For hydroponic application only use Rocket Fuel as a foliar in vegetative stage.

Hot and dry environments cause plants to consume more water than nutrients. If your temperature is above 29°C use nutrients at half strength to avoid overfeeding and nutrient lockout.

(**) You can choose to use **Buds n' Blossoms** for a second week. we have found a second week is very bud friendly and if not, you can start with **H.D. Bloom** but do not use them together.
