

ETK | Gunshot Residue Test Kit

SwabTek has designed a test to be used in Gunshot Residue (GSR) analysis. The test is designed to maximize the ability to collect and analyze GSR swiftly, accurately, and with greater certainty than other tests on the market.

The test relies on the same principles as other SwabTek presumptive tests. The chemistry is based on dry-powdered reagents that are easier and safer than liquid reagents, and sample collection relies on a simple, pre-treated swab that can be used to safely and precisely collect samples from any surface.

Screen for GSR on Any Surface, Simply and Safely

- Firearm surfaces (grip, barrel, trigger, etc.)
- Bullet parts (spent shells and casings)
- Human body parts (hands, arms, face, etc.)
- Hard Surfaces (tables, chairs, floors, etc.)
- Material Surfaces (clothing, car seats, etc.)

GSR Test Kit Retail Package

Number of Tests	25
Price	\$800.00
Price/Test	\$8.00
SKU	ETK-GSR-25-00
