

DR. KILLIGAN'S®

SWEET SURRENDER

PRODUCT USER GUIDE

Greetings Friend,

I'm Dr. Killigan, and I'm here to help you restore peace to your home. You now possess a tested and proven fruit fly lure and killer that will protect your produce, peace and sanity. In this guide, I provide tips to help you be successful with eradicating these scoundrels from your home.

Keep your head up. You're now equipped to enjoy a fruit fly free home!

Cheers,

Dr. Killigan

DR KILLIGAN'S PROMISE

We firmly stand behind our products. If you're not totally satisfied with your purchase, we will replace your product or offer a full return. 100% Guaranteed. No risk to you.

HOW TO USE

Pour 2 oz into a clean, empty container or existing trap.

01

02

Place container on a flat surface within a few feet of fruit fly activity. Check periodically. You can also use more than one container in different locations to increase catch rates.

03

When the flies have disappeared, give yourself a cheer. Well done friend.

EFFECTIVE AGAINST:

This fruit fly lure and killer is specifically formulated to help you achieve a fruit fly free home. It was formulated specifically for fruit flies a.k.a. *Drosophila Melanogaster*.

HOME USE:

Safe to use across all home surfaces in areas you may notice fruit fly activity. It is always recommended to clean up any spills as they happen.

PRODUCT USE:

Sweet Surrender is an effective fruit fly attractant that can be placed anywhere fruit fly activity has been seen. This product begins to work as soon as it is set out. It isn't as involved as an insect spray.

Non-Toxic: Sweet Surrender is formulated with safe, nonirritating ingredients, featuring a blend of vinegar and sucrose as key ingredients.

Safe around Pets and Children: Sweet Surrender can be placed where child and pet activity abounds, although it is recommended that it be kept out of their reach. They may think it a fun beverage to quietly sip on (with or without fruit flies).

SWEET SURRENDER FAQ's

HOW LONG WILL SWEET SURRENDER LAST?

Sweet Surrender will remain effective for two years by following these simple guidelines: Avoid light and heat and keep your bottle in a dry, cool place. In addition, two of its ingredients are red wine vinegar and citric acid, which are natural preservatives. You may even reuse an already poured portion for up to 4 weeks time.

WHAT CONTAINER(S) TO USE?

A glass mason-style jar is recommended, though other cylinder-type containers will work fine too. Make sure that it is able to hold at least 2 ounces.

WHAT IS THE BEST LOCATION/PLACEMENT?

Fruit Flies are also attracted to light, and to a lesser degree, heat. If you are not experiencing positive results, experiment with different locations in your kitchen. A jar of Sweet Surrender placed on a windowsill can sometimes outperform the attractant being placed just next to the bowl of fruit.

WHAT IS THE LIFESPAN OF A FRUIT FLY?

Under optimal growing conditions, the lifespan is about 50 days from egg to death. Within that time-frame, a female fruit fly can lay up to 100 eggs per day and upwards of 2,000 eggs in her lifetime.

IS THERE ANYTHING ADDITIONAL I CAN DO TO HELP GET RID OF MY FRUIT FLY INFESTATION?

Take out trashes, get rid of overly ripe fruit, clean up spills promptly, throw away old wine or beer bottles, check inconspicuous places (under fridge, oven, below cabinets) for food debris.

WILL THIS PRODUCT ATTRACT DRAIN FLIES AND GNATS?

Although this product was not intended to attract drain flies or gnats, but we have caught both in our testing.

WHAT DOES A FRUIT FLY LOOK LIKE COMPARED TO GNATS AND DRAIN FLIES?

Fruit flies have rounded bodies, where as gnats have elongated bodies and dangly legs like mosquitos and drain flies, though they have rounded bodies, are fuzzy with moth-like wings. In addition, fruit flies are solitary, whereas gnats and drain flies swarm.

READY FOR MORE?

If you have an insect problem, **Six Feet Under Non-Toxic Insect Spray** is an expertly crafted blend of select essential oils designed to eliminate ants, roaches, flies, mosquitoes, moths, ticks, fleas, earwigs, silverfish, and other bugs. While this all-natural insect killer is safe for humans and pets when used as directed, it's deadly for destructive insects.
