

30W DALI-2 'Dim to Dark' LED Driver

SOLOdrive

SOLOdrive offers industry-best Natural Dimming to dark - LED dimming made beautiful! With any dimmer, in any application. Symbiosis on SOLOdrive stands for unity, for the SOLOdrive working seamlessly together with LED modules, controls and intelligent luminaire elements.

Product offering

SOLOdrive 360/A

Part number (P/N)	SL0360A6
Product description	SOLOdrive, 30W, DALI-2, Pulse dimming, 1 control channel, constant current, 1x 55V output, side feed, plastic long

Features & benefits

Natural dimming	Dim to dark, smooth brightness changes, excellent flicker performance, adaptable dimming curves, configurable minimum dimming level
LEDcode	LEDcode2 connects to integrated digital accessories, supports location-based loT applications and enables wired and wireless lighting control through LEDcode peripheral devices
Programmable	Fine-tune your driver for any application
Performance	Universal input voltage range, low inrush current and total harmonic distortion (THD), high power factor and efficiency
Camera compatibility	Hybrid HydraDrive technology is proven to work in TV studios and security camera environments
Pulse dimming	Different switching and dimming functions are initiated by pressing and holding the standard mains voltage switch for varying lengths of time

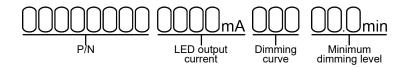

Programming tools

Programming interface	TOOLbox pro (TLU20504)
Programming cable set	TOOLbox pro to LED driver, programming cable, 5pcs (TLC03051)
Programming Hand-held, Touch-and-Go	PJ0035HH1
Programming jig	PJ0300A1
Programming software	FluxTool

Warranty

Order number configurator

P/N	LED driver part number
LED output current	Enter value in 1mA increments, e.g. "811" for 811mA
Dimming curve	"LOG" for logarithmic (default) "LIN" for linear
Minimum dimming level	Leave blank for default minimum dimming level of 0.1%. Specify in 0.1% increments, e.g. "10.5" for 10.5%.

Input characteristics		
Nominal input voltage range AC	120 - 250V (ENEC), 120 - 277V (UL)	
Absolute input voltage range AC	108 - 305V	
Nominal input voltage range DC	120 - 250V	
Maximum input current AC	0.35A @ 120V	
	0.3A @ 230V	
	0.15A @ 277V	
Input frequency range	50 - 60Hz	
Efficiency at full load	84%	
Power factor at full load	> 0.9	
THD at full load	< 15%	
Maximum inrush current AC	< 100mA²s @ 120V	
	< 100mA²s @ 230V	
	< 100mA ² s @ 277V	
Surge protection	2kV differential mode (DM) 2kV common mode (CM)	
Maximum standby power	< 0.5W	

Maximum LED output power	30W
Number of LED outputs	1
	(UL Class 2)
Programmable LED output current range	150 - 1400mA
LED output type	Programmable in 1mA increments within specified current range
LED output current tolerance	+/- 5% at programmed LED output current
LED output voltage range	2 - 55V
Operating window	30W max

Output voltage (V)

	1
Control protocol	LEDcode2
	DALI-2 Device type 6 & Pulse dimming
Dimming range	100% - 0.1%
Dimming curve options	Logarithmic (default) Linear
Dimming method	Hybrid HydraDrive
Time delay to standby	<25s
Dimming curves	100 90 80 70 Linear Logarithmic 40 30 20 10 0 0 20 40 60 80 Dimming level (%)

Pulse dimming control

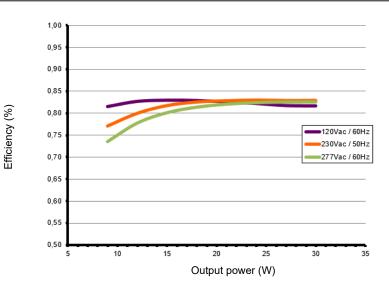

End-user functionality & Installation requirements	Detailed explanation in the eldoLED Quick Start Guide
LEDcode compatibility	In an installation using Pulse dimming, LEDcode functionality cannot be used with a Bluetooth radio, sensor, or other LEDcode devices
Supported input voltage range AC	100 – 250V

Performance

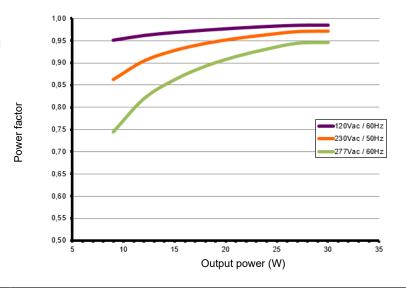

Typical efficiency vs load

Tested with a load of 6 LEDs in series, programmed for 1400mA and at 25 °C ambient temperature. The measurements below 30W were performed by dimming the light output.

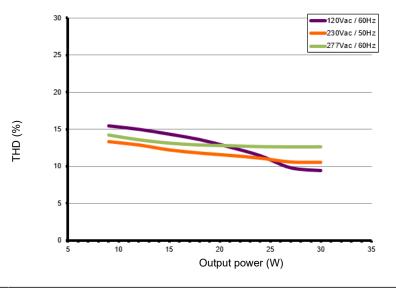

Typical power factor vs load

Tested with a load of 6 LEDs in series, programmed for 1400mA and at 25 °C ambient temperature. The measurements below 30W were performed by dimming the light output.

Typical THD vs load

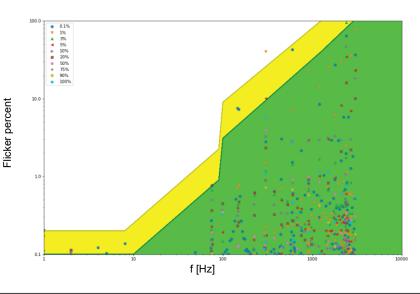

Tested with a load of 6 LEDs in series, programmed for 1400mA and at 25 °C ambient temperature. The measurements below 30W were performed by dimming the light output.

Typical flicker performance

Typical flicker percent as a function of frequency, measured across the dimming range. The results are overlaid with the low-risk (yellow) and no observable effect (green) levels as defined in IEEE P1789.

Environmental conditions

Operating ambient temperature (Ta) range -20 °C to +50 °C

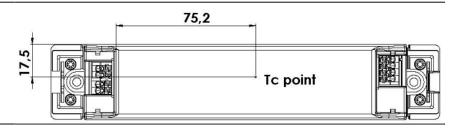

for output current ≤ 1050mA

-20 °C to +40 °C for output current >1050mA

Maximum operating case temperature (Tc max) 85 °C

Lifetime 50,000 hours at a maximum case temperature (Tc) of 85 °C

TC point location

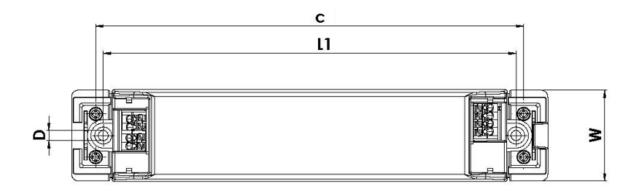

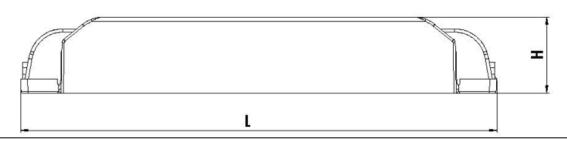

Thermal	The LED output current is decreased whenever the internal LED driver temperature exceeds factory preset temperature. The LED output current is increased again once the internal LED driver temperature drops below this
	internal temperature threshold. If the internal LED driver temperature continues to increase, despite a decrease in output current, the LED driver will shut down
LED output short circuit	The LED output current is cut off whenever the LED driver detects a short-circuit. The LED driver will attempt a restart every 400ms after a short-circuit is detected.
LED output overload	The LED driver decreases the LED output current sequentially, until it reaches its maximum rated power, whenever a load that exceeds the LED driver's maximum rated power is connected to the LED output.
Reverse polarity	The LED driver will not yield any current if the polarity of the load on the LED output is reversed. This situation will not damage the LED driver but may damage the LED load.
LED protection	
Thermal protection LED	An external NTC thermistor, which is placed on a PCB near the LEDs, can be connected to the driver via the LEDcode/NTC terminals. The output current to the LEDs is then decreased by 75% whenever the NTC exceeds a maximum allowable temperature, which is specified by the user in the FluxTool software. The default NTC temperature limit is set to 70 °C.
Thermistor value	47kΩ
Suitable thermistors	Leaded: Vishay, P/N 238164063473 Screw: Vishay, P/N NTCASCWE3473J

LED driver mechanical details

Length (L)	typical: 210 mm / 8.27 in
	maximum: 210.5 mm / 8.29 in
Width (W)	typical: 40 mm / 1.57 in
	maximum: 40.3 mm / 1.59 in
Height (H)	typical: 33.5 mm / 1.32 in
	maximum: 33.8 mm / 1.33 in
Mounting hole diameter (D)	typical: 4.4 mm / 0.17 in
	maximum: 4.5 mm / 0.18 in
Center to center mounting hole distance (L1)	typical: 182 mm / 7.17 in
	maximum: 182.5 mm / 7.19 in
Center to center strain relief cap hole distance (c)	typical: 188.7 mm / 7.43 in
	maximum: 189.2 mm / 7.45 in
3D files available on product web page	IGS
	STEP
Weight	204 g
Mounting torque	Not to exceed 0.5Nm

Packaging Length x Width x Height 580 x 240 x 200 mm / 22.83 x 9.44 x 7.87 in Weight (including products) 13 kg Products per box 50 pcs

Connector layout

Input wiring specifications

Connector type	push-in terminals
Connector supplier and series	Wago 250 series
Wire type	solid copper
Wire core cross section	0.5 - 1.5mm² / AWG 20 – 16
Wire core cross section for RCM	0.75 - 1.5mm² / AWG 20 – 16
Wire strip length	9.0mm / 11/32"

Connector type	push-in terminals

Certifications

RCM independent control gear classification

Regulation AS/NZS 60598.2.2	Applies when the control gear is built inside constructions		
Clearance type	Description	Distance	
Height clearance to building element (HCB)	Minimum distance between the top of the control gear and any building element above it	50 mm	
Minimum insulation clearance (MIC)	Minimum distance between the top of the control gear and the building insulation above it	50 mm	
Side clearance to building element (SCB)	Minimum distance between the side of the control gear and any building element	50 mm	
Side clearance to insulation (SCI)	Minimum distance between the side of the control gear and any building insulation	50 mm	
RISK OF FIRE	BUILDING INSULATION MUST NOT COVER THE CONTROL GEAR		

Safety	
	An independent control gear that can be used where normally flammable materials, including building insulation, are or may be present, but cannot be abutted against any material and cannot be covered in normal use.
4	FELV control terminals marked "Risk of electric shock" are not safe to touch. Dimming connected to FELV control terminal shall be insulated for Low Voltage supply of the control gear. Any terminals connected to the FELV circuit shall be protected against accidental contact.
4	Risk of electrical shock. May result in serious injury or death. Disconnect power before servicing or installing.
<u></u>	The LED driver may only be connected and installed by a qualified electrician. All applicable regulations, legislation, and building codes must be observed. Incorrect installation of the LED driver can cause irreparable damage to the LED driver and the connected LEDs.
	Pay attention when connecting the LEDs: polarity reversal results in no light output and often damages the LEDs.
<u> </u>	LED drivers are designed and intended to operate LED loads only. Powering non-LED loads may push the LED driver outside its specified design limits and is, therefore, not covered by any warranty.
(j)	eldoLED products are designed to meet the performance specifications as outlined at certain operating conditions in the data sheet. It is the responsibility of the fixture manufacturer to test and validate the design and operation of the system under expected and potential use cases, including faults.
(j)	Please observe voltage drop over long cable lengths. Longer cable lengths increase EMI susceptibility.
(j)	Product renderings and dimensional drawings are generic for the housing type. Product label, connector type and quantity may vary.
