

Brace

Top edge of brace is shaped to conform to inside of soundboard (so exact shape of brace may differ slightly from this drawing).

Arrow indicates grain direction through brace (do not use flat grain as this is a support brace and is prone to cracking).

Inside face of backboard, below plane of soundboard.

A cross brace is used on this model instead of the two lateral tone bars in the A5 mandolin.

Roger H. Siminoff designs, developments, and acoustics in music PO Box 2992, Atascadero, CA 93423 USA
