OpenVPN connection will be established. Once the connection is established, this NVR will be automatically added to the VSS server. (Note that the NVR and VSS server should have a similar time setting when exchanging certificate information. Otherwise, the mutual handshake authentication process may fail.)

3) (j			Auto update		IMPORTANT: THE FOLLOWING AGREEMENT ("AGREEMENT") SETS FORTH THE TERMS AN D CONDITIONS UNDER WHICH TREND MICRO INCORPORATED OR AN AFFLIATE LICEN
	Trend Micro IoT Security	Keep event data	60 days Must be between 1-365 days		SOR ("TREND MICRO") IS WILLING TO (A) LICENSE THE "SOFTWARE" AND ACCOMPANYI NG "DOCUMENTATION" OR (B) TO PROVIDE THE "PREMIUM SUPPORT SERVICES" TO "Y OU" AS AN INDIVIDUAL USER OR AN AUTHORIZED REPRESENTATIVE OF AN ENTITY. BY ACCEPTING THIS AGREEMENT, YOU ARE ENTERING INTO A BINDING LEGAL CONTRACT
Ø					WITH TREND MICRO. THE TERMS AND CONDITIONS OF THE AGREEMENT THEN APPLY T O YOUR USE OF THE SOFTWARE AND THE PREMILIM SUPPORT SERVICES AND RELATED SUBSCHIPTION SERVICES. PLEASE PRINT THIS AGREEMENT FOR YOUR RECORDS AND S
ės.					AVE A COPY ELECTRONICALLY. You must read and accept this Agreement before You install or use the Software or use the Premium Support Services. If You are an individual, then You must be at least 18 ye
N.					ars old and have attained the age of majority in the state, province or country where Y ou live to enter into this Agreement. If You are acquiring the Software or Premium Sup port Services on behalf of an entity, then You must be properly authorized to represent that entity and to accept this Agreement on its behalf.

To enable the security service,

- **1.** Click the Enable checkbox.
- 2. Read and confirm the Trend Micro End User License Agreement.
- Select whether you manually update the virus database (signatures) or let system automatically update the database. For installations at where no Internet connection is available, download Trend Micro's signatures to a USB thumb drive, insert the thumb drive to update. The current Trend Micro security package will expire on year 2020.

Please contact your sales representative if your security package expires.

4. Cybersecurity management for cybersecurity alert, event log, and event logging. The NVR comes with TrendMicro security package, and can receive cyber attack information from cameras. Also, these events can be collected by the VAST software.

3-8. Information

This window shows the revision number of the firmware running on this machine.

3-9. Limitation when working with VSS

- VSS cannot change the video channel settings managed by NVR.
- VSS cannot change the URL content added by RTSP.
- For the SD series with smart tracking, VSS does not support the smart tracking settings on the PTZ page.

Section 2: Management over a Web Console

Below are the requirements for using a web console:

- 1. i5 CPU or above with a minimum of 8GB RAM.
- 2. It is recommended to configure a sub stream in H.264, with a lower resolution of 640 x 360.
- 3. Use Google Chrome for the plug-in free access.

There are two different interfaces on the system:

- 1. One is connecting mouse and keyboard, and an HDMI cable to a TV screen or monitor. The local management thus made is described in the **User Manual** of each NVR model.
- 2. The other is accessed through the Ethernet connection. Management via a web console is described in this manual.

Note that when accessed over the network, the total streaming throughput is 24Mbps.

Access via an IPv6 address is supported by firmware revision 3.1. Note that for some browsers you should use the [and] brackets to surround the IPv6 address such as: http://[2001:db8:1234::abcd].

Chapter 4: Login and Getting Started

4-1. Login

This is the login page on the browser. The minimum for resolution is 1280x960.

Pleae use Google Chrome to access the NVR. By default, the web console opens with the new user interface.

	简体中文	

It is highly recommended that you should change the default password. Please refer to **Settings** > **Security** > **User account** page to see how to prevent unauthorized access. The system will prompt you if you entered an incorrect user name or password.

Password	A

Remember me: Your user name will be preserved in browser cookies for two days if you select the Remember me checkbox. The user name will be automatically erased if you do not log in to the system for two days.

You may login to a different software utility by unfolding the side panel on the Login button.

You can also select a different language using the Multilingual selector menu on the lower left corner of the Login screen. The functional items, menus, and dialogues will then be displayed using the selected language.

Login errors: below are the login errors that might occur.

User name	
admin	
Password	
	۲

A Login failure can result from the incorrect user name and passwords.

Login options:

You may also mouse over the Login button to display the login options. You can then enter the Liveview, Playback, or Alarm search window.

The NVR system features a simple UI structure which consists of a Liveview window, a Playback utility, and a system Settings window. Once logged in, you can move from one window to another by selecting the hot link buttons on the upper right of the screen.

The NVR supports plug-in-free web sessions using Chrome browsers.

MIMPORTANT:

- 1. Before operating the NVR, make sure you have properly installed hard drives and configured the storage volumes. Otherwise, you will not be able to operate some of the system's functionality.
- 2. When you log in to the Liveview or Playback interface to stream a live or recorded video, install the ActiveX plug-ins. If it does not prompt when you log in, install plug-ins when you try to playback a recorded video. You may then need to re-start the IE browser console.

4-2. Graphical Layout and Screen Elements - Liveview

Once you log in, the system defaults to the Liveview page, which provides access to other configuration utilities, live view screen, and other functional panels. The screen elements are described as follows:

Item	Name	Description				
1	Live view	Provides a glimpse of all cameras inserted into your configuration.				
2	Playback	Provides access to camera recordings.				
3 Search		Provides access to the Alarm search panel.				
4	AI Search	Provides access to the AI metadata search panel.				
5	Device list	All devices (cameras / video servers) that have been recruited into the configuration will be listed.				
6 Settings Provides access to system settings.		Provides access to system settings.				
7 View cell panel		The video feeds from cameras will be placed into view cells.				
8	Storage	Provides a glimpse of current storage usage.				
9	Notification	System notifications including system events and alarm notifications.				
10	Login/Log out	You can log out and log in again using another user role.				
11	Date & Time	Displays date and time. You can click to enter the date and time setting page.				
		When a view cell is selected, the camera-specific control (such as PTZ) and display options will be available here.				
13	Shrink / Expand	You can display or hide the side panes.				
14	Layout	Provides functions to extend, rotate, and redo the layout.				
15	Rotation mode	Click to enter the Rotation mode.				

	ltem	Name	Description
ſ	16	Page changer	Cick to move to the other layout page when your live views are distributed over
			many pages.
	17	Full screen	Enters the full screen with only the live views.

Each panel will be described in further discussions.

4-2-1. Device List Panel

The Device list displays the recruited cameras by the sequential numbering order you configured in the System Settings utility.

If a user logged in using a credential of a limited access, he may only see cameras that he can access instead of all of the cameras.

Camera Icon:

A mouse click on the camera name on the Device list brings forth the summary of IP address, model name, recording setup, DI/DO information, and other control elements on the right pane.

Once devices are added to the NVR, they will be listed. The device type will be automatically detected. Different types of devices will be given different types of device icons.

Different types of devices will be given different types of device icons. For example,

View Cell elements:

	0)	Ļ	0	14:50:03 2023/11/21
admin				Display
ADMINISTRATOR				^
Language			>	
Restart				
Log out				^

Only an administrator can change and preserve a custom layout, and every user can designate a specific layout to be displayed when he/she logs in. The default layout for each user is stored in a browser's cookies.

The available layouts are categorized into 4 types: Equal, Panorama, Focus, and Vertical. Equal: 1x1, 2x2.

Panorama: 1P(Panoramic)+6, 2P+3. (applies to fisheye cameras)

Focus: 1M+5, 1M+7.

Vertical: 1V+6, 2V+3, 3V. (applies to corridor view)

Note that a user who did not log in as an administrator can change a layout, but his configuration changes (with cameras placed on view cells) **will not** be saved.

4-2-3. Scene

A scene allows users to gather the live views from multiple cameras together into a comprehensive glimpse of view. For example, several cameras may have been installed to cover a specific area.

To create a new scene, click on the Create scene button.

You can change layout, enter a name for the new scene, and click and drag cameras into the layout. When done, click the Create button. ++

ND9541P		8	(^{11:19:09} 2020/09/18
Create new scene Select a layout and place camera to view cell.			×
Scene name	Create your scene	Change layo	ut 🎛
New scene			
Scene setup	1 Camera 01 ×	2 Camera 02 ×	
Devices ->			
Q. Search	3 Camera 03 ×	4	
● 1 - Camera 01 ● 1 02 - Camera 02 ◆ 03 - Camera 03		/1 >	+
	•	Set as default scene	-

In the Scene view, you can place 1 camera into multiple view cells. This applies when using cameras with a wide coverage area, such as fisheye or multi-lens cameras.

4-2-5. View Cell panel

A single view cell is shown below. Each view cell contains a video stream display area, information, and functional buttons. A view cell is displayed in Normal, Focused, or Maximized mode.

- 1. **A single click** selects a view cell from the View Cell panel, enables its function buttons, and turn it into the Focused mode.
- 2. A double-click maximizes the size of the view cell to the full of the panel.
- 3. The 2nd double-click shrinks the maximized view back into the focused mode.

Although the system automatically selects the video stream to display on the view cell, you can still manually select a different video stream from the Stream tab below.

To deselect a view cell and return to the normal view, click on the **Restore** (1/1) (1/1) (1/1) button at the lower screen.

Adding Cameras to View Cells

- 1. Click and drag a camera from the Device list to an unoccupied view cell.
- 2. Double-click a camera on the camera list. The camera will be added to the first available view cell.

To deselect a view cell and return to the normal view, double-click on the view cell. You can also click on another view cell to continue adding other cameras.

The system automatically adds cameras into view cells by their index numbers. If you prefer a different order and placement, use the **Scene** mode to create different placements.

Sometimes network problems can cause a view cell to be attempting to connect to a network camera. If the connection attempt takes a long time, it may result from network problems or incorrect configuration with video streaming. For example, you may have configured the camera to be streaming a 5MP stream. The NVR uses video main stream for recording, and the main or sub stream from cameras for live viewing. You should then open an individual web console to the network camera to change its video streaming configuration.

If the current layout already contain the max. number of cameras, e.g., 9 for the 4-CH model, the following message will prompt.

If you are using the 16-CH model, there can be more than 16 view cells across multiple layout pages, e.g., on the second page of the 1M+12 layout. Placing a camera in the 17th to 18th view cells will bring out the following message.

Control Pane

Click to select any of the view cells to activate its Control and Display panes. You can exert the following:

- 1. View basic information such as the IP address, Model name, etc.
- 2. Start a manual recording.
- 3. Take a snapshot.
- 4. Place a bookmark if you find something of your interest. The bookmark is preserved as a one-minute footage along with a short description of a particular incident. The precondition of using this function is that the video stream, while you are watching it on the view cell, must be recorded to the NVR at the same time.
- 5. Tune the audio volume.
- 6. Select a different stream.
- 7. Enable the Digital Zoom (using the mouse wheel).
- 8. Manually toggle the Digital Output.

194 - User's Manual

* For a **fisheye** camera, you can select a dewarp mode as a Regional view or a Panoramic view.

10 View (Original View)

1P (Panoramic view)

1R (Regional view)

The 1R mode (or rectilinear) provides access to one image section within the hemisphere. You can zoom in or out (using the mouse wheel or PTZ panel) or travel through to other areas within the hemisphere using simple mouse clicks and drags. A single click on a particular object can bring the object to the center of your view window. Click and hold down the left mouse button, and you can swipe the view both horizontally and vertically.

Note that if your fisheye mounting type is set to the **Wall Mount** type, your screen control in the view cell will be limited to 90° pan and tilt. Make sure your mounting type and camera settings have been properly configured.

Because fisheye lens can cover a wide surveillance area, you can insert a fisheye camera into multiple view cells, and let different regional views display in these view cells. In this way, you can have a glimpse of multiple areas of interest, and the configuration of these different view windows will be preserved when you save your layout settings.

* For a **PTZ** camera, scroll down to display the PTZ control panel where you can zoom, focus, pan, patrol, or move the camera lens.

On a live view of a PTZ camera, you can hold down the mouse button and move the cursor towards the direction you want to move. The mouse control is automatically enabled for PTZ cameras. As depicted below, the farther you move along the screen, the faster the lens module moves.

Auto pan/patrol controller: These buttons provides pan and patrol functions provided that preset locations have been configured on the camera. For a speed dome camera, the pan command tells the camera to continuously pan 360 degrees until it is stopped by a user command.

The **Stop** button ends a pan or patrol tour.

Display Pane

On the Display pane, you can configure the following:

- 1. Enable or disable the display of the Camera type, the small icon on the upper left of view cell.
- 2. Camera name and IP address. Select one or both.
- 3. Displays camera time.
- 4. Displays Camera status: Trend Micro IoT Security and Video content analysis. If your camera supports these features, you can choose to display them on the live view.

You can enable the display features on all view cells using the Apply to all view cells button.

4-3. Graphical Layout and Screen Elements - Playback

The screen elements of the **Playback** window are described as follows:

ltem	Name	Description
1	Camera List	Provides a glimpse of all cameras that have recorded data. Basic information is
		also provided along with a screenshot.
2	Calendar	Shows when the recording took place, and thus enables users to quickly locate
		a specific part of recording in history.
3	Layout contents	Provides functions to extend, rotate, redo the layout, and the synchronous
		playback.
4	Playback panel	Displays the playback functions. Snapshot, bookmark, and export functions are
		also available on individual view cells.

To begin playback and search for past recordings,

- 1. Single click to select a camera. You can select multiple cameras.
- 2. The **Calendar** panel will display the days video recording actually took place. And those days will be highlighted by a lighter text. Click to select the days with recordings.

Playback Panel

	Control buttons Timeline slider	
Time align	2020/09/21 11:35:15 S (II) ►I C - 1x + ⊄» (S) [] Export ∨

		6	Search results				

The screen elements of the **Playback** window are described as follows:

ltem	Name	Description				
1	Search	The whole panel provides access to search conditions. You can select Devices,				
	conditions	time span, pre-configured alarms, or trigger types.				
2	Calendar	Shows when the possible time of occurrence of alarms.				
3	Configured alarms	Select the alarms you previously configured on the system.				
4	Trigger types	There are many trigger types including system event triggers, cyber attacks, DI/ DO, or the numerous VCA detection triggers.				
5	Search results	The results are displayed by Alarm name, Time of occurrence, Trigger source, and the Trigger type.				

To begin playback and search for past recordings,

- 1. Single click to select a camera. You can select multiple cameras.
- 2. The **Calendar** panel will display the days video recording actually took place. And those days will be highlighted by a lighter text. Click to select the days with recordings.

Chapter 5: System Settings

The System Settings pages are made identical to those on the local console. Since the Setting pages are identical, the following pages will be omitted. Please refer to page 97 for the description of System Settings via a local console.

Some minor differences between the web console and local console exist. One is the Restore Factory default function. It is only available on the web console.

The restore function is not available on the local console, for users can use the reset button to perform the system default restoration.

Another difference is the ability to enter a camera or system name using languages other than English. The NVR's system name also supports the use of other lanaguages. This is only achievable through a web console.

The following characters are not supported: [>][<][)][(]["][%][;][#][&][+][-][\]

Safety and Compatibility

Federal Communications Commission (FCC) Statement

This Equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Warning:

[A shielded-type power cord is required in order to meet FCC emission limits and also to prevent interference to the nearby radio and television reception. It is essential that only the supplied power cord be used.]

[Use only shielded cables to connect I/O devices to this equipment.]

You are cautioned that changes or modifications not expressly approved by the party responsible for compliance could void your authority to operate the equipment.

[]: depend on EUT condition.

Information on Disposal for Users of Waste Electrical & Electronic Equipment (private households)

This symbol on the products and/or accompanying documents means that used electrical and electronic products should not bemixed with general household waste.

For proper treatment, recovery and recycling, please take these products to designated collection points, where they will beaccepted on a free of charge basis. Alternatively, in some countries you may be able to return your products to your local retailerupon the purchase of an equivalent new product.

Disposing of this product correctly will help to save valuable resources and prevent any potential negative effects on humanhealth and the environment which could otherwise arise from inappropriate waste handling. Please contact your local authorityfor further details of your nearest designated collection point.

Penalties may be applicable for incorrect disposal of this waste, in accordance with national legislation.

For business users in the European Union

If you wish to discard electrical and electronic equipment, please contact your dealer or supplier for further information.

Information on Disposal in other Countries outside the European Union

This symbol is only valid in the European Union. If you wish to discard this product, please contact your local authorities or dealer and ask for the correct method of disposal.
