

Water Purification

Water and Oxygen are essential to all life forms. Yet, water is seriously contaminated and the oxygen levels in today's environment have been depleted.

What is in your drinking water?

Are you?

Sick of buying bottled water

Concerned about impurities, bacteria and viruses

Tired and fatigued

Aware that chlorinated water suffocates and destroys the friendly bacteria the body

Dr Otto Warburg, Nobel Prize Laureate says "Sub optimal oxygenation of tissues and cells seen in cellular hypoxia, is not only the underlying cause of cancer but results in predisposition towards degenerative disease and is an outstanding factor in immunosuppressive illness. Therefore, it follows that OXYGEN will restore health".

OXYGEN TREATS THE CAUSE NOT THE SYMPTOMS

Water ... H₂O

A basic media of life

Composes approx 70% of the human body

A necessary vehicle to transport elements throughout the body

Pure water assists the liver and as such helps with weight control

Oxygen ... O₂

Increases energy levels in the body

Assists in rejuvenation and health of skin cells

Improves and increases digestive functions

Assists and strengthens the immune system

Stabilised electrolytes of oxygen (SEO)

Created with a base of pure energised water and combined elements of Sodium .

How it works and important considerations

Stabilised Electrolytes of Oxygen are made with a base of pure distilled and energized water creating a natural safe stabilised oxygen, loaded with energetic dissolved oxygen that can be used in any environment.

SEO has a pH of 9-10.5 when diluted in water. The pH is lowered rapidly to 7- 8pH. This lowering of the pH in water causes the separation of chlorite ions and oxygen molecules from the sodium atoms. By this action the molecules destroy microorganisms in water, making it the fastest water purifier that you can carry.

After ingestion, the stomach acid generates more oxygen that is molecular, chlorite ions, and minute quantities of chlorine dioxide. This process produces very large quantities of energetic dissolved oxygen to be absorbed into the bloodstream with specific oxide's of chlorite and chlorine dioxide destroying viruses, bacteria and protozoa.

In the bloodstream loaded with oxygen molecules, the pH takes an upwards swing by homeostasis, changing the chlorine dioxide back to the chlorite ion. SEO has a full life that scavenges free radicals ... making it the best option for oxygen therapies.

How Do I Use These Products

Stabilised Electrolytes of Oxygen (SEO)

For purification of water: Add 5-7 drops of SEO to 200ml glass or 25 drops per litre. DO NOT TAKE STRAIGHT OR UNDILUTED.

Formula Oxygen Spray (FOS)

Is diluted ready for use (10 drops of SEO in 100ml of distilled water). Spray on food drinking vessels or any item that may need to be purified. Use for personal hygiene, tooth brush, insect bites, tattoos & piercing, cuts, burns...anywhere infection may develop on any part of the body.

What are some of the benefits of Stabilised Electrolytes of Oxygen

- Stabilised Electrolytes of Oxygen (SEO) is not classified as a drug and therefore, should not be prescribed as a cure for any health problems. However, increased oxygenation could have the following beneficial results:
- Super effective killer of microbes such as viruses, bacteria, protozoa, fungus and parasitic organisms, salmonella, cholera, E coli, streptococcus, pseudomonas and staphylococcus aureus
- Water Purification (will kill bacterium in approximately 30 seconds as well as remove chlorine and other contaminants) Add 5 drops per 250ml glass of water
- Detoxification and Cleansing (protect against bacteria and disease organisms)
- Promote increase in Energy Levels (athletes taking SEO report increased stamina and performance)
- Assists in the penetration of creams and/or oils into the skin (moisturisers, massage oil)
- Use with toothpaste to help control mouth infections (use diluted spray on your toothbrush)
- Increased oxygenation to the lungs that may assist smokers in their stop smoking programme.
- Treatment of Candida Albicans and Giardia and other single cell parasites (may take 3-4 months)
- Reported benefits and although not scientific include many such as reduced blood pressure, disappearing varicose veins, improved diabetic conditions, diarrhoea, improved digestion.
- May help alleviate conditions such as sinus, eczema, psoriasis, skin cancer, cold sores, asthma, colds, flu.
- Combat bacteria, microorganisms in storage and food preparation areas.

The world renowned medical microbiologist, Dr James D. Berg, Ph. D., while at Stanford University, supports the works of Dr. L.P. Hagar at the University of Illinois, “saying that oxygen stabilised in this unique way produces chlorite and chlorine dioxide, which are known to be anti-inflammatory agents. SEO involves the utilisation of chlorite by cells, particularly myeloperoxidase in the leukocytes, as a substrate to increase the efficiency of the enzymes group known as peroxidases and chloroperoxidase. These enzymes are important in the immune system, thus they may be directly enhanced by the increased rate of oxidation of foreign material by the leukocytes.
