

PRACTICE GOOD HAND HYGIENE IN OUR WORKPLACE.

The Centers for Disease Control and Prevention and the U.S. Department of Health and Human Services recognize hand hygiene as an important method to help stop the spread of germs in the workplace. This includes washing your hands with soap and water and using alcohol-based hand sanitizers.

Use PURELL Instant Hand Sanitizer when soap and water are not readily available.

PURELL® kills 99.99% of most common germs that may make you sick.
