

BROWER VERTICAL JUMP

Automatic Touchless Vertical Jump Measurement

- Measures vertical jump by subtracting an athlete's standing reach from each vertical jump
- Instant feedback. Button for average and best jump memory recall
- Self test, no operator required
- High throughput, measures 5 athletes per minute
- 48" detection zone allows for wide height range of athletes without the need for adjusting the unit's position
- High accuracy, 0.1 inches (0.25 mm) jump resolution
- Measures every jump, not just the highest
- Touchless operation, does not wear out with use
- Large detection area, 8 inches deep by 4 inches wide. More likely to measure maximum height than mechanical devices
- Portable quick clamp mounting system can be mounted on backboards, doors or weight lifting racks. Can also be permanently mounted to walls
- Long battery life: over 4500 jumps. Uses three AA batteries
- 3 modes of operation: vertical jump, calibrated reach, and height from floor
- Optional radio link to Brower Timing TC system
- Limitations: will not operate in direct sunlight
- Ships in reusable protective tube. Shipping weight: 12 lb.
