Comparison of chiral phases with HPLC

Chiral columns, overview and prices

Chiral preparative separations by Hoffmann-La Roche

Free chiral screening

CHIRAL COLUMNS MADE BY DR. MAISCH

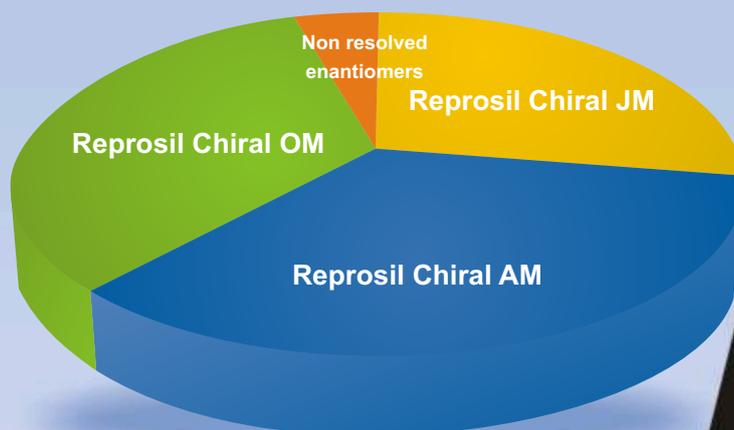

MORE THAN 90% OF SEPARATIONS

Reprosil chiral columns are complementary and successful in achieving more than 90% of separations of the solute set.

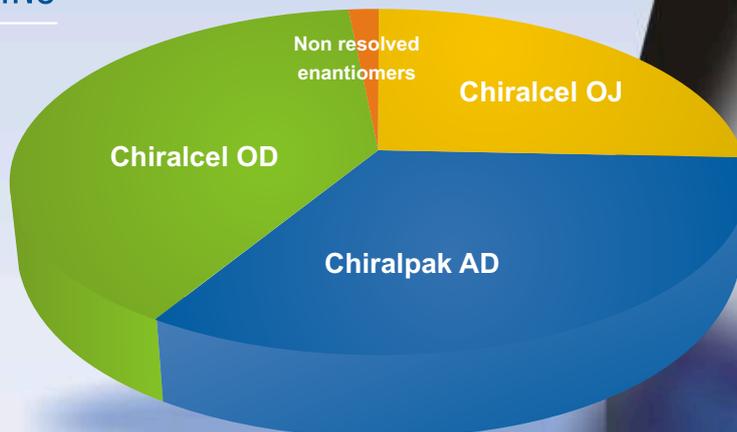

Reprosil Chiral JM and OM allow performing rather equivalent performances compared to their original homologous CSP's.

Only Reprosil Chiral AM shows a lower number of successful separations than Chiralpak AD (similarly to all other AD clones). Reprosil Chiral CM does not resolve the 8% of non-separated enantiomers but is rather redundant to the other three for this particular solute set.

EVALUATION OF REPOSIL CHIRAL OM vs. OD

Evaluation of a silica phase modified with cellulose tris-(3,5-dimethylphenylcarbamate) "Reposil Chiral-OM" in supercritical fluid chromatography.
Syame Khater and Caroline West, University of Orleans, CNRS UMR 7311, ICOA

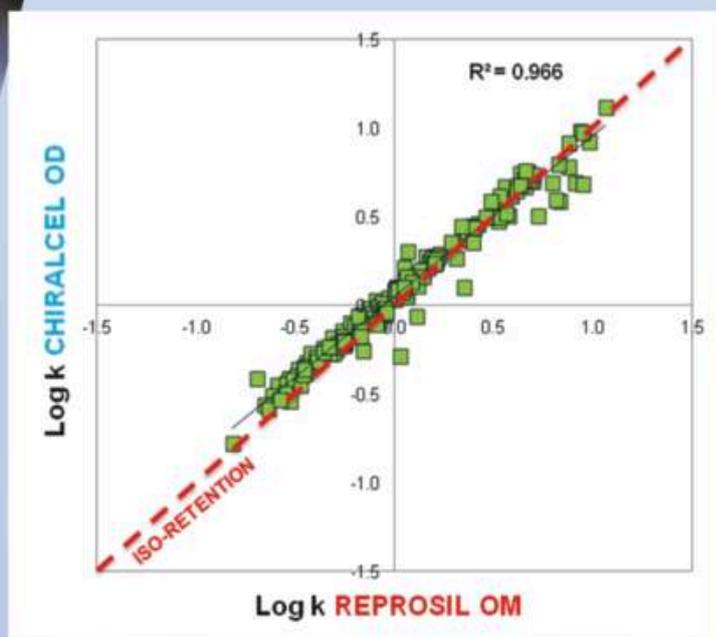

EXPERIMENTAL

All experiments were performed on a Jasco SFC system and an Acquity UPC² system. Reposil Chiral-OM is based on silica coated with tris-(3,5-dimethylphenylcarbamate) of cellulose. Two hundred and thirty achiral compounds and one hundred and thirty chiral racemic compounds were screened on different polysaccharide-type chiral stationary phases in SFC in the following operating conditions: CO₂/MeOH (90:10), flow rate 3 ml/min, oven temperature 25°C, outlet pressure 150 bars.

NON-SPECIFIC INTERACTIONS AND RETENTION

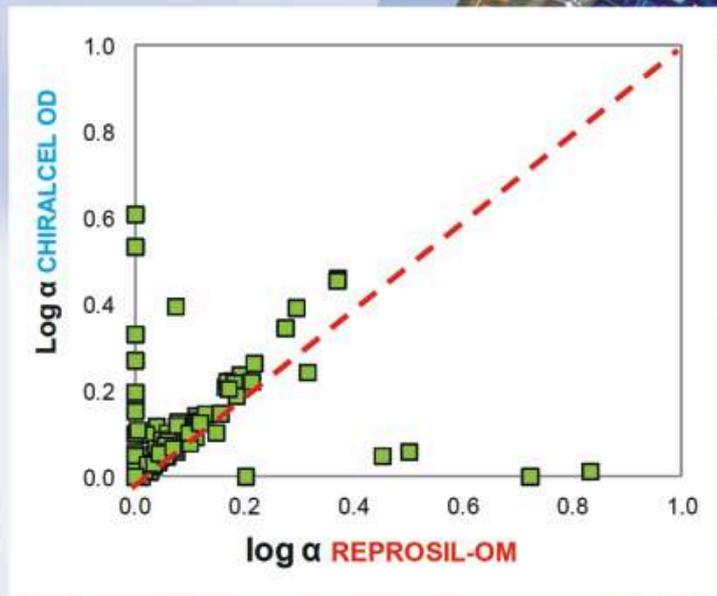

Retention on cellulose tris-(3,5-dimethylphenylcarbamate) could be explained by non-specific interactions such as π - π interactions, hydrogen bonding and stereo-induced interactions.

The investigation on non-specific interactions that control retention is based on the analysis of 230 achiral compounds.

The κ - κ plot on the left compares the logarithms of retention factors of 168 achiral species on Chiralcel OD vs. Reposil Chiral-OM. The phases are expected to be similar since they possess the same chiral selector ($R^2 = 0.966$). They would provide similar non-specific interactions.

> PERFORMANCE

The α - α plot below compares the logarithm of separation factors measured for 130 racemates on Reprisil Chiral-OM vs. Chiralcel OD.

The major part of the compounds is located on the dotted line, indicating similar separation behaviour of the two columns.

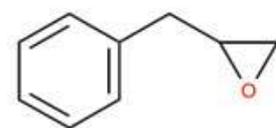

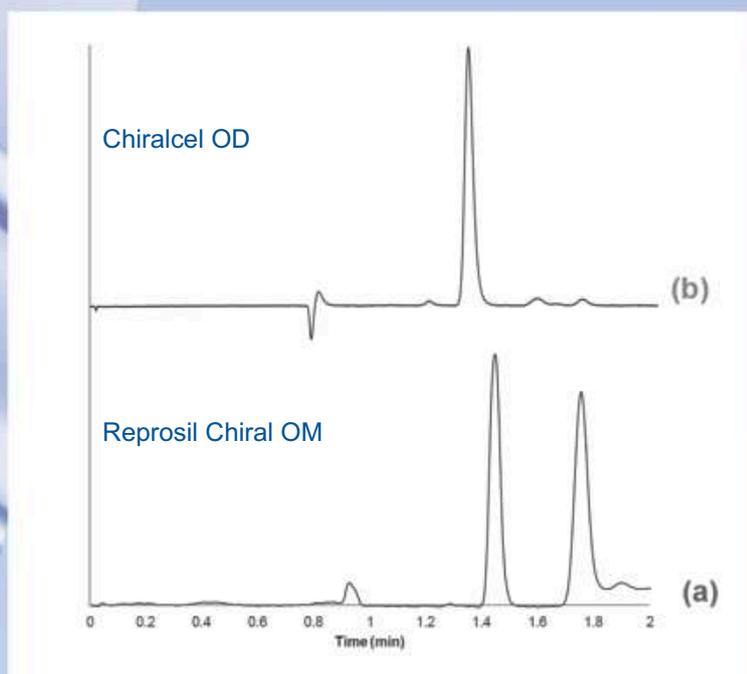

Chiralcel OD provides a higher number of unique hits. Indeed, 81% of the tested chiral species are resolved on Reprisil Chiral-OM against 86% on Chiralcel OD. However, some racemates are well separated on Reprisil chiral-OM with little or no separation on Chiralcel OD.

> APPLICATIONS

The following chromatograms illustrate the complementarity of the generic phases having cellulose tris-(3,5-dimethylphenyl-carbamate) as chiral selector in the course of method development

a) Focus on Reprisil Chiral-OM versus Chiralcel OD

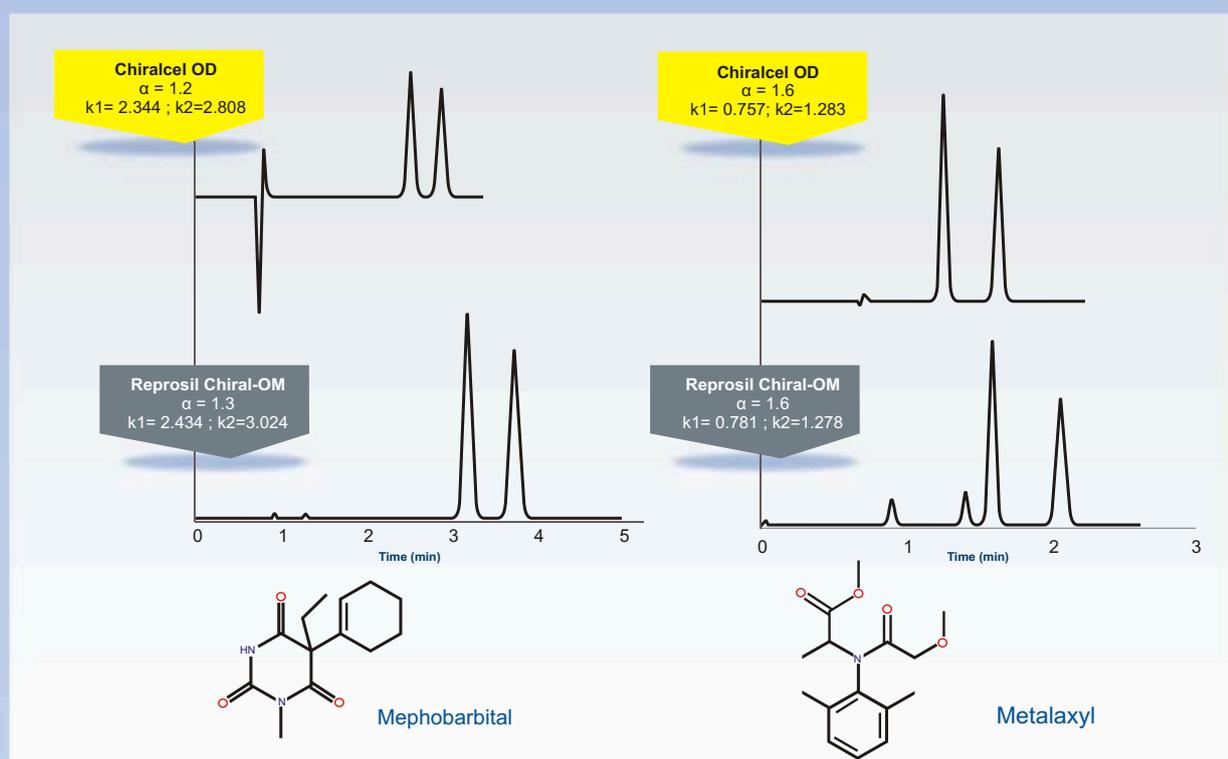

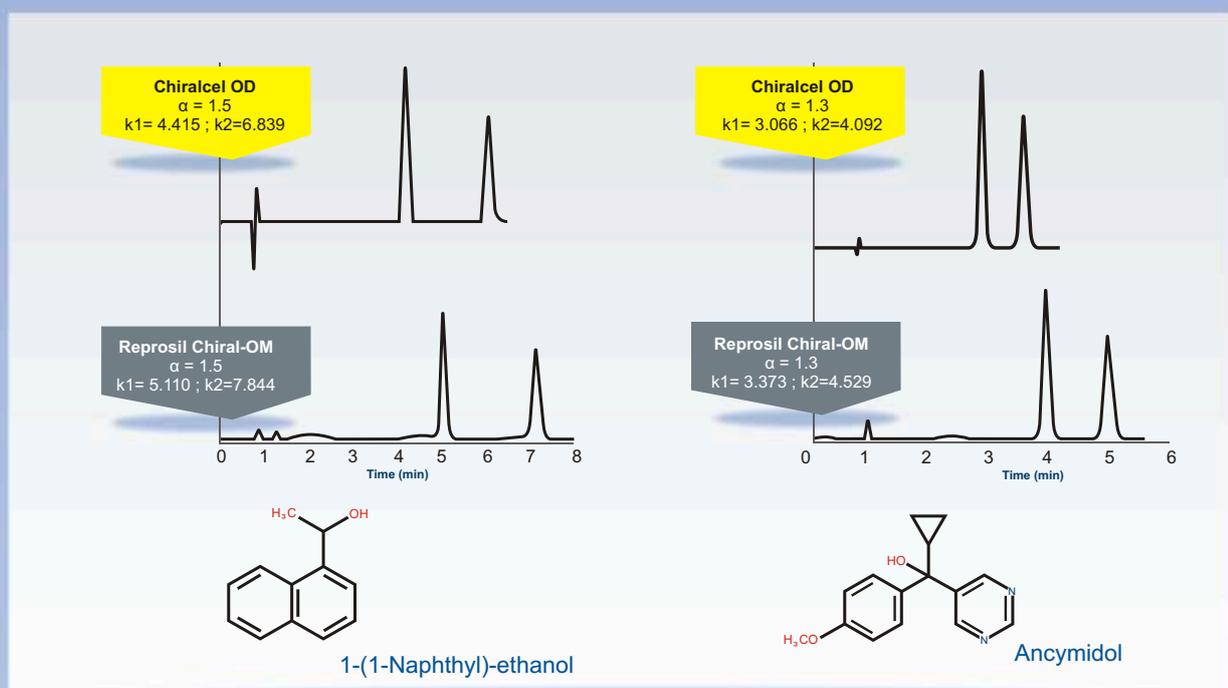

The chromatograms illustrate the chiral compounds that are well resolved on Reprisil Chiral-OM (a) but have no separation on Chiralcel OD.

(2,3-epoxypropyl)-benzene

IDENTICAL SELECTIVITY

COMPARISON OF REPROSIL CHIRAL OM AND CHIRACEL ODH

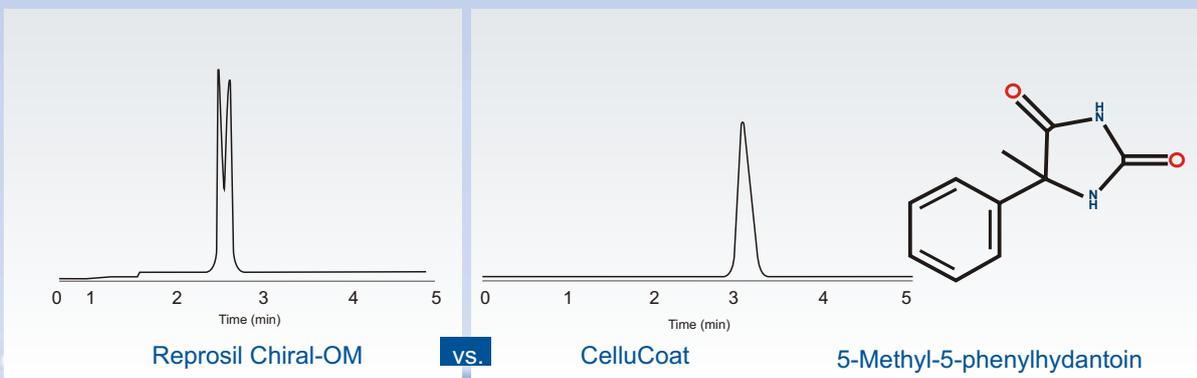

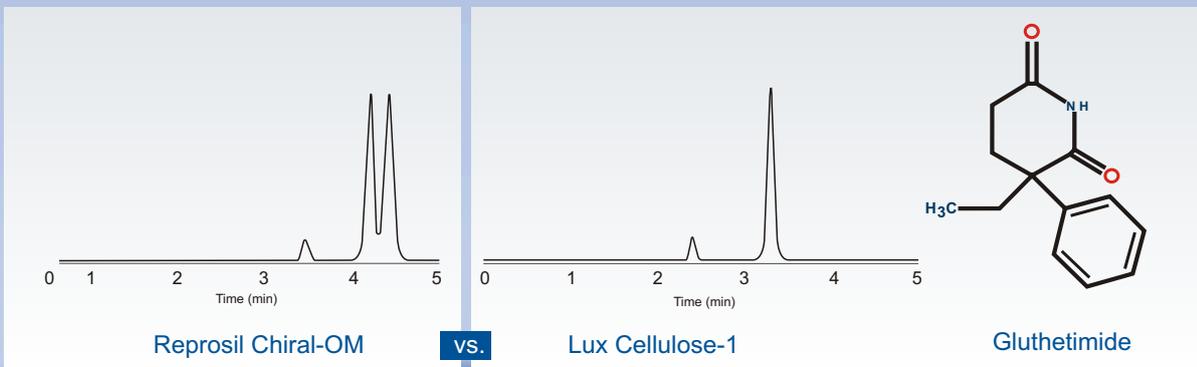

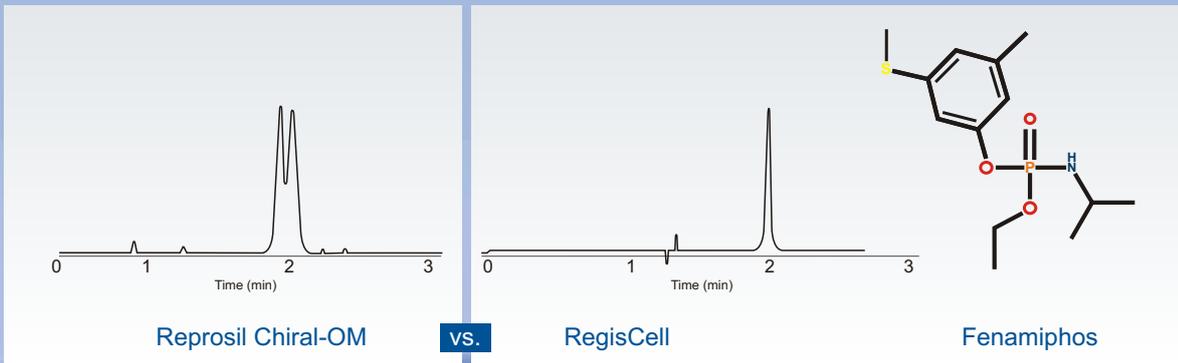

COMPARISON OF USP-L40 CHIRAL COLUMNS

The analysis of fenamiphos, gluthetimide and 5-methyl-5-phenylhydantoin on Reprisil Chiral-OM (left-hand chromatogram) provide a better starting point for a method development than those on RegisCell, Lux Cellulose-1 or Cellucoat, respectively (right-hand chromatogram).

> SEPARATION

> NO SEPARATION

(USP-L51) REPROSIL CHIRAL-AM (USP-L51)

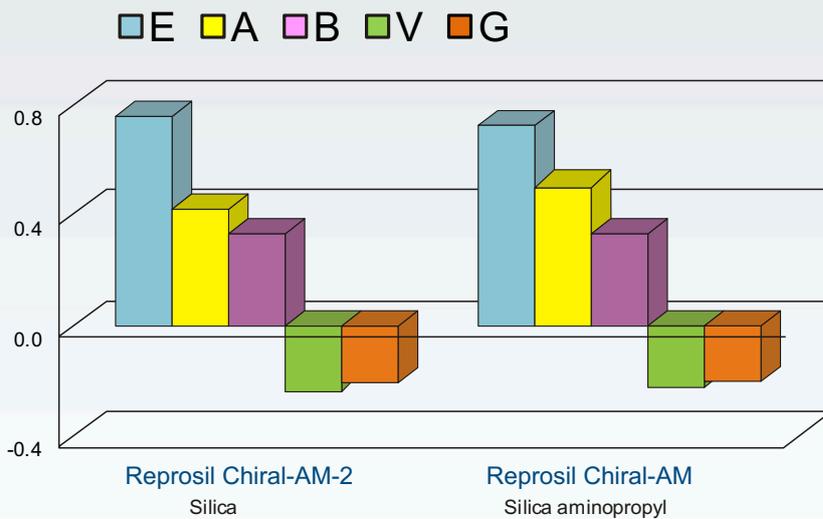

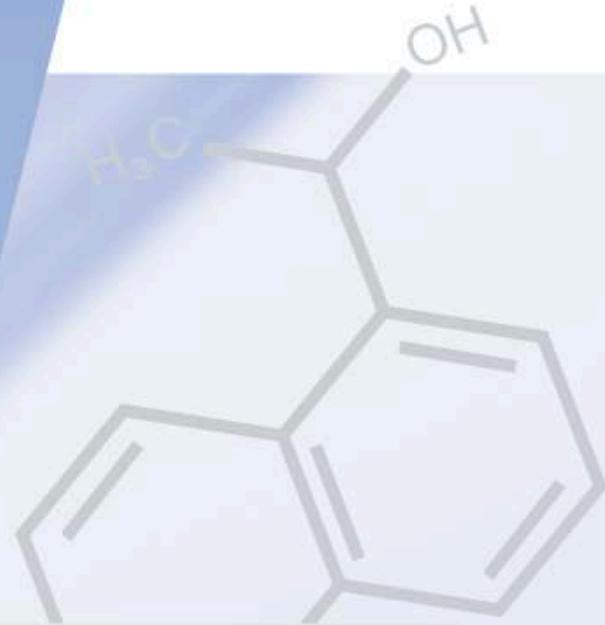

> QUESTION:

Does the nature of silica treatment affect the retention ability?

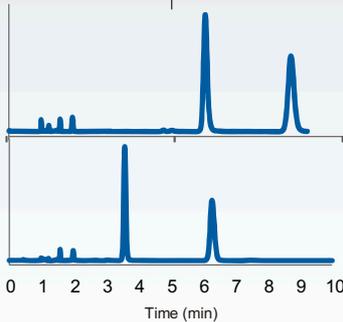

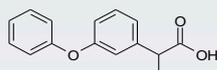

> ANSWER:

The interactions with hydrogen donor (a coefficient in yellow) are significantly lower on AM-2. Interactions with acids are thus lower.

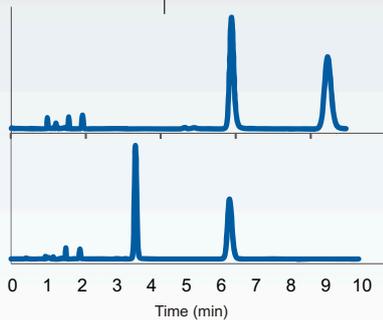

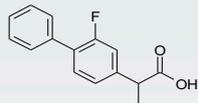

The analysis of 3 nonsteroidal anti-inflammatory drugs (Fenoprofen, Flurbiprofen and Ibuprofen) on AM (upper chromatograms) thus provides higher retention than that on AM-2 (bottom chromatograms)

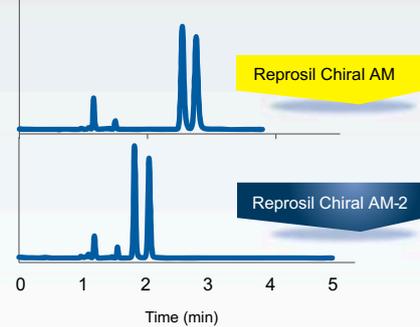

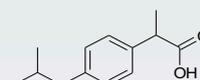

Fenoprofen

Flurbiprofen

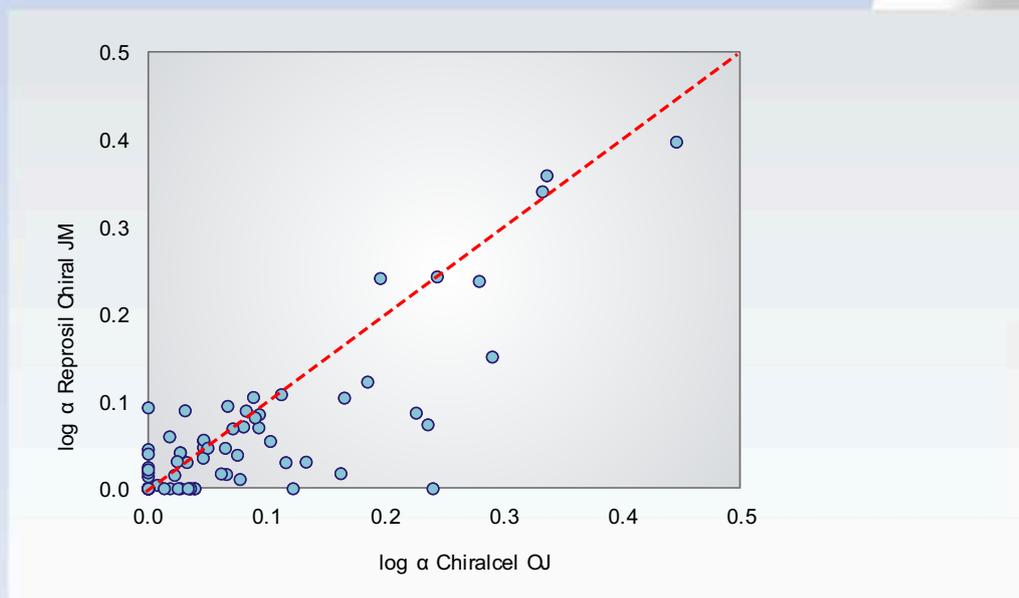

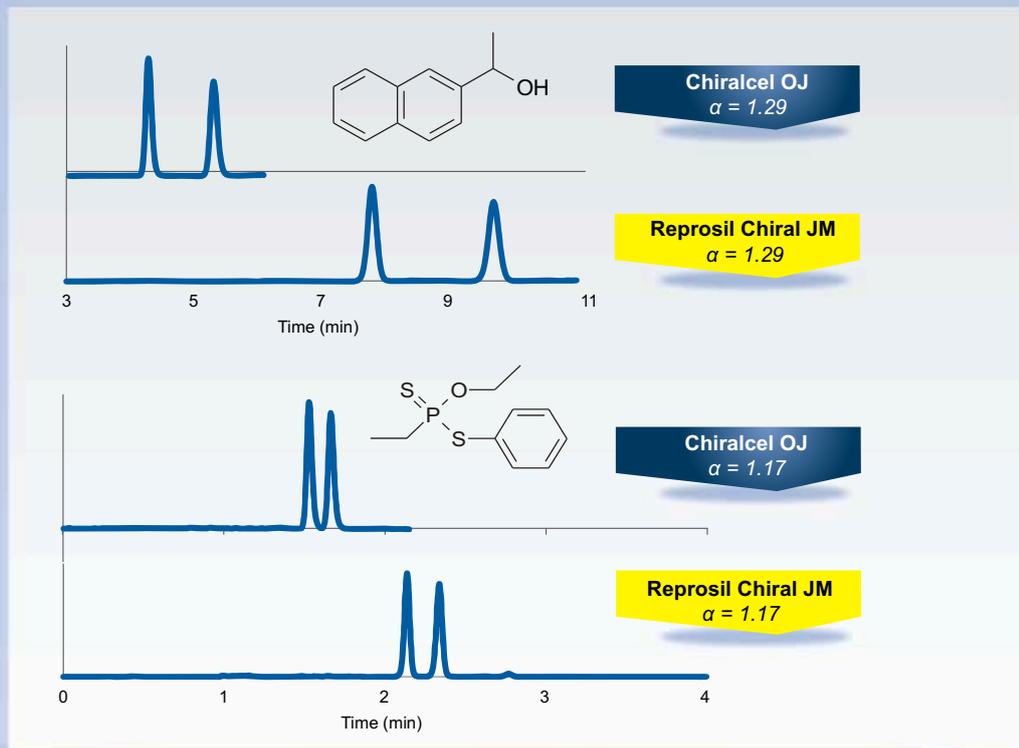

Ibuprofen

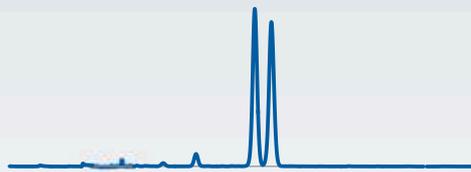

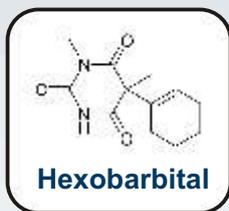

SEPARATION ABILITY OF JM AND OJ (USP-L80)

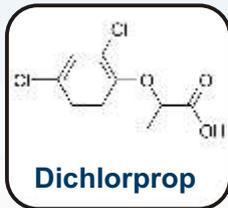

The log α - log α plot compares the separation ability of JM and OJ. The data points located on the first bisector (red dotted line) show similar separation profiles. The chromatograms of 1-(2-Naphthyl)-ethanol and Fonofos illustrate chiral compounds with identical separation factors on both columns.

The analysis of Hexobarbital on **Reprosil Chiral-JM** provides a better starting point for a method development than those on **Chiral-AM** or **Chiral-OM**.

COMPARISON OF REPOSIL CHIRAL-AM / OM / NR WITH HPLC

Reposil Chiral-AM and Reposil Chiral-OM

are new polysaccharide Chiral Stationary Phases. The chiral selectors are Amylose-tris-(3,5-dimethylphenyl-carbamate) for Chiral-AM or Cellulose-tris-(3,5-dimethylphenyl-carbamate) for Chiral-OM. Both selectors are coated with an ultra pure silica with 1000 Å pores.

Reposil Chiral-AM is equivalent to Chiralpak AD, and Reposil Chiral-OM is equivalent to Chiralcel OD from Daicel. Dr. Maisch's company offers them in 2 different CPS versions: Reposil Chiral-AM and Chiral-OM are designed for separations in normal phase mode, Reposil Chiral-AM-RP and Chiral-OM-RP for separations in reversed phase mode. Both Reposil Chiral-AM and Chiral-OM columns are able to separate neutral, acidic and basic racemates.

Reposil Chiral-NR

is an immobilized brush-type phase with very broad generality and complementary selectivity to Reposil Chiral-AM and OM. In many cases it is similar to Reposil Chiral-AM or Chiral-OM, but much more stable. The Chiral-NR selector is covalently bound, so that you can use all HPLC-eluent. This is similar to the immobilized IA, IB and IC columns. It is a perfect column for preparative separations.

Eluents:

In Normal Phase mode typical eluents are hexane / IPA or heptane / IPA mixtures.

Basic samples: To prevent peak tailing of basic compounds please add 0.1 – 0.5 % Diethylamine or Triethylamine.

Acidic samples: To prevent peak tailing of acidic compounds please add 0.1 – 0.5 % TFA or acetic acid.

In Reversed phase mode typical eluents are Acetonitrile / Water mixtures. You can use also MeOH or Ethanol instead of Acetonitrile. The water content must be below 85 %.

For basic compounds please use 0,5 – 1 N Perchlorate or 0.1 % TFA. For acidic compounds please use HClO₄ / NaClO₄ buffers together with ACN

Sample preparation / Temperature / Pressure / Guard:

Please dissolve the samples in the eluent. The samples should be filtered. For a longer life span a guard column is recommended. Best temperature range: 0-40 C°. Max. pressure is 150 bar.

Attention:

Please never use with coated (not immobilized) chiral phases the following eluents, which may destroy the columns: Ethers, THF, Dioxane, Dichlormethane, Chloroform, Ketones, Ethylacetate, DMSO, Dimethylformamide (DMF), Dimethylacetamide and 50-100 % IPA.

Comparison of 3 most important chiral columns by Dr. Maisch:

Rules of thumb for chiral separation

Reprosil Chiral-NR:

- Sample needs an oxygen at or near the chiral centre + an aromatic ring.
- More predictable.
- Inversion of elution order possible.
- Very high prep. capacity
- Stable in all HPLC-eluents.

Reprosil Chiral-OM:

- High versatile chiral phase.
- No aromatic ring necessary.
- No inversion of elution order possible
- Scale up possible
- Caution: Not stable in all eluents.

Reprosil Chiral-AM:

- Highest generality of all chiral phases.
- No aromatic ring necessary.
- No inversion of elution order possible
- Scale up possible
- Caution: Not stable in all eluents.

PRICES FOR CHIRAL COLUMNS

(Same prices for 4.6 mm, 4.0 mm, 3.0 mm and 2.0 mm id columns)

Reposil Chiral-NR

Immobilized brush-type phases, Dinitro-compounds.

π -electron acceptor / π -electron donor phase. Particularly for aromatic compounds with O or N near chiral-centre.

Reprosil L-Hydroxy-Prolin, 5 µm Alternative to Nucleosil Chiral-1, USP-L32
 Ligand exchange, Eluent: 2-10 mM Coppersulfate , 20-60 C°
 (For DL-Atrolactinacid, DL-Mandelic acids, DL-Lactic acid,
 DL-Asparagin, DL-Serin, DL-Phenylalanin, DL-Threonin,
 DL-Prolin, DL-Histidin, DL-Valin, DL-Tyrosin, DL-Tryptophan),
 (PN:r15.hp.s2504) 250 x 4mm 625,- Euro

Reprosil Chiral-AGP, 5 µm (300 A° Silicagel with chiral AGP-Protein, USP-L41)

100 x 4 mm (PN: r35.agp.s1004)	1190,- Euro,	100 x 3 mm (PN: r35.agp.s1003)	1090,- Euro
150 x 3 mm (PN: r35.agp.s1503)	1470,- Euro,	50 x 3 mm (PN: r35.agp.s0503)	840,- Euro
Guards: 5 x 3 mm: 2 pieces (PN:r35.agp.v0003)			100,- Euro
Guard-holder, direct (PN:81.00)			60,- Euro
150 x 2 mm (PN:r35.agp.s1502)	1620,- Euro,	100 x 2 mm (PN:r35.agp.s1002)	1210,- Euro
50 x 2 mm (PN:r35.agp.s0502)	930,- Euro		
Guards: 5 x 2 mm: 2 pieces (PN:r35.agp.v0002)			100,- Euro
Guard-holder, direct (PN:91.00)			80,- Euro

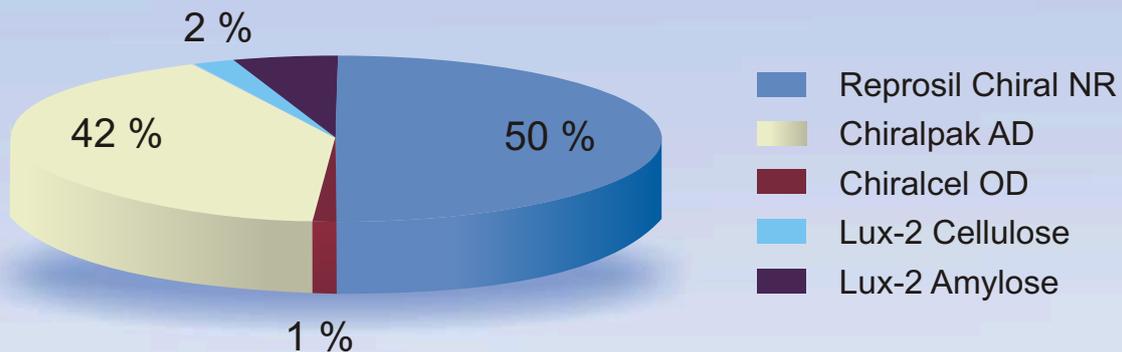

Chiral separation of Ibuprofen, Warfarin and Verapamil

Reprosil Chiral-AGP, 5 µm

Eluents:
Ibuprofen
 100 mM Na-phosphate buffer, pH7
Warfarin
 10% -Propanol in 10 mM Na-phosphate buffer, pH7
Verapamil
 12% ACN in 10 mM Na-phosphate buffer, pH7

CHIRAL PREPARATIVE SEPARATIONS WITH HPLC BY HOFFMANN-LA ROCHE, BASEL IN 2014.

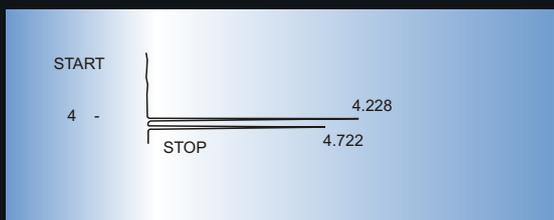

Comparison of chiral phases:

Column dimensions: 250 x 4.6 mm, Flow: 1 ml / min, Temperature: ambient, Eluent: n-Heptane / Isopropanol (85/15), Sample: Trans-Stilbene-Oxide

Reprosil Chiral-AMS, 5 µm

Alfa-value: 1.35

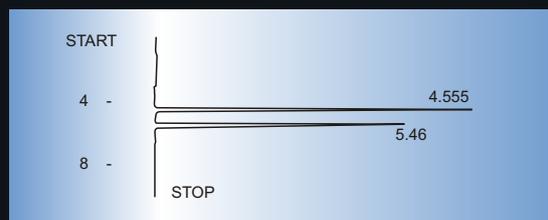

Typ. N/m: 70 – 80 000

Reprosil Chiral-ZA, 5 µm

Alfa-value: 1.5

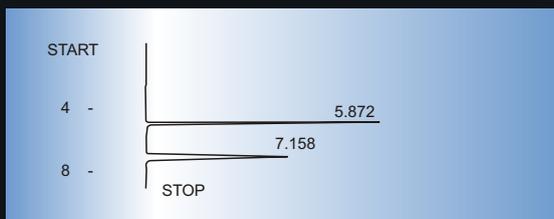

Typ. N/m: 70 - 80 000

Reprosil Chiral-OM, 5 µm

Alfa-value: 2.0

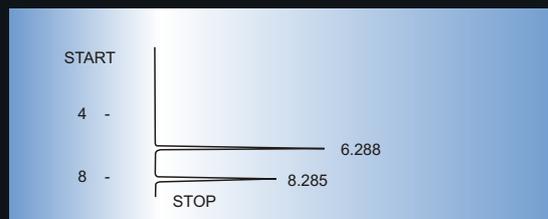

Typ. N/m: 60 -80 000

Reprosil Chiral-JM, 5 µm

Alfa-value: 1.6

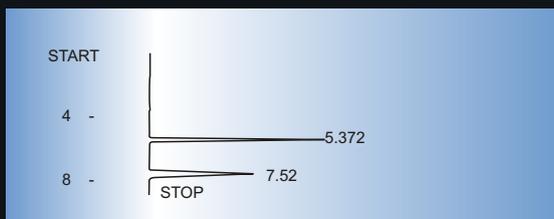

Typ. N/m: 70 -80 000

Reprosil Chiral-YM, 5 µm

Alfa-value: 1.8

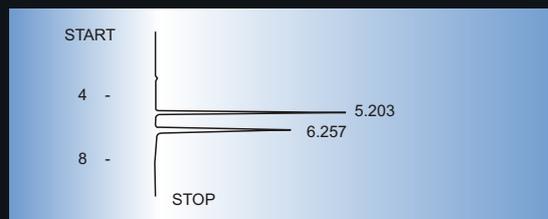

Typ. N/m: 40 - 55 000

Reprosil Chiral-CM, 5 µm

Alfa-value: 1.4

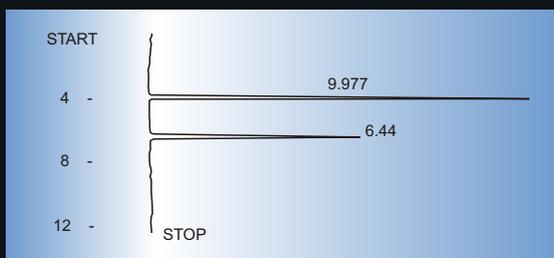

Typ. N/m: 40 – 55 000

Reprosil Chiral-ZM, 5 µm

Alfa-value: 3.0

Typ. N/m: 50 - 70 000

Reprosil Chiral-NR, 8 µm

Alfa-value: 3.3

Typ. N/m: 25 - 35 000
