INSTALL GUIDE

Please note the LED Tape is designed to be mounted in a straight line. Mounting them with a bend in them will cause the Tape and the Resin to fail over time.

Lay out your kit & prepare the surfaces using the provided wipe.

We recommend using the 3M tape on the back of the strips purely for when you are positioning the kit. Take care not to leave loose cables that can be caught in any moving parts.

The brackets and screws provided are designed specifically to be used with this kit. They help prevent the kit from sagging as the 3M tape will become less adhesive over time.

With the kit held in place by the 3M tape, fit the brackets at 100mm intervals for best results.

We would also recommend that you fit a Switch to isolate the Kit from the Battery when not in use. The lack of a Switch may cause your Battery to become flat.

Once the kit has been fitted it can be operated one of two ways:

- Use the provided hand held remote control
- Scan the QR code located on the control module to install the app and enjoy a wider range of control.
