

How to Replace and fit the Pump Rollers

Before starting

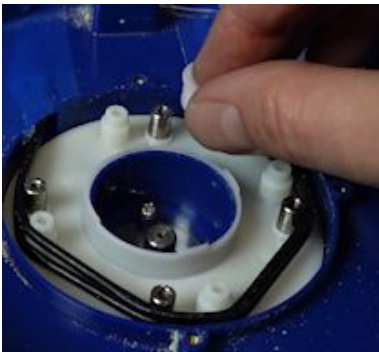

Remove power lead and pull tubes from the bottles and put them to one side
Remove the turntable and catch tray

What you'll need

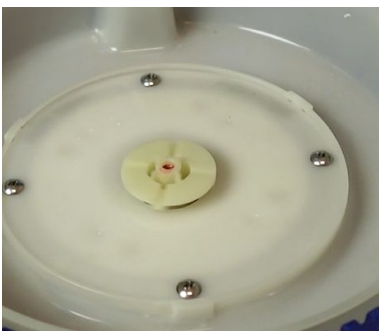

Small Phillips screwdriver

Instructions

With the lid in the open position make sure the 2 tubes are not crossed over and they are on the outside of the pins.

Now insert one roller onto the pin that is not touching the tubing and while holding the top so the roller stays in place spin the rotor until the next pin is free and repeat until all 4 rollers are in position

Now put the roller cover on and then screw down the pump cover. You can now put the catch tray back in place

If you unscrew and remove the shaft of the turntable you can see the pump spinning underneath
