*Specifications and Function Subject to Change without Notice*

## 1. INTRODUCTION

The V-BM/V-FS/V-TM/V-PS series are designed and programmed according to the OIML R-76 Class III requirements.

These indicators are sealed to prevent unauthorized access to internal parts. Ender users should be advised not to undertake any trouble shooting except those listed on the operation manual.

This maintenance manual contains of certain information that may result in fraudulent use. Do not release any part of this manual to any end users or un-authorized persons.

The internal mini jumper should be so set to prevent un-authorized settings or alternations.

Should a load cell has been replaced, make sure that the protection devices are properly set.

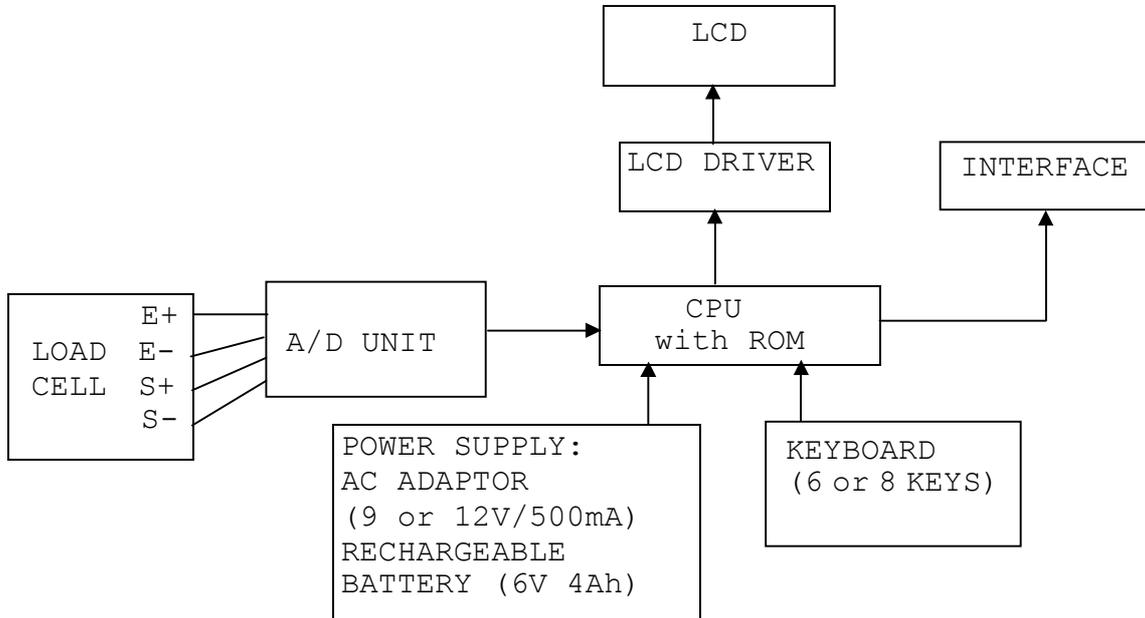

After servicing, it is necessary to go through all tests and procedures to ensure the indicator meets all the metrological and approval requirements.

Here are some features of the V-BM/V-FS/V-TM/V-PS series

1. Designed to meet OIML-R76 class III requirements.
2. Zero Indicator.
3. Tare Indicator.
4. Negative Value Indicator.
5. Auto Tare Function.
6. Power on Zero Function.
7. Manual Zero Function.
8. Animal Weighing Function.
9. Extended Display Function.
10. Auto Power Saving Function.
11. Metric/Avoirdupois Conversion Function.
12. Huge Size WTN LCD display, 5 ½ x 51mm.
13. Low battery warning signal.
14. 3 points Calibration.
15. Mini jumper to prevent end-user calibration.
16. Optional EL backlights.
17. Optional printer and RS232C interface.
18. Accumulation function available.
19. Built-in rechargeable battery operated.
20. Battery operating time: 200 hours plus after charged.

## 2. SPECIFICATION

### 2.1 SYSTEM BLOCK DIAGRAM

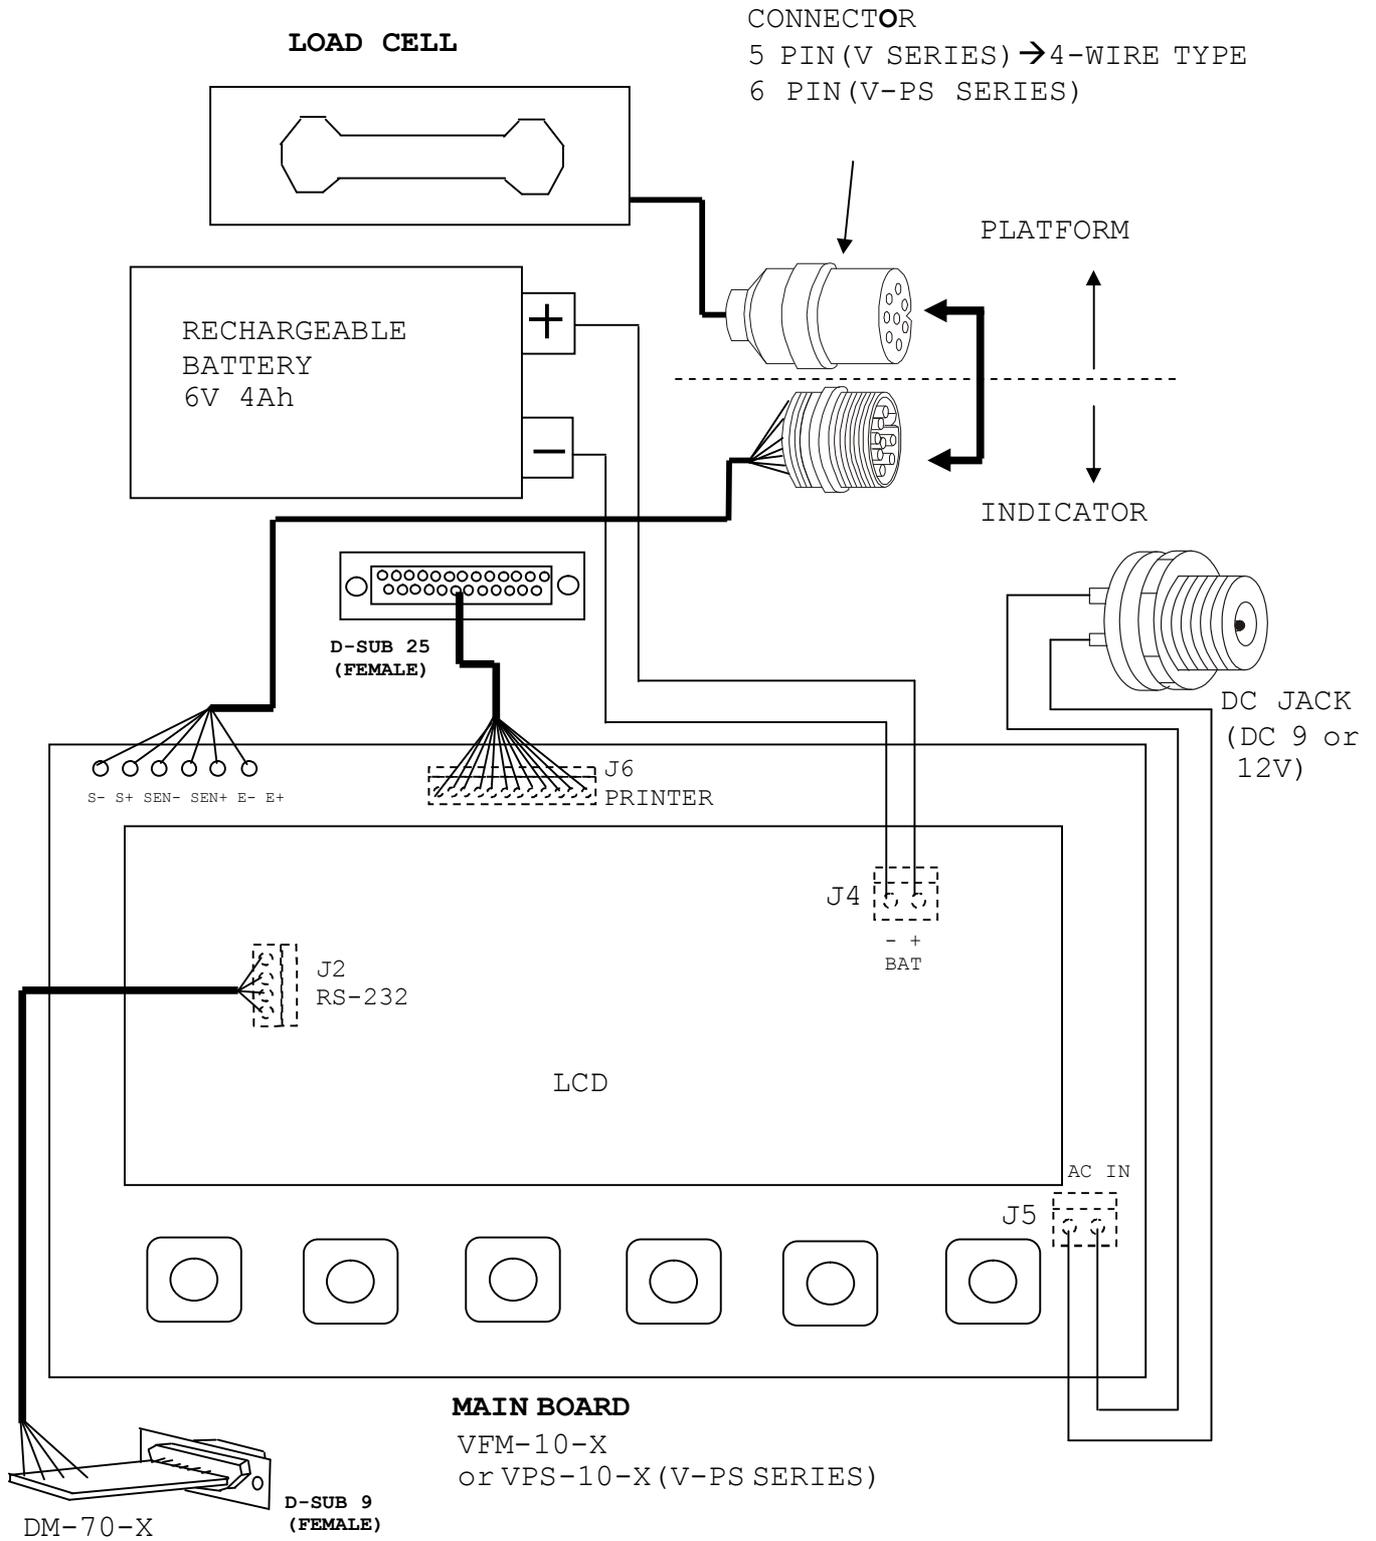

#### Description:

When a mass is placed on the platform, the load of the article is applied to the load cell inside it.

The resistance to the excitation current in the strain gauge will then change and the analog output signal varies.

It is amplified and digitized continuously by the A/D converter into a digital signal. Subsequently, the resulting count is processed and managed by the CPU. The CPU refers to the instructions from the keyboard, and then conveys the output data to LCD driver, which formats the data into readout on the display panels.

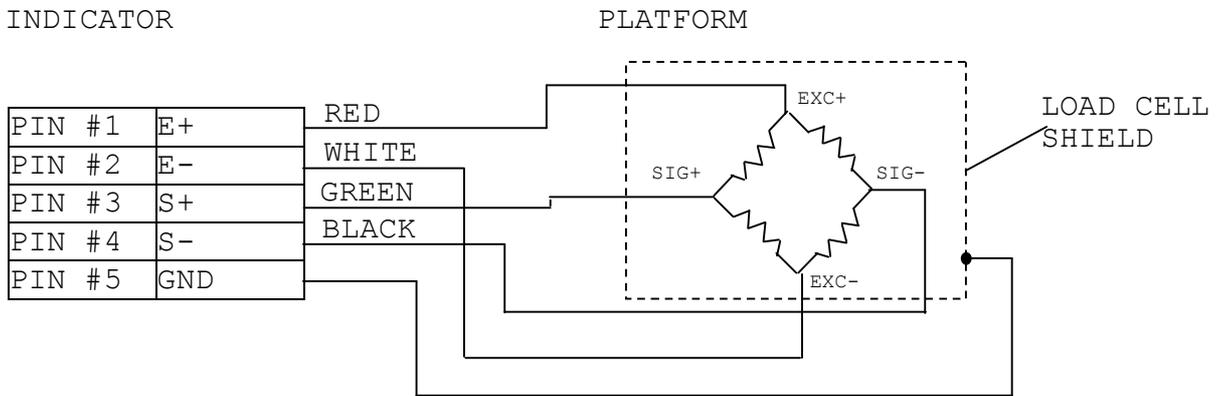

## 2.2 PHYSICAL LAYOUT OF ELECTRICAL CONNECTION

2.2.1 CONNECTION BETWEEN INDICATOR AND PLATFORM  
(8 or 5 PINS ROUND CONNECTOR)

PIN ASSIGNMENT for V-BM/V-FS/V-TM/V-PS

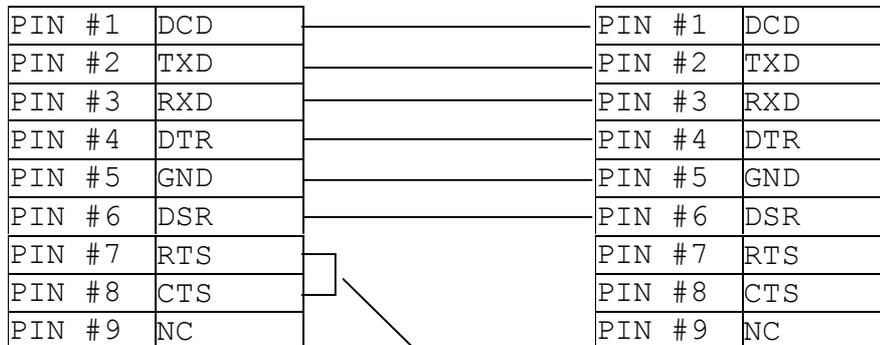

*Note: If use 4-wire load cell, PIN#1 & pin#2, PIN#3 & PIN#4 should be shorted.*

## 2.2.2 CONNECTION OF RS-232 BETWEEN INDICATOR AND PC (9PIN D-SUB)

### PIN ASSIGNMENT

INDICATOR (9PIN D-SUB, FEMALE)      PC (9PIN D-SUB, MALE)

\*\* RTS & CTS has been shorted internally.

BAUD RATE: 4800, 9600 (DEFAULT), 19200, 38400

Protocol: N81 (DEFAULT), E71

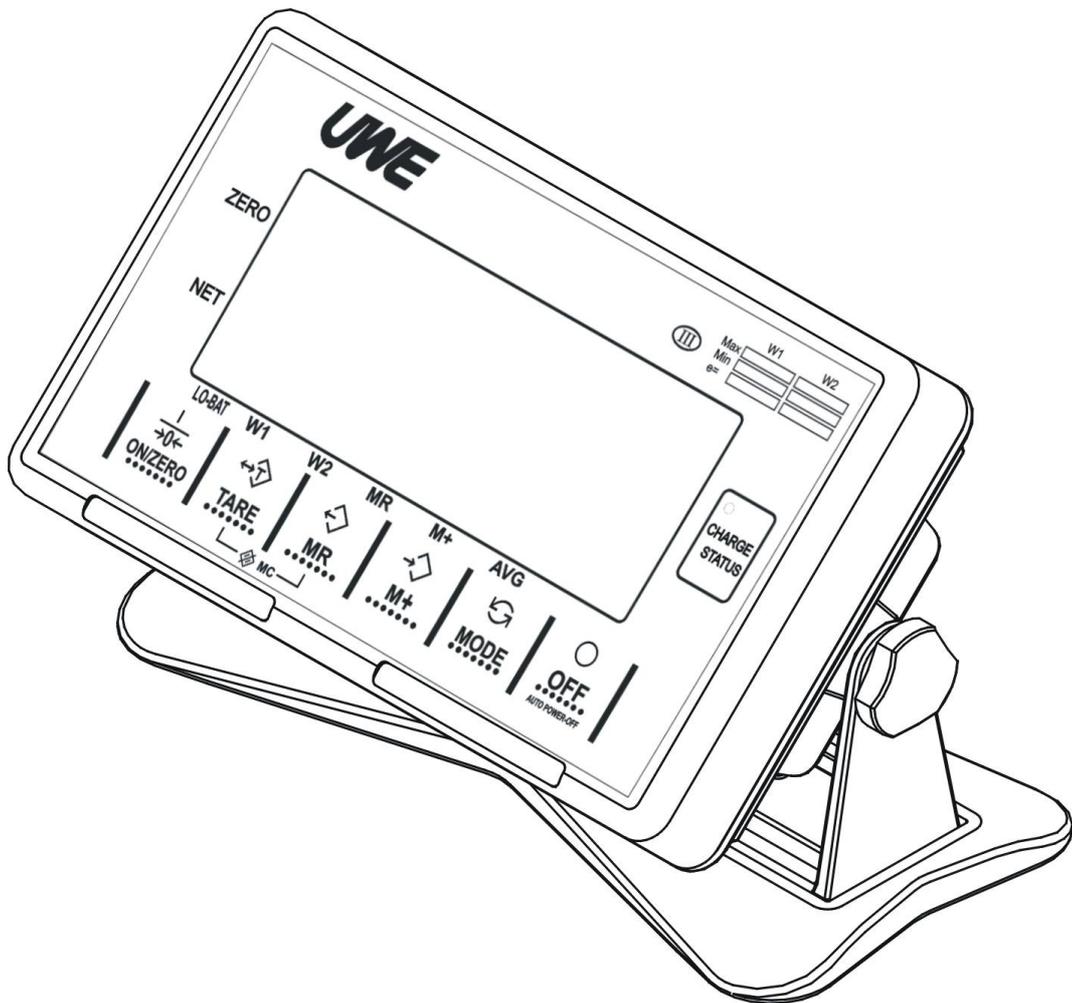

Code: ASCII

Data output: Continuous (DEFAULT), Auto Send (Output data once when stable, or Manual Send with M+ key (Press M+ to output a reading of individual transaction)).

## 2.3 GENERAL SPECIFICATION

### 2.3.1 Overall View

#### V-BM SERIES

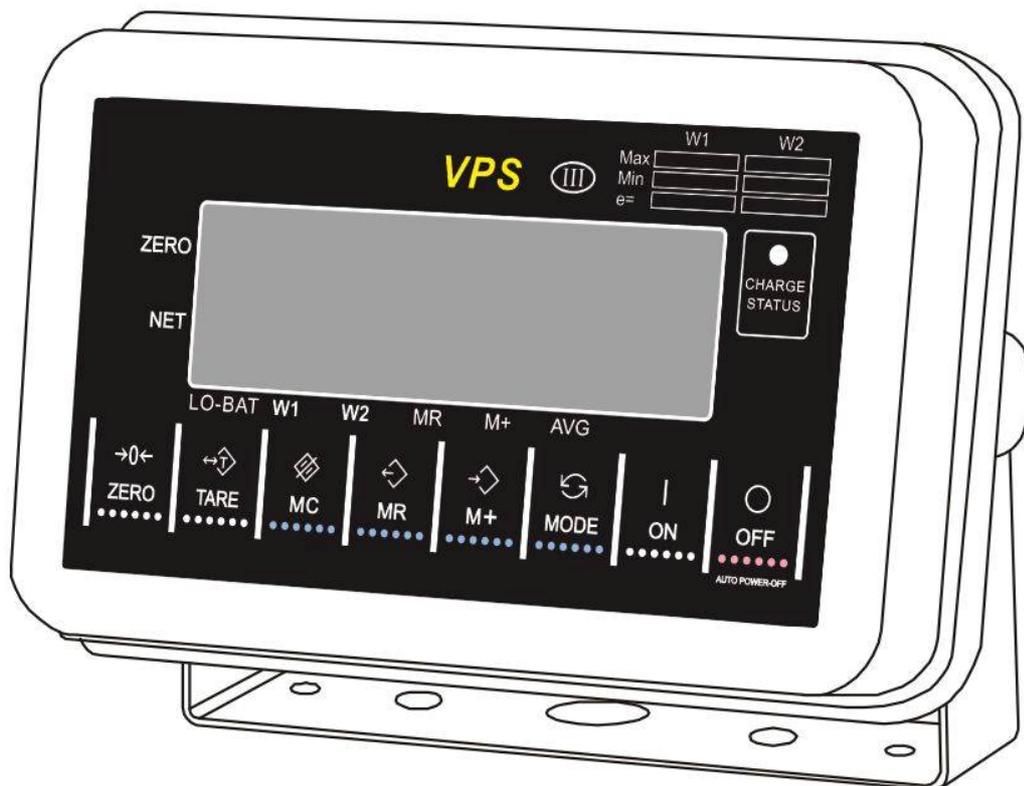

V-FS SERIES

V-TM SERIES

## V-PS SERIES

### 2.3.2 Indicator Dimension:

<b>V-BM</b>	250 (W)	x	150 (H)	x	150 (D) mm
<b>V-FS</b>	260 (W)	x	190 (H)	x	130 (D) mm
<b>V-TM</b>	300 (W)	x	130 (H)	x	180 (D) mm
<b>V-PS</b>	215 (W)	x	150 (H)	x	90 (D) mm

### 2.3.3 Model Specifications

Model No.	Capacity / Division		Scale interval (n)	
	Dual interval	Dual range	OIML	Non-OIML
	(Max <sub>1</sub> ) / (e <sub>1</sub> ) (Max <sub>2</sub> ) / (e <sub>2</sub> )	W1 (Max/e) W2 (Max/e)		
V-BM/V-FS/V-TM/V-PS INDICATOR	User Define		10,000	120,000
Class	III			
Software Number	CE030			
Maximum Tare Range	1/3 Max. - e (SUBTRACTIVE)			
Power on Zero Range	±2%, 5%, 10%, 15%, 20%, 30%, 40% Selectable			
Manual Zero Range	±2%			
Minimum Load	20e			
Operation Environment	-10°~40°C (14°~104°F), Non-condensed. R.H. ≤ 85%			
Power Consumption	0.1W 0.5W (when charged)			
Power Source	By Built-in Rechargeable Battery or Power Adaptor.			

### 2.3.4 Main Components Used

Microprocessors: SM89516

Crystal Oscillator: 18.432MHz

Display Device: WTN Liquid Crystal Display

### 2.3.5 Analog Specification

- Electronic, self-indicating device, with single [- or multi] - interval/range indication. The maximum number of verification scale intervals will be:  
 $n \leq 10,000$  for class (III) instruments or  
 $n \leq 1000$  for class (III) instruments.
- Power supply of 5 V DC;
- Minimum signal voltage per verification scale interval is 0.45  $\mu$ V;
- 24 bits serial digital output;
- Excitation power supply for the load cell is 5 V DC;
- A/D Conversion Speed: 10 times/second
- The analog data processing unit is built in a closed metal box.

### 2.3.6 Error Code and Description

P\_OFF : Low battery warning when power on  
Scale will shut off after this message appears

Error : Improper operation during calibration procedures  
Case1: The linearity of internal A/D count for 2<sup>nd</sup> calibration weight is not within 100% ± 2% of 1<sup>st</sup> calibration weight.  
Case2: The linearity of internal A/D count for 3<sup>rd</sup> calibration weight is not within 100% ± 2% of 2<sup>nd</sup> calibration weight.  
Case3: The span value is not within the acceptable range( $1e \geq 12$  internal counts, span value of full capacity < 1,000,000 internal counts).  
Case4: Calibration load should not be less than 1/100 of full capacity.

-----: Weighing exceeds -9e of zero point.

## 2.4 INTERNAL SETTINGS AND CALIBRATION METHODS

### 2.4.1 INTERNAL FUNCTION TABLE

Function	Symbol	Description
0	F0	Compulsory zero display(This function will not appear under OIML type)
1	F1	Span value reading
2	F2	Full display segment check
3	F3	Scale configuration
4	F4	Auto power off setting
5	F5	Select RS-232 baud rate & protocol
6	F6	Motion filter speed setting(0~7)
7	F7	RS-232 transmission mode
8	F8	Printer data format
9	F9	Auto tare setting
10	F10	Enable/disable absolute zero-point utilization
11	F11	Enable/disable accumulation when pressing M+
13	F13	Copies of UTP label printing (only available when choosing UTP in F.8)
14	F14	Enable/disable total printing when pressing MC (only available when choosing UTP in F8)
15	F15	UTP date/time setting (only available when choosing UTP in F.8)
19	F19	EC verification(For qualified personnel only)
20	F20	Gravity Compensation-place of calibration
21	F21	Gravity Compensation-place to be used

#### HOW TO ENTER THE REQUIRED FUNCTION MODE

- a. Turn scale off.
- b. Press and hold TARE, then turn scale on. Scale display F0
- c. Press TARE until the required function number appears.
- d. Press MODE
- e. Press MODE until the required setting appears.
- f. Press TARE to confirm.
- g. Repeat step c to f for other function setting, or
- h. Press ON/ZERO to save settings and return to normal operation.

### **F.0 COMPULSORY ZERO DISPLAY**

A zero weight value will be displayed on the LCD if the load detected is within the below range.

<b>Symbol</b>	<b>Zero Value Display Range</b>
2Ero 0	Disable (Normal display)
2Ero 1	$\pm 1e_1$
2Ero 2	$\pm 1.5e_1$
2Ero 3	$\pm 2e_1$
2Ero 4	$\pm 2.5e_1$

### **F.1 SPAN VALUE READING**

- a. Simply enter F1 to read the A/D counts.
- b. Press ZERO to clear the A/D counts, apply test mass onto platter, the span value of test mass will be displayed.

### **F.2 FULL DISPLAY SEGMENT CHECK**

When function is entered, all segments will be displayed. Check and make sure that no segments are missed.

### **F.3 SCALE CONFIGURATION**

The V-BM/V-FS/V-TM/V-PS indicators are designed to have no preset capacity and division, but for user to define. Depends on the requirement and the purpose of the indicators are operating under, the resolution can be set anywhere from 1/100 to 1/120,000.

When **oiml** mode is selected and application is legal for trade, the overall resolution will be limited to 1/10,000 with extended display for reference. When **norm** mode is selected and application is not legal for trade, the overall resolution can be set to a maximum of 1/120,000. The indicator also can be set to have dual intervals or dual range when parameter is input.

### **TO SET TYPE (Select between OIML and non-OIML application)**

- a. Indicator is off
- b. Press and hold **TARE**, then press **ON/ZERO**
- c. Indicator displays **F1**
- d. Press **TARE** until indicator displays **F3**
- e. Press **MODE** to enter
- f. Indicator displays **TYPE**

- g. Press **M+** to select the operating type between **oiml** or **norm** for non-OIML
- h. Press **MODE** to confirm

**TO SET WEIGHING UNIT**

- a. After **TYPE** is selected, indicator will display **unit**
- b. Press **M+** to select the weighing units of kg, g, lb/kg, lb/g
  - To enable the avoirdupois units, press **MODE** when the lb/kg or lb/g sign appears.
  - To disable the avoirdupois units, press **MODE** when the kg or g sign appears.

**TO SET DECIMAL POINT (For capacity and division readings)**

- a. After **UNIT** is selected, indicator will display **dp**
- b. Press **M+** to select number of decimal place. It can be set from no decimal place up to 3 decimal place
- c. When selected, press **MODE** to confirm

**TO SET RATED CAPACITY AND DIVISION**

(For Single interval, it means  $\text{Max} \times e$ ; for Dual Interval, it means  $\text{Max}_2 \times e_2$ )

- a. After decimal place is selected, indicator will display **CAP2**
- b. Press **M+** to enter and utilize **M+** to increase value, **MR** to move cursor to the next digit (**ON/ZERO** to move cursor backwards when the key is available)
- c. The division must be selected to complete the setup before proceed to the next selection
- d. Press **MODE** to confirm

**TO SET POWER ON ZERO RANGE**

- a. After capacity and division is set, indicator will display **CAP1?**  
If dual interval/dual range does not require, press **MODE** to enter power on zero range setting.
- b. Indicator display **0Init**(Power on Zero Range), press **M+** until required setting appears.  
In.=02%(±2% of full capacity) → In.=05% → In.=10% → In.=15% → In.=20% → In.=30% → In.=40% → In.=02%.....
- c. After power on zero range is selected, press **MODE** to confirm.
- d. During indicator displayed **CAP1?**, press **M+** to enter dual interval

/dual range setting if those functions are required.

**TO SET DUAL INTERVAL (Max<sub>1</sub> x e<sub>1</sub>) OR DUAL RANGE (W1 / W2)**

- a. Press **M+** to select **Dual Interval** or **Dual Range**
- b. To enable dual interval, press **MODE** when the "Inter" sign appears.
- c. To enable dual range, press **MODE** when the "rAnge" sign appears.
- d. Utilize **M+** and **MR** keys to set the decimal point, capacity and division.
- e. After capacity and division is set, indicator will display **0Init.**
- f. Press **M+** to select power on zero range.  
(In.=02%, 05%, 10%, 15%, 20%, 30%, 40%)
- g. Press **MODE** to confirm.
- h. When indicator display **F4**, press **MODE** to continue setup or **ON/ZERO** to quit

**NOTE 1:** You must reset capacity every time when you change the mode between OIML or NORMAL.

**NOTE 2:** Each range must not exceed 1/10,000 and 1/20,000 for overall capacity under OIML mode and 1/120,000 for NORMAL mode. For example, if **CAP2** sets as 2000kg (max2) x 0.2kg (e2), then **CAP1?** can set as 1000kg (max1) x 0.1kg (e1). So for OIML, max1/e1 & max2/e2 will not exceed 1/10,000 and max2/e1 will not exceed 1/20,000. For NORMAL, max2/e1 must not exceed 1/120,000.

**NOTE 3:** When setting up capacity, user must program all digits including division before press **MODE** to confirm.

**F.4 AUTO POWER OFF SETTING**

Two modes are available: (Default=4\_OFF)

0\_OFF = Auto Power Off function is disabled.

4\_OFF = Scale will automatically be turned off after 4 minutes unused.

**F.5 RS-232 BAUD RATE & PROTOCOL**

- a. Press **M+** to select baud rate of **4800, 9600, 19200** and **38400**
- b. Press **MODE** to enter transmission protocol selection and press **M+** to select **P=n81** or **P=E71**
- c. Press **TARE** to save and return to other function

**Note:** The default value is:

Baud Rate :9600

DATA BIT :8  
 PARITY BIT :N(NONE)  
 STOP BIT :1  
 CODE :ASCII

#### **F.6 MOTION FILTER SPEED SETTING**

Motion filter is used to give a more stable display when the working environment is affected by motion or airflow interference. Refer to the below table for motion filter speed setting

FiLt.X	Motion Filter Strength	Response Speed	Environment Interference Stability
0	NO	QUICK	BAD
1	WEAK		
2			
3	↑	↑	↑
4			
5	↓	↓	↓
6			
7	STRONG	SLOW	EXCELLENT

- a. Press **MODE** to select **FiLt.0** to **FiLt.7**
  - To disable the **MOTION FILTER FUNCTION** select "**FiLt.0**"
  - To employ the **MOTION FILTER FUNCTION** select "**FiLt.1**"~"**FiLt.7**"
- b. Press **TARE** to save and return to other function

#### **F.7 RS-232 TRANSMISSION MODE**

- a. Press **MODE** to select RS-232 transmission mode of **Conti**, **Auto**, **P\_Out** or **OFF**.
  - When selects **Conti**, indicator will transmit data continuously when reading is stable
  - When selects **Auto**, indicator will transmit data once when reading is stable
  - When selects **P\_out**, indicator will transmit data once when pressing **M+**
  - When selects **OFF**, indicator will not transmit data anymore.
- b. Press **TARE** to save and return to other function

#### **F.8 PRINTER DATA FORMAT**

- a. Press **MODE** to select printer data format of **Prnt.1**, **Prnt.2** or **utP**
  - When **Prnt.1** is selected, indicator will print single data

- when pressing **M+**
- When **Prnt.2** is selected, indicator will print data in a table format with number of entries and total weight
  - When **utP** is selected, indicator will print data to UTP printer by it's communication protocol.
- b. Press **TARE** to enter next setup for printout mode.
  - c. Press **MODE** to select printout mode of **Auto** or **nAuto** (non-auto)
    - When selects **Auto**, indicator will print data once when reading is stable
    - When selects **nAuto**, indicator will print data once when pressing **M+**
  - d. If choose **utP** in **step a**, there will have several printer data formats can be set.  
 After pressing **TARE**, indicator displays previous setting (Prnt.1, Prnt.2 or Form0~Form9)  
 Press **MODE** until the required setting appears.
    - When **Prnt.1** is selected, indicator will print data in a table format with number of entries and total weight
    - When **Prnt.2** is selected, indicator will print single data with simple format.
    - When **Form0~Form9** is selected, indicator will employ desired label format that has stored in UTP printer by it's communication protocol.
 Then press **MODE** to select **Auto** or **nAuto** as step c described.
  - e. Press **TARE** to save and return to other functions

#### **F.9 AUTO TARE FUNCTION SETTING**

- a. Press **MODE** to select **TroFF** or **Tr\_on**
  - TroFF** will disable the auto tare off function
  - Tr\_on** will enable the auto tare function and tare off the first weight that is placed on the scale
- b. Press **TARE** to save and return to other functions

#### **F.10 ENABLE/DISABLE ABSOLUTE ZERO-POINT UTILIZATION**

- a. Press **MODE** to select **AC\_on** or **AC\_oF**
  - AC\_on** will enable absolute zero-point utilization (use original calibrated zero-point as power on zero-point)
  - AC\_oF** will disable absolute zero-point utilization (indicator will be zeroed automatically while power on)
- b. Press **TARE** to save and return to other functions

**F.11 ENABLE/DISABLE ACCUMULATION WHEN PRESSING M+**

- a. Press **MODE** to select **Ad\_on** or **Ad\_oF**
  - Ad\_on** will enable accumulation function when pressing **M+**  
(Also prints data via RS-232 and printer)
  - Ad\_oF** will disable accumulation function when pressing **M+**  
(Press **M+** to print data only, **M+** & **MR** & **MC** will be no function)
- b. Press **TARE** to save and return to other functions

**F.13 COPIES OF UTP LABEL PRINTING**(only available when choosing UTP in **F8**)

- a. Press **MODE** to select copies of UTP printing(Copy1~copy9)  
Copy X: quantity of copies
- b. Press **TARE** to save and return to other function.

**F.14 ENABLE/DISABLE TOTAL PRINTING WHEN PRESSING MC**(only available when choosing UTP in **F8**)

- a. Press **MODE** to select **tt\_on** or **tt\_oF**
  - tt\_on** will enable total printing when pressing **MC**  
*(F11 must set "Ad\_on" in advance)*
  - tt\_oF** will disable total printing when pressing **MC**
- b. Press **TARE** to save and return to other functions

**F.15 UTP DATE/TIME SETTING**(only available when choosing UTP in **F8**)

It must be a UTP printer installed and connected to scale Properly when trying to set up UTP's date/time data.

- a. Enter **F15**, press **MODE** to show present year data(year:y=xx, e.g. Year of 2008 → y=08).
- b. Enter correct year data by utilizing **MR**(move cursor) and **M+**(increase value) keys.
- c. Press **MODE** to save setting, then scale displays present month data(month:m=xx).
- d. Repeat **step b to c** for month(m=xx)/day(d=xx)/hour(H=xx)/minute(m=xx) data setting.

**F.19 EC verification(For qualified personnel only)**

This function can only be used under verification stage. When executing F19, the displayed scale interval(**d**) will be 1/10 Of verification scale interval(**e**). (eg. e=0.1g, d=0.01g)

**F.20 GRAVITY COMPENSATION-PLACE OF CALIBRATION (C.G.)**

This function stores the gravity value of where the scale is manufactured. indicator was calibrated according to the value stored.

- a. Press **MODE** to enter and utilize **M+** to increase value, **MR** to move

cursor to the next digit

- b. Press and hold **MODE** to save or **TARE** to quit

**Note:** *When the change is saved, indicator will enter calibration automatically to reflect the change in gravity. Please refer to next paragraph for how to calibrate the indicator*

**F.21 GRAVITY COMPENSATION-PLACE TO BE USED ( U.G.)**

This function stores the gravity value of where the indicator will be used. The value stored in F.21 will be used to compare with the value in F.20 to compensate the difference in gravity value.

- a. Press **MODE** to enter and utilize **M+** to increase value, **MR** to move cursor to the next digit
- b. Press and hold **MODE** to save and return to other functions

## 2.4.2 CALIBRATION METHODS

### AUTO CALIBRATION

- a. Indicator is off and nothing is on the platform
- b. Press and hold **MODE**, then press **ON/ZERO**
- c. Indicator displays **CAL.\_1**
- d. Press **MODE** for **YES** and indicator will self calibrate zero point before proceed to the first point calibration
- e. Indicator will show "Load XXXX", for which XXXX is 1/3 of the full capacity. Load the weight according to the display
- f. After weight is placed, press **MODE** when display is flashing
- g. Indicator displays **CAL.\_2**
- h. Press **MODE** for **YES** or **ZERO** to exit
- i. Indicator will show "Load YYYY", for which YYYY is 2/3 of the full capacity. Load the mass according to the display
- j. After weight is placed, press **MODE** when display is flashing
- k. Indicator displays **CAL.\_3**
- l. Indicator will show "Load ZZZZ", for which ZZZZ is the full capacity. Load the mass according to the display
- m. After weight is placed, press **MODE** when display is flashing to complete the calibration procedures

### ODD WEIGHT CALIBRATION

- a. Indicator is off and nothing is on the platform
- b. Press and hold **MODE**, then press **ON/ZERO**
- c. Indicator displays **CAL.\_1**
- d. Press **M+** and manually enter the weight that intends to calibrate by utilize **M+** to increase and **MR** to move cursor. The value entered will be considered as the first point calibration
- e. When the weight is set, press **MODE** to begin the calibration and indicator will self calibrate zero point before proceed to the first calibrate weight that was manually entered
- f. Load the mass according to the display
- g. Press **MODE** when display is flashing
- h. Indicator displays **CAL.\_2**
- i. Press **MODE** for **YES** or **ZERO** to exit
- j. Enter the weight that intends to calibrate by utilize **M+** to increase and **MR** to move cursor

Please note that the value for second point has to be higher than first point

- k. When the weight is set, press **MODE** to begin second point calibration
- l. Load the mass according to the display
- m. Press **MODE** when display is flashing
- n. Indicator displays **CAL.\_3**
- o. Repeat **step i to l** if third point calibration is required
- p. Press **MODE** when display is flashing to complete the calibration procedures

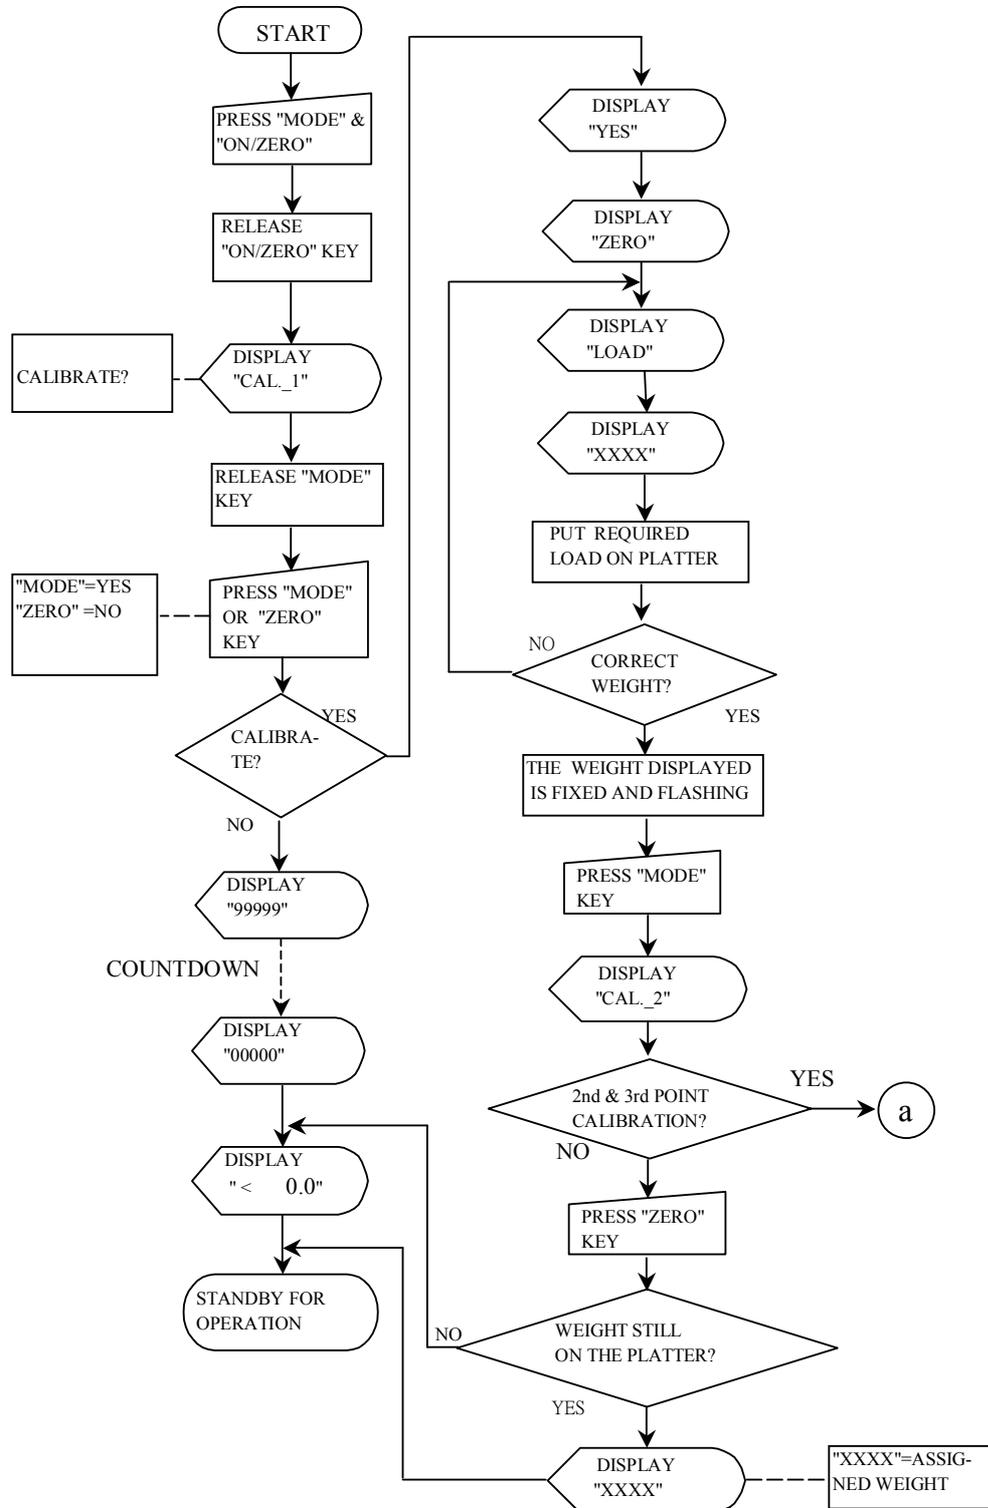

**Note:** When manually enter the weight for calibration, the first point must not be less than 1/100 of the full capacity. The second point must not be less than the first point. But it is highly recommend setting the second point at about 2/3 of the full capacity.

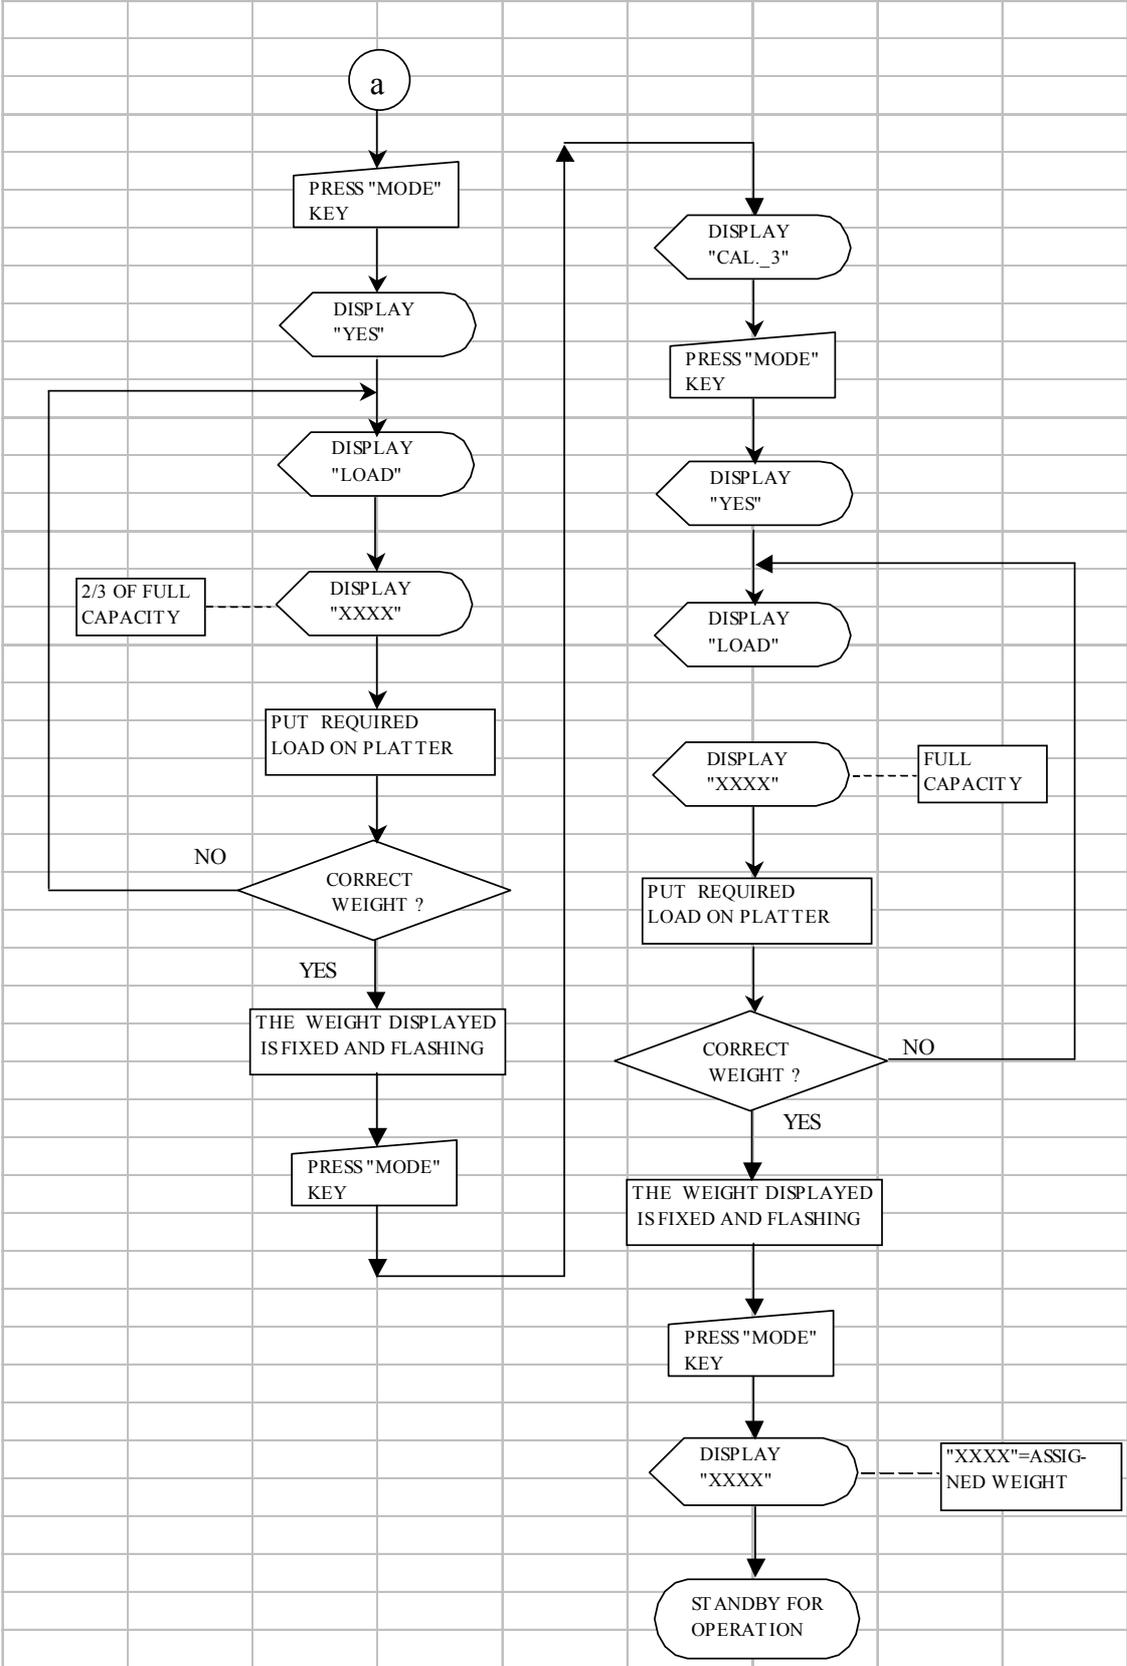

#### **2.4.3 DISABLE CALIBRATION AND INTERNAL FUNCTIONS SETTING WITH JUMPER SW. (JP1)**

The JP1 is used to control calibration and internal functions setting (F1 and F3). move this jumper to CAL-LOCK position to disable calibration and internal functions setting.

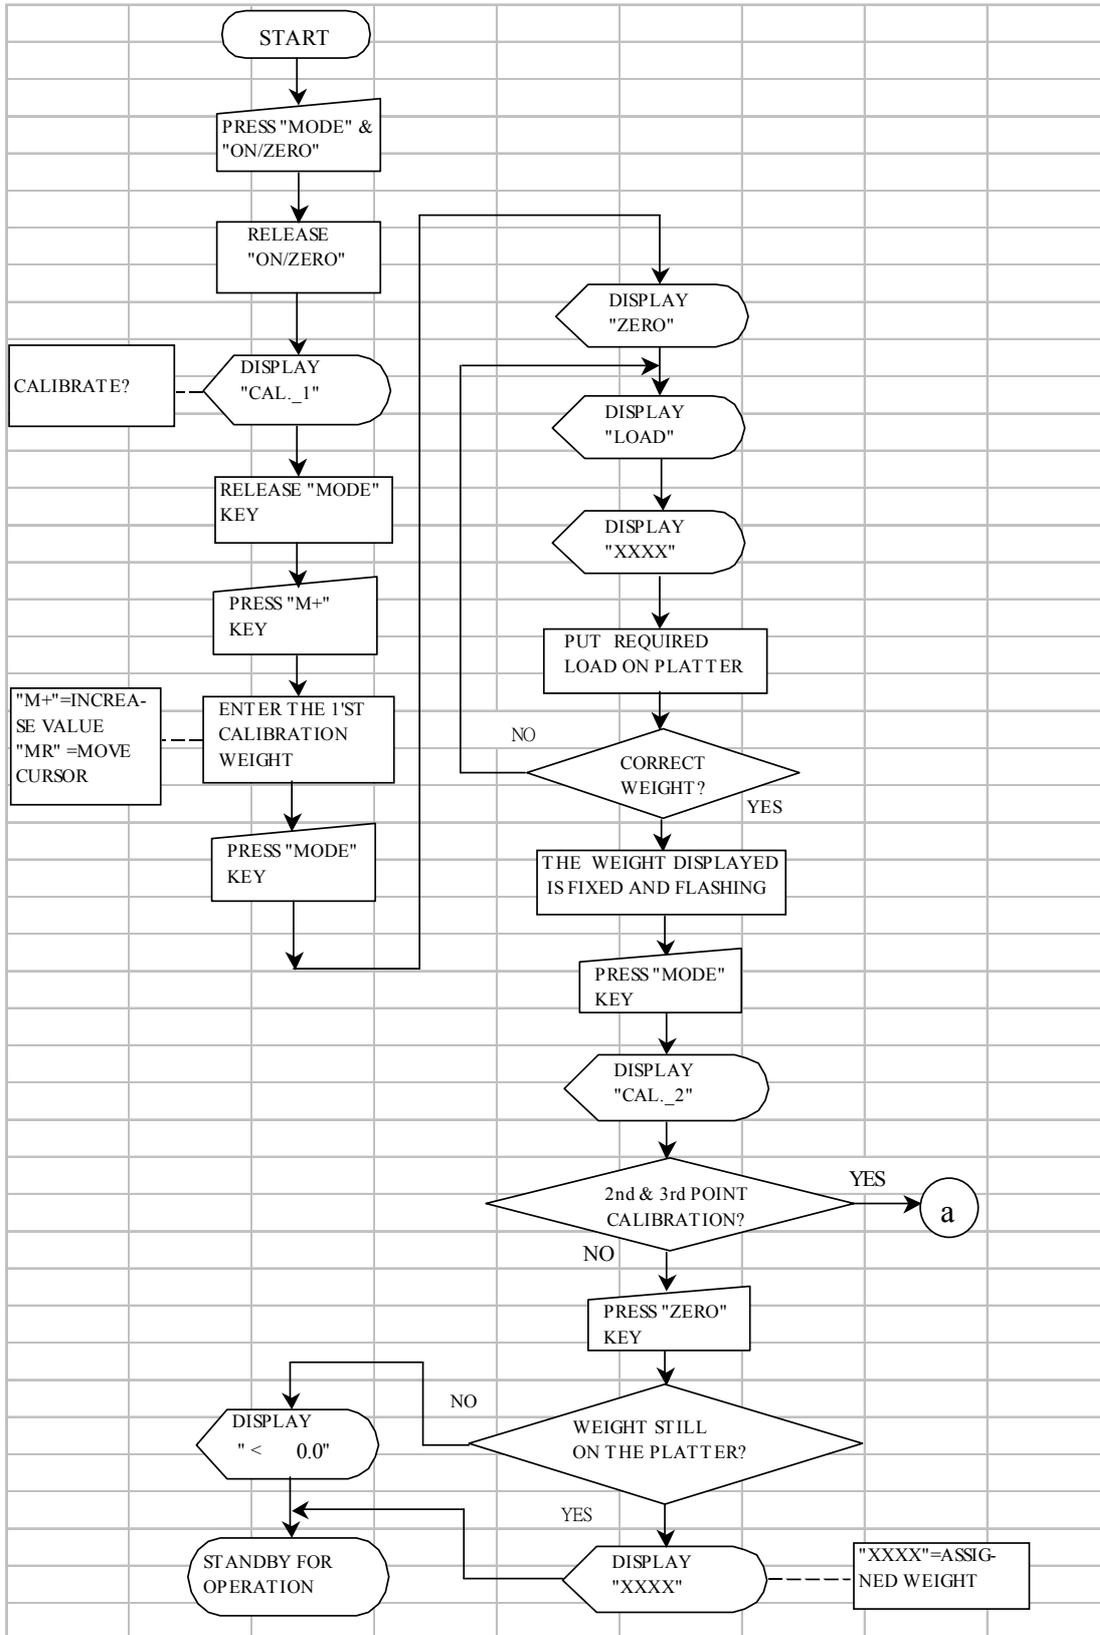

## 2.5 FLOW CHART

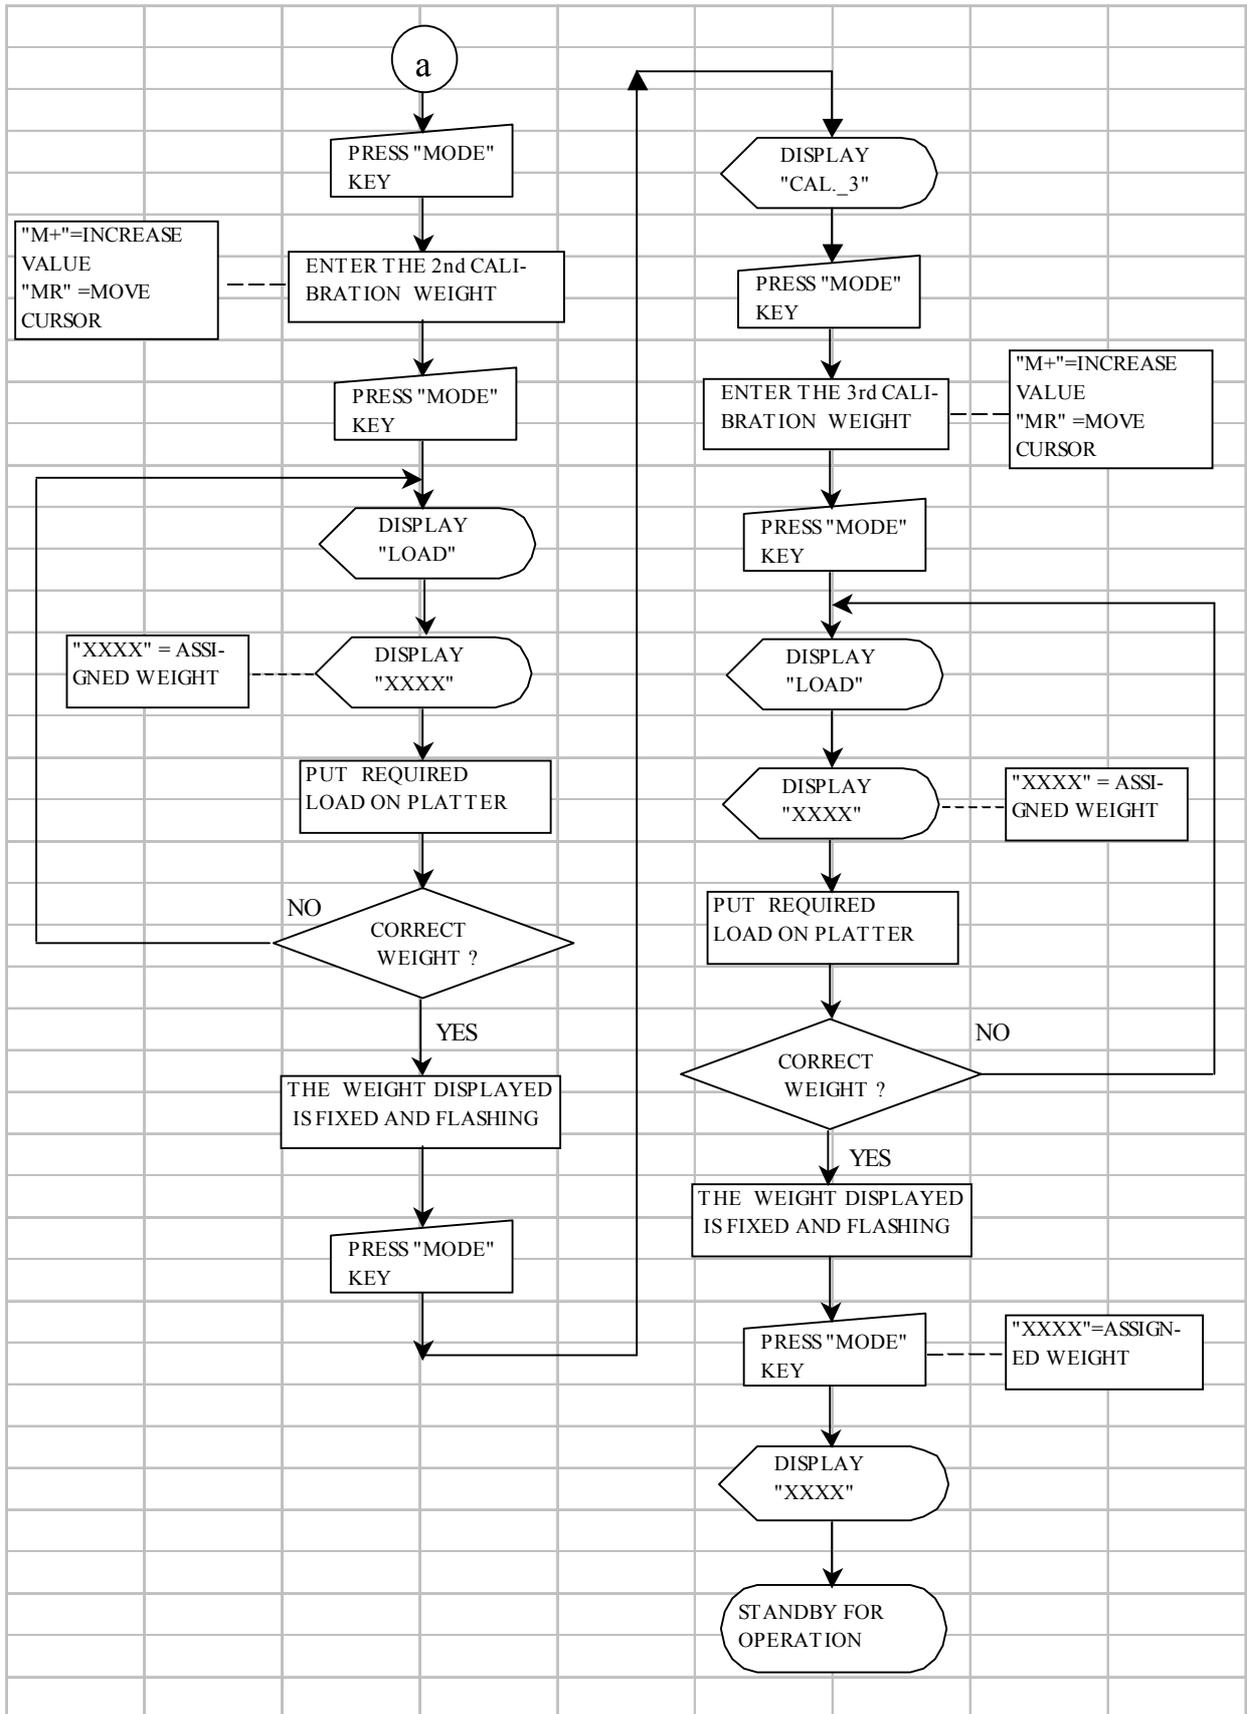

### 2.5.1 Auto Calibration

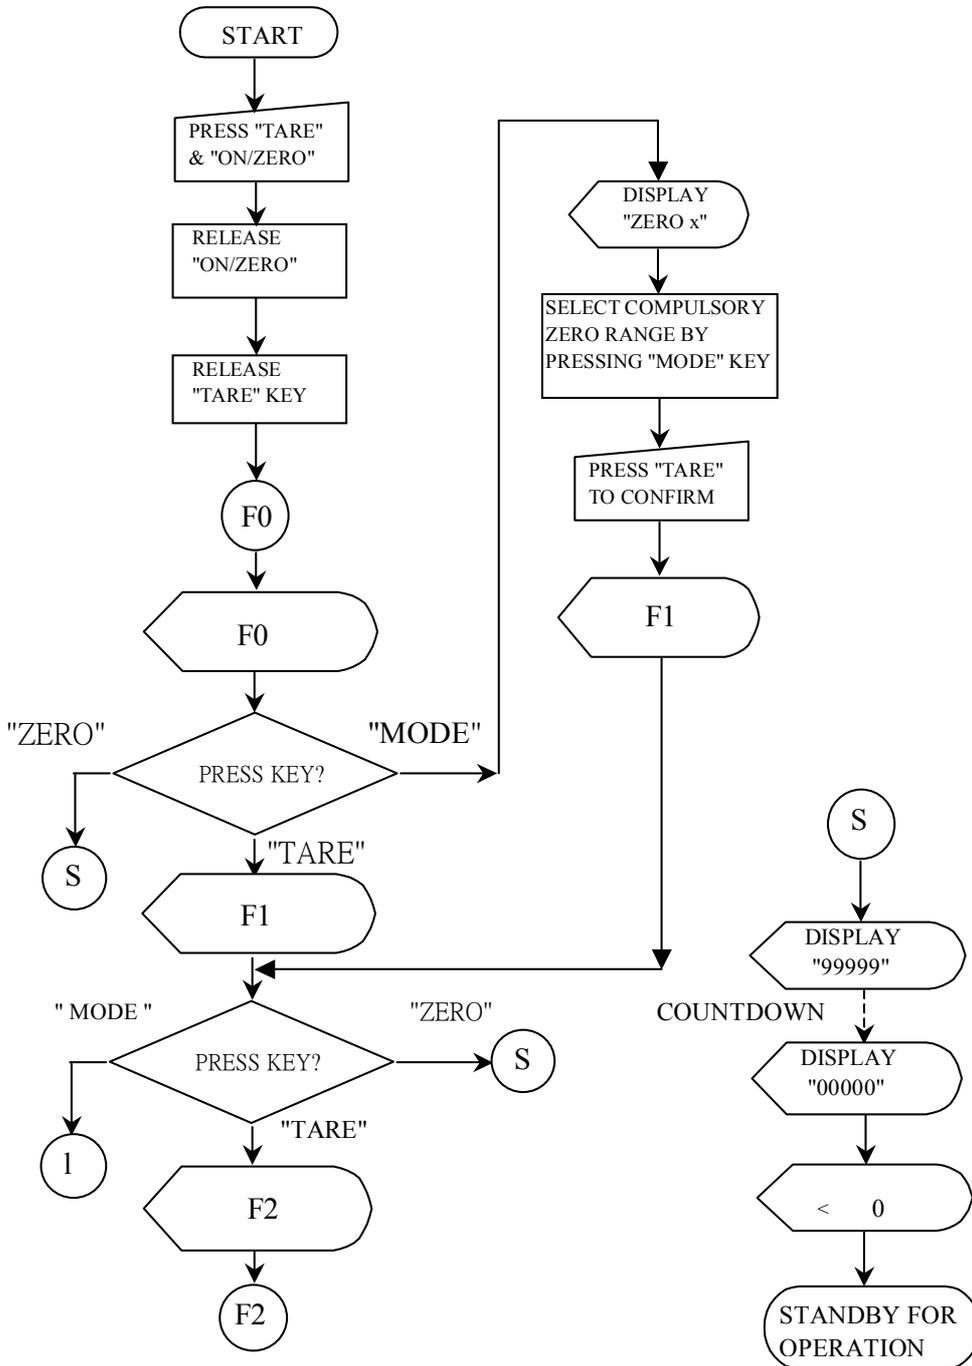

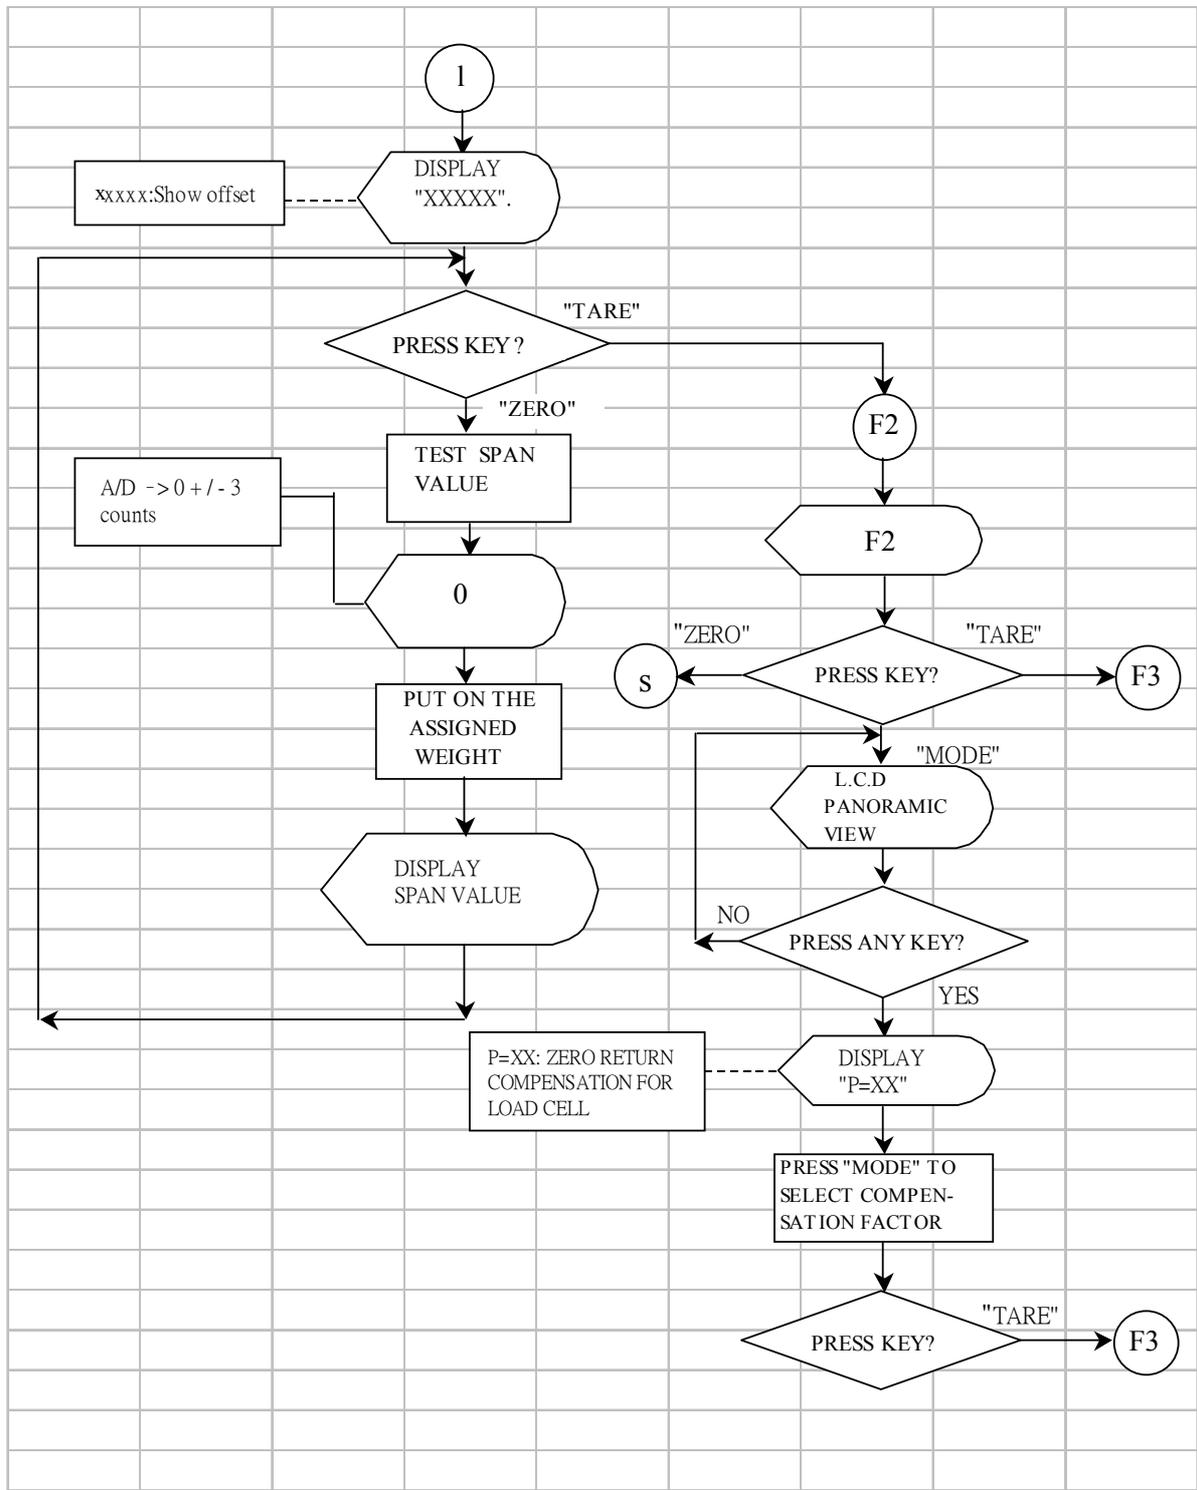

# ODD WEIGHT CALIBRATION

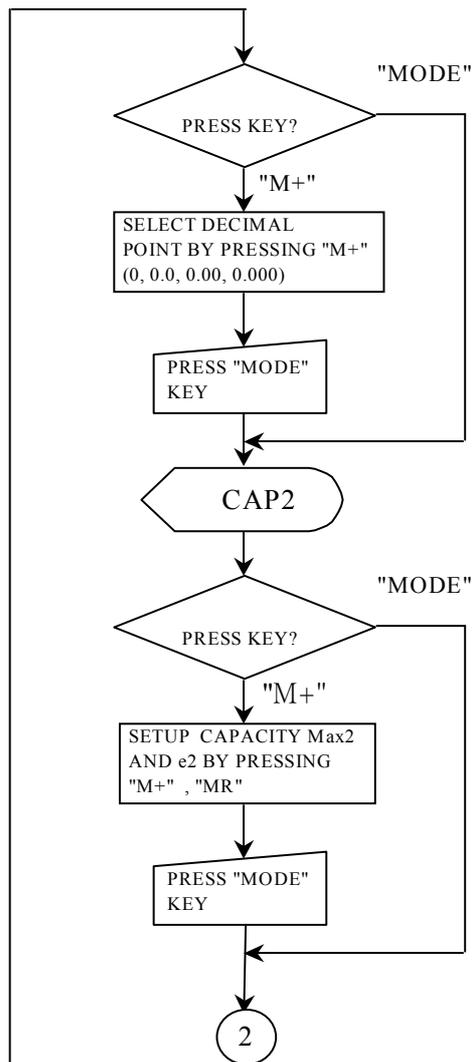

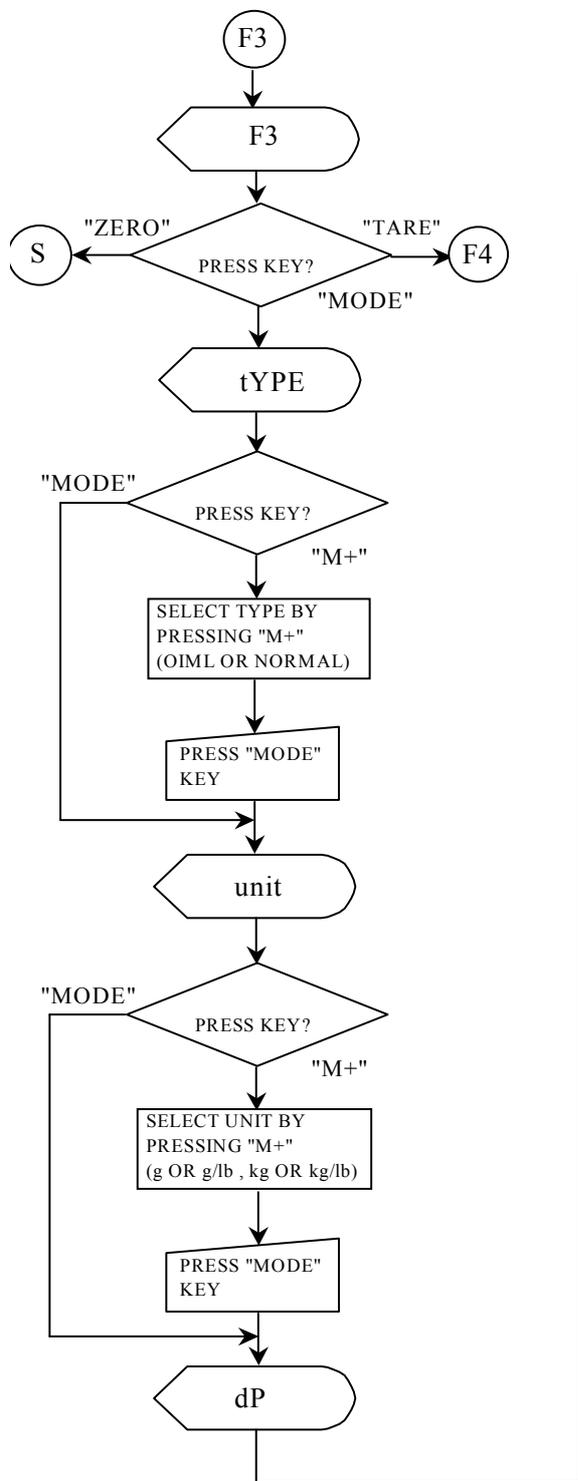

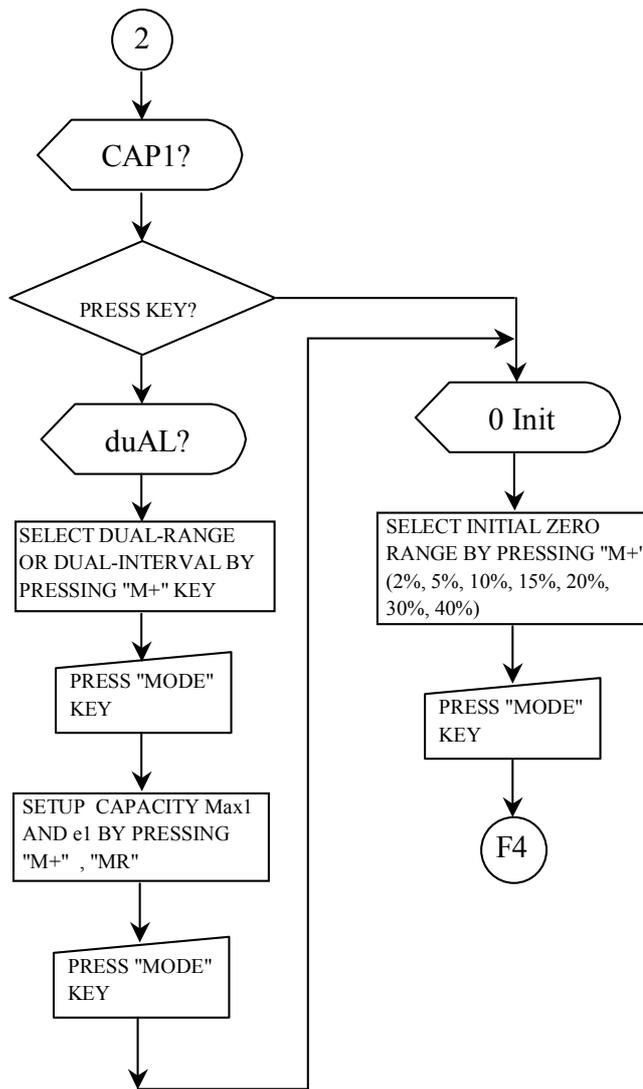

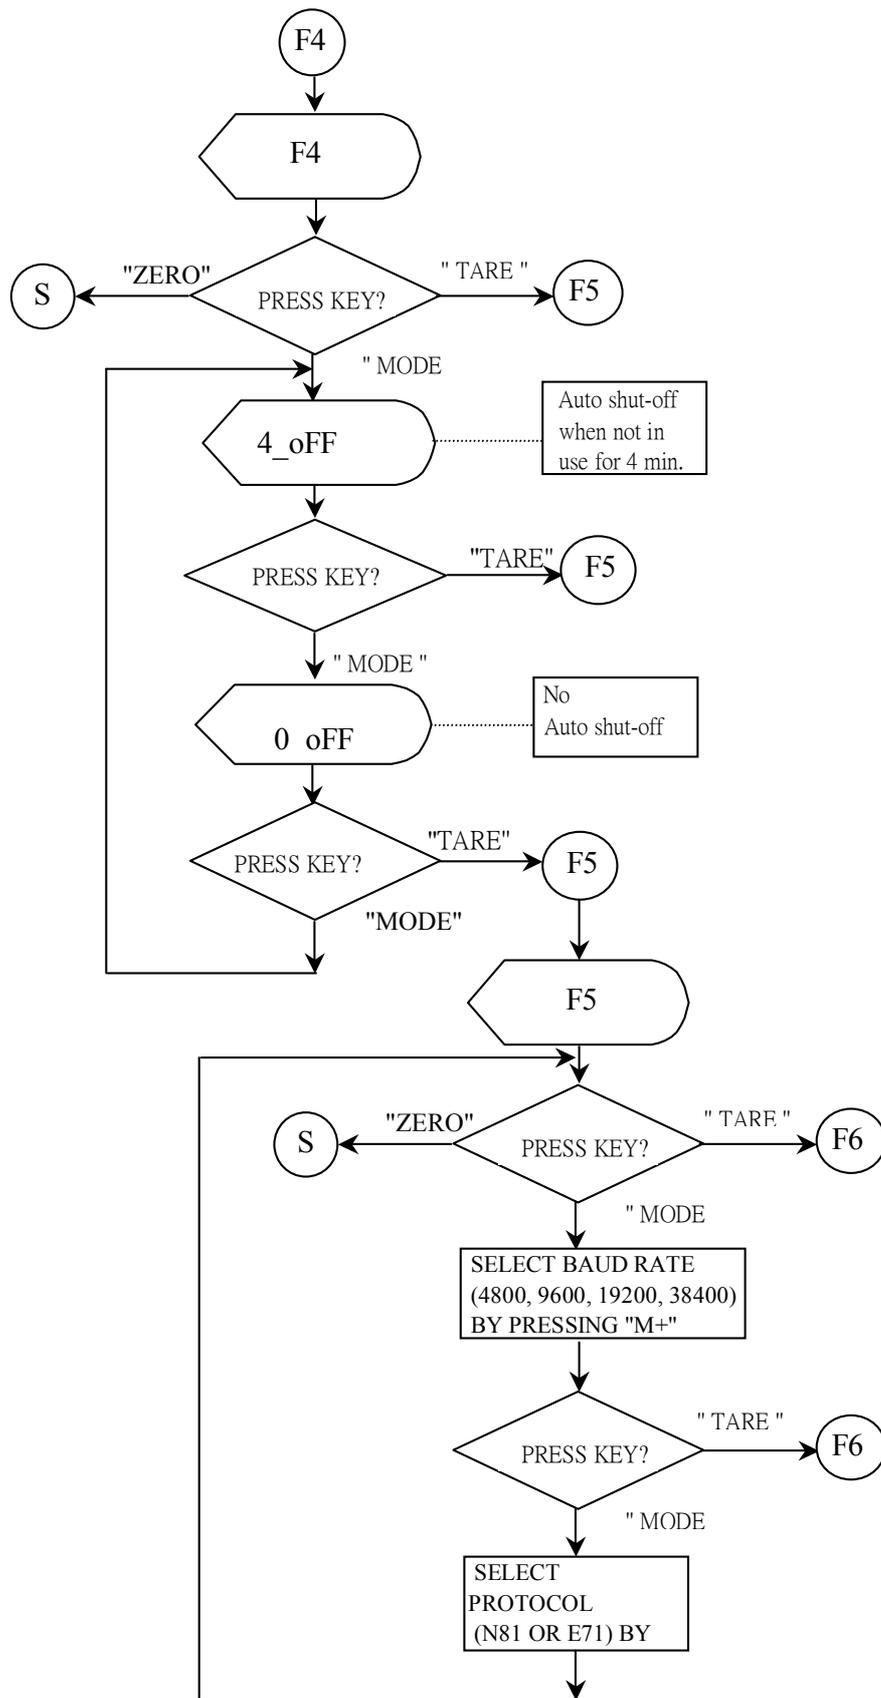

### 2.5.2 Function Test (for technicians only)

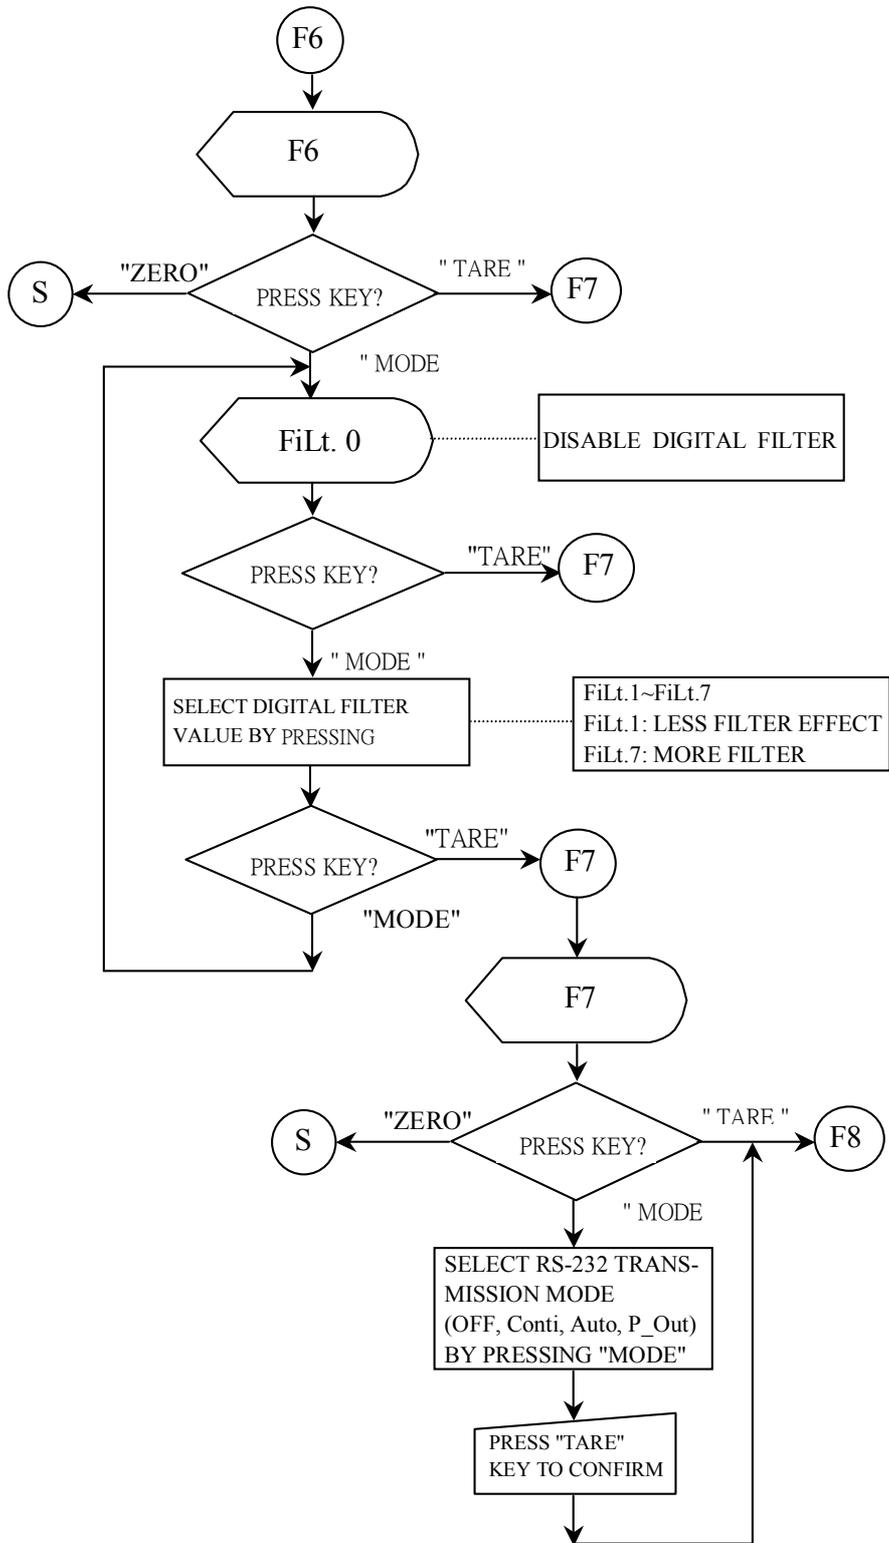

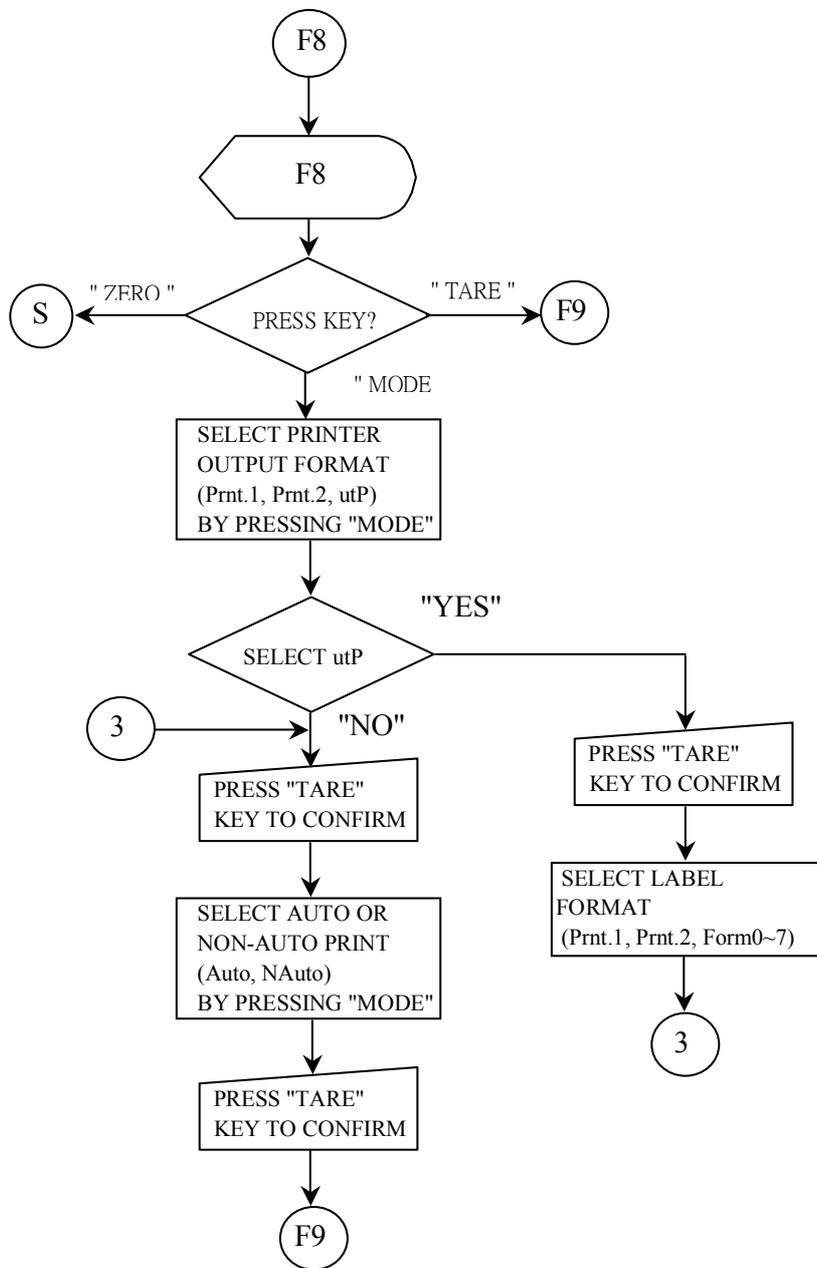

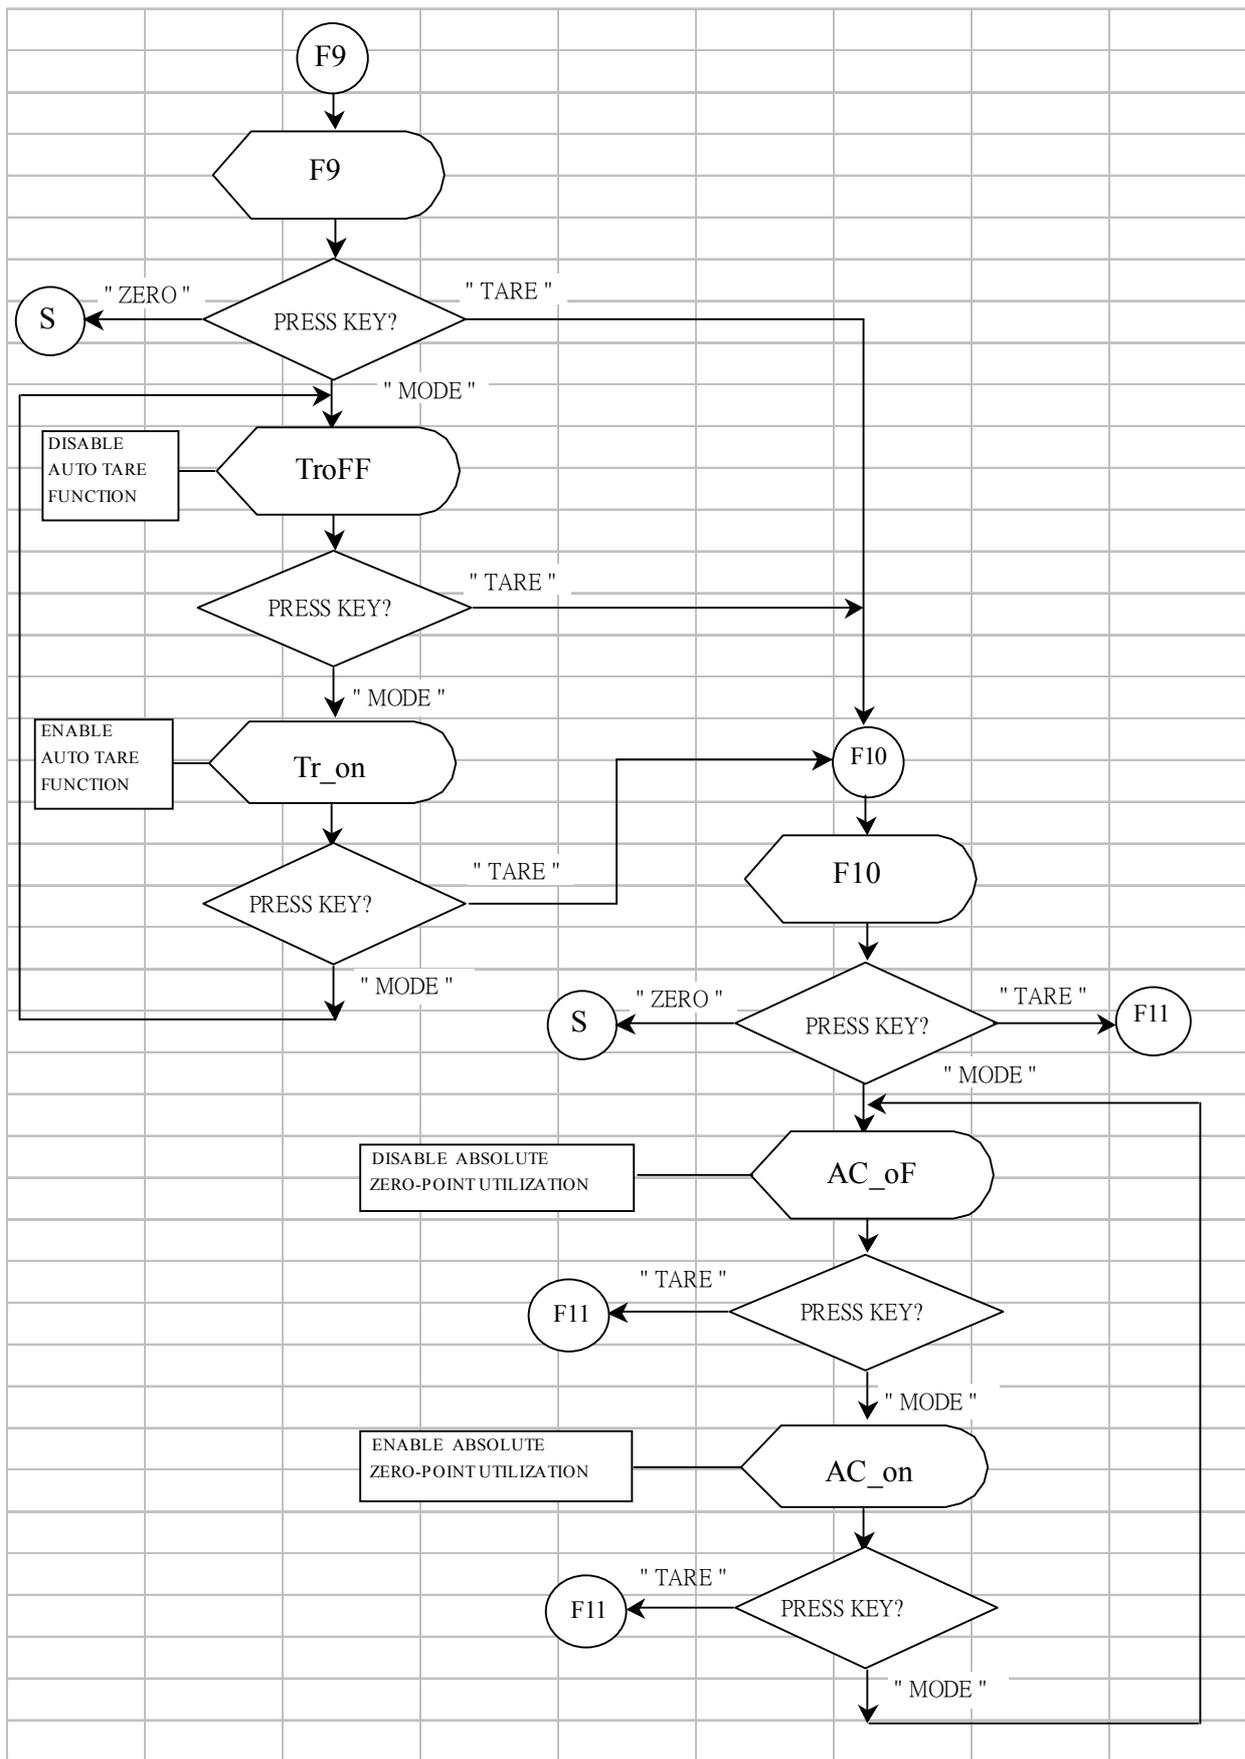

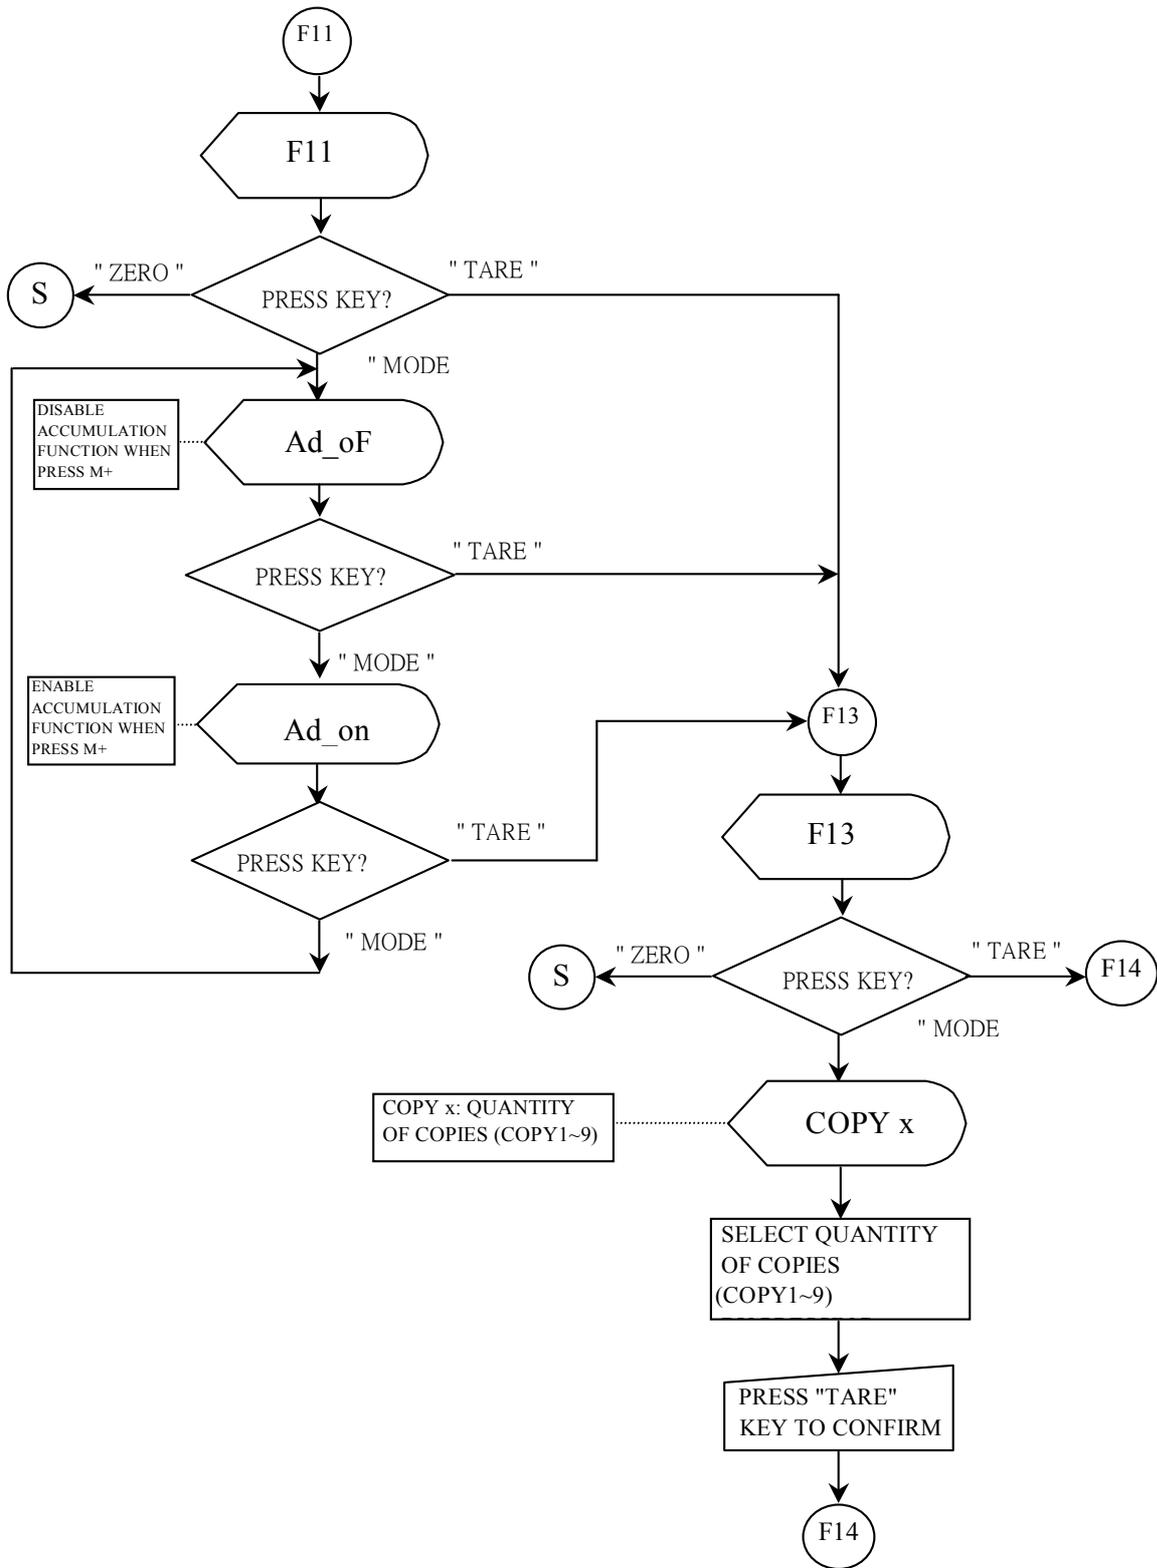

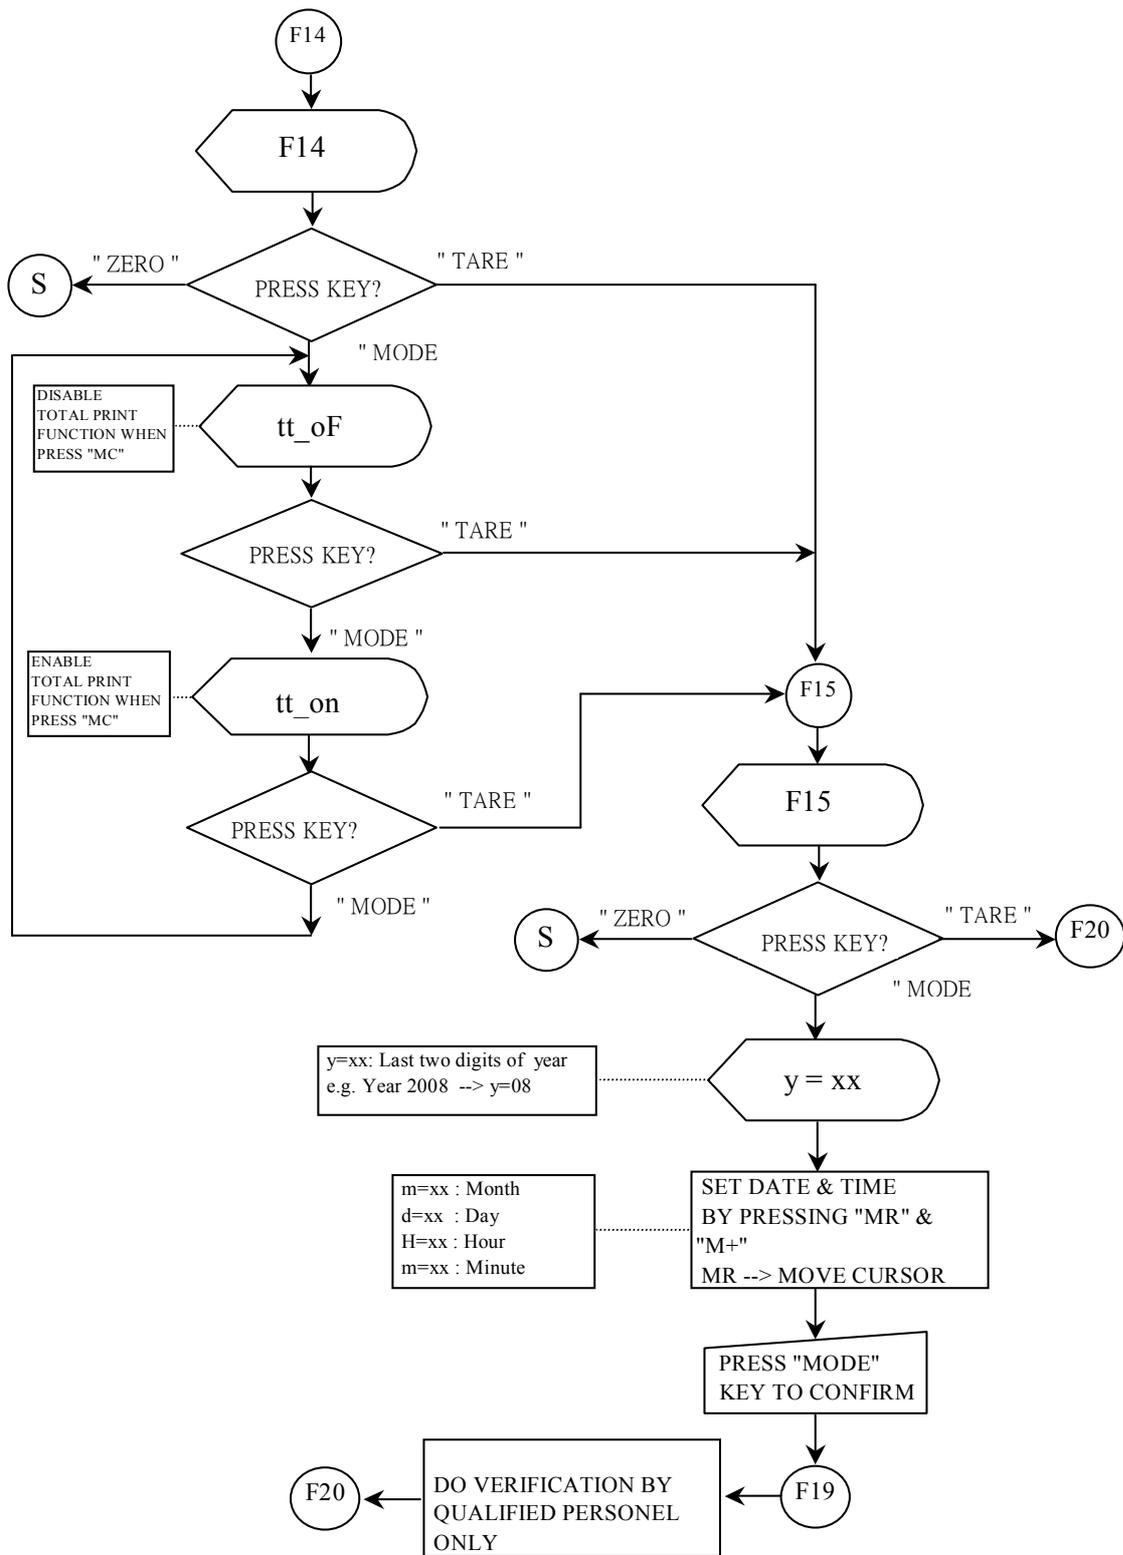

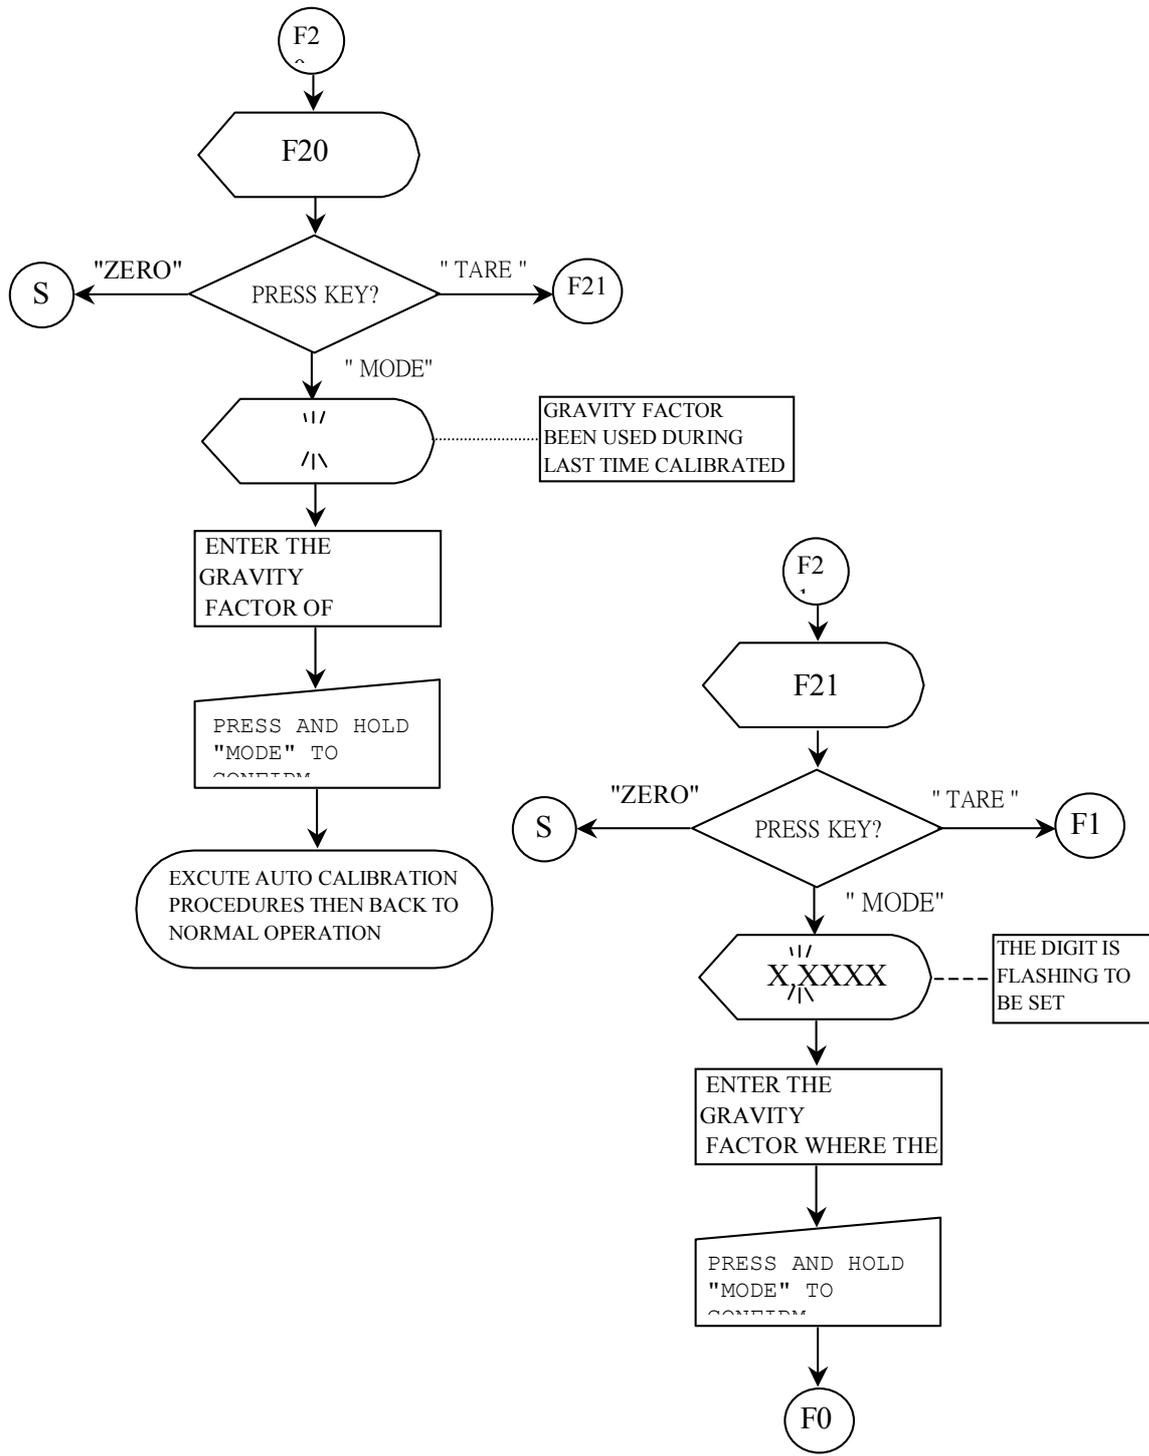

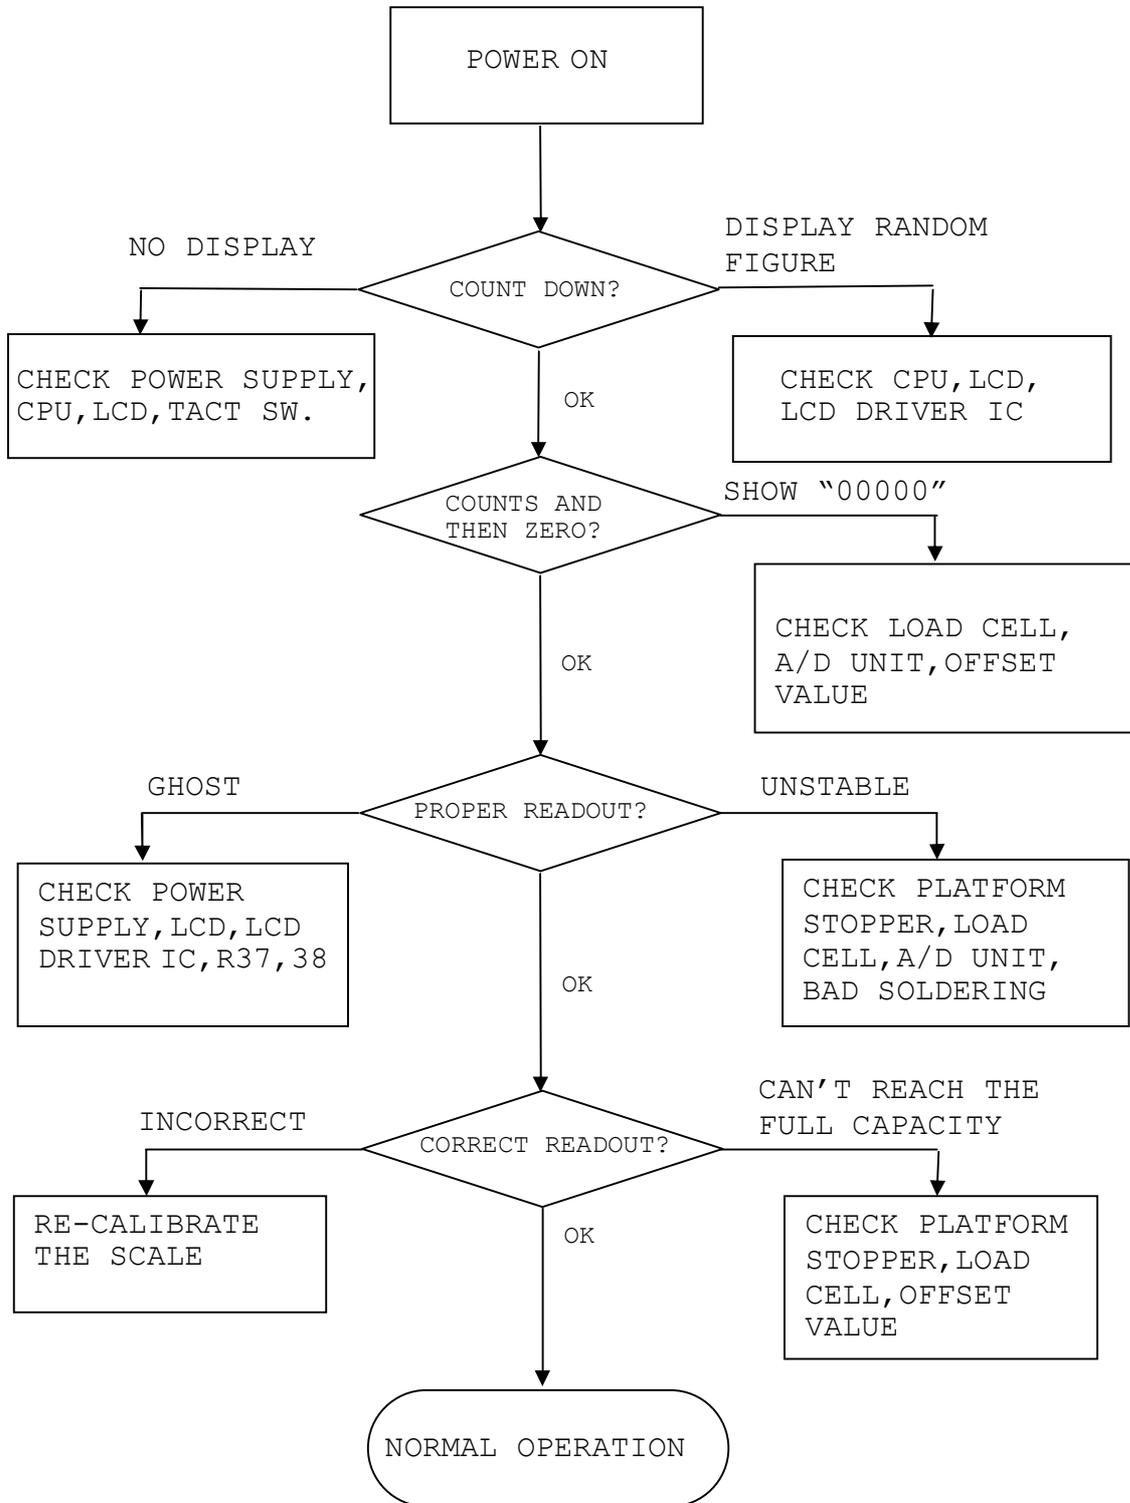

### 3. TROUBLE SHOOTING

#### 3.1 TROUBLE SHOOTING LOOP

**Description:**

- 1) Power source: Rechargeable Battery 6V/4Ah or AC adaptor (9V, 500mA)
- 2) +5V power drives digital circuit system.  
U11 (AIC 1722-5.0V or 1734-5.0V) is a 5volts Voltage Regulator.
- 3) +5V power drives analog circuit system.  
U2A (TPS77350) is a 5volts Voltage Regulator.
- 4) Auto-off:  
If the indicator is set with 4\_off of power-saving function or under LO-BAT situation, after fixed time interval, CPU will release a low potential signal to draw Q7 off, then Q1 cuts off, indicator will be shut down immediately.
- 5) Low Power Detection:  
The Q2 (A733) is designed to detect the power level. When battery power is less than 5.5V, the collector pole will become high potential, then CPU will instruct LCD display to show LO-BAT symbol.

**3.2.1.2 Input voltage: 5.5V or higher**

Check and recharge battery if voltage is less than 5.5V.

**3.2.1.3 System voltage (Vcc): 5V +/- 10%**

Check that the system voltage is within 5V +/- 10%

- a) less than 4.5V, the CPU may not work properly.
- b) more than 6V, ghost will appear on LCD.

**3.2.2 Platform Stopper Checking**

The platform device shall not touch anything around itself during operation. Check that the platform is not contacted with the upper (no load) and/or lower (with load) stopper.

**3.2.3 LCD Display Checking**

**3.2.3.1** Check that it is soldered and connected properly between LCD and driver IC (PCF8576), driver IC (PCF8576) and CPU.

**3.2.3.2** Check whether LCD is broken.

**3.2.4 CPU Checking**

**3.2.4.1** Check that all pins are seated properly into the socket.

**3.2.4.2** Check that the Crystal Oscillator works well.

**3.2.4.3** Check the RESET is normally low.

### **3.2.5 A/D Unit Checking**

**3.2.5.1** Check that the +5V powers are correctly fed to the A/D unit.

**3.2.5.2** Check that the signal output of loadcell is normal.

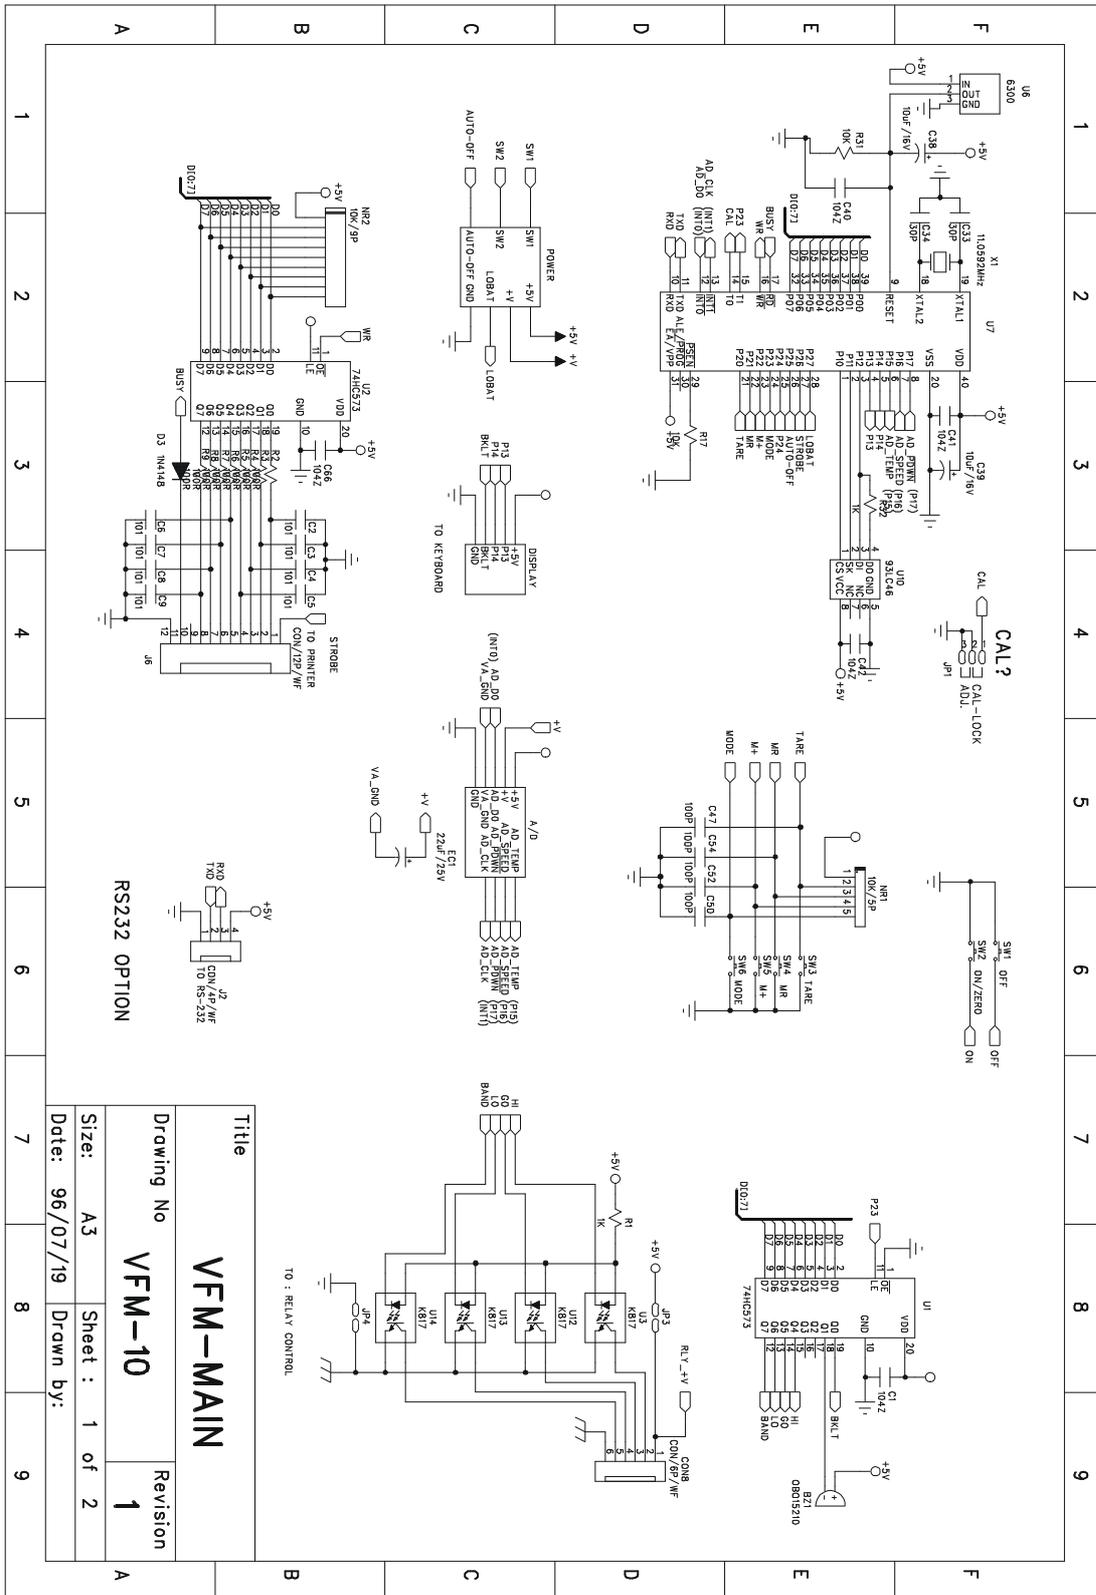

**3.2.5.3** Check A/D Converter (ADS1232).

When no error is found with the above checking procedures, the trouble can be caused on the loadcell or the PCB itself. Replace a new one could be better to identify the defective.

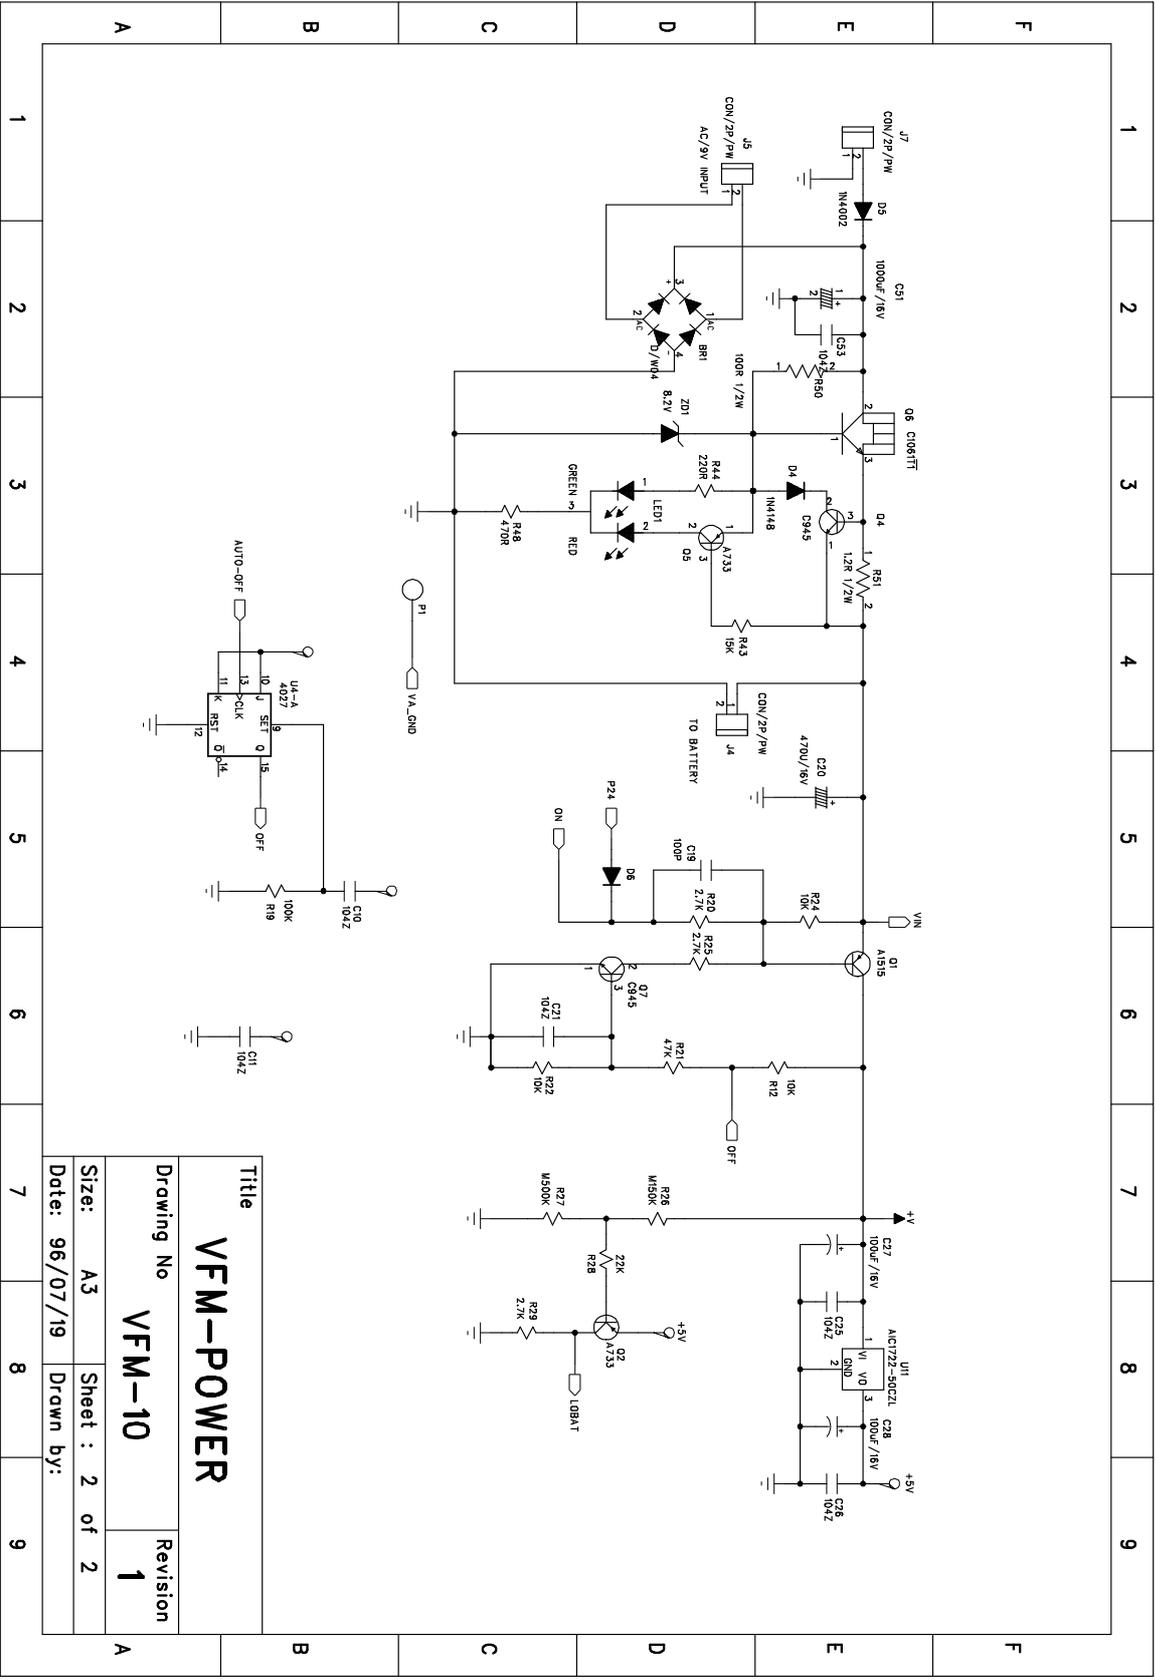

In this way, the readout of weight would be varied because of the output voltage of loadcell and different span value, so re-calibration is required after this replacement.
