## Now using Recycled Polyester Blends

The production of polyester is very costly to the environment. Petroleum-based chemicals are used to make the fibers and the toxic by-products are polluting our planet's air & water. It's never been more important to be eco-conscious and we want to do our part in protecting what we love.

### The Solution is Recycled Polyester.

By breaking down water bottles and other single use plastics to create our fabrics, we are not only helping reduce the amount of harmful chemicals released into the environment, but we are also repurposing the non-biodegradable waste that would otherwise end up in our landfills and oceans.

Our products have all of the same great qualities of poly blends that you expect from your activewear and now you can feel good about it!
