

Multi-Surface Ceramic Clearcoat

PURE AIR COATING

*Transforms your HVAC system into an **AIR PURIFIER** that Never Stops Working*

Reduces your energy bill by 10–20%*
Destroys all foul musty odors
Extends the life of your units

Waffle House #265, Phoenix Arizona

15 year old 5-ton roof unit before cleaning and coating

These older units produced dramatically colder air after all condenser and evaporator coils were cleaned and coated. Run times were reduced by over 50%, slashing energy use while also improving air quality.

Air temperatures measured during the cleaning and coating process

SIMIX improves indoor air quality

Reduce sick days

Cleaning and coating your evaporator coils destroys airborne germs, viruses, odors and generates clean fresh air.

We used AirAnswers™ to test SIMIX at a busy Chicago area diner.

**The Result:
Air cleaner and fresher
than outdoors!**

Airborne contaminant	Before cleaning and coating		After cleaning and coating with SIMIX		Result 3 weeks later	
		Result on 6/7/21		Result 1 week later		Result 3 weeks later
COVID		Not detected		Not detected		Not detected
Grass pollen	High	0.13		Not detected		Not detected
Cat allergen*	Medium	0.37	Low	0.11	Low	0.11
Dog allergen	Low	0.28	Low	0.20		Not detected
Mold allergen	Medium	5.89	Medium	4.71		Not detected

Air quality results were achieved without UV-C light source

AirAnswers is the only commercially available air sampling device that collects all biological particles including viruses, bacteria, allergens and molds. Samples are analyzed in their ISO certified laboratory by RT-PCR using protocols designed and provided by the Center for Disease Control and Prevention.

*It's not uncommon to see changes in allergens, especially with pet allergens, from run to run. Cat allergen is very tenacious and can stick to cat owner hair, skin, and clothing. Cat owners can easily transfer cat allergen everywhere they go. The higher cat allergen may be due to a cat owner coming into the establishment.

The Key to Better Indoor AIR QUALITY

What is SIMIX?

SIMIX Ceramic Clearcoat is a non film-forming, super-hard liquid glass that will never yellow, chip, peel or crack. Just like in glass, the primary ingredient in SIMIX is silica (sand). That is mixed with potassium and lithium, which are very conductive. SIMIX conducts heat. It is not an insulator, like all other coil coating products on the market today.

What is hygroscopic?

A continual process to attract and adsorb water molecules from the air to the surface. This process draws heat from the coils and also enhances the photocatalytic oxidation technology which destroys airborne germs, viruses, odors and generates clean fresh air.

Why do you need SIMIX?

Air conditioners start losing efficiency the moment you install them. Tiny gaps are created by the expansion and contraction of the tubes and fins. Airborne corrosive particles and salt ions enter those microscopic gaps, corroding the unit and making it less efficient. SIMIX fills in those microscopic gaps, leaving behind a smoother surface that improves heat transfer.

What does SIMIX do?

SIMIX fills in microscopic gaps between fins and tubes created by salt, air pollution, and expansion and contraction.

SIMIX is a conductor. It conducts heat away from the coils.

SIMIX allows the fans to pull more air through the condenser and evaporator coils, destroying odors and generating clean, fresh air, indoors and outdoors.

RESULTS

- Destroys airborne germs, viruses, odors and generates clean fresh air
- Cuts down on sick days
- Reduces PM time
- Significantly improves air flow
- Prevents airborne kitchen grease build-up
- Prevents salt damage
- Can be easily applied in the field
- Units stay cleaner longer
- Adds years to the life of unit
- Save 10% to 20%
- Extends life of equipment
- Payback 2–3 months

SIMIX dramatically improves air quality when airflow comes in contact with the high pH coating

Mold, bacteria and pollen – and the odors they create – live and grow on surfaces that have a pH level between 4.8 and 9.2. While most cleaning and coating products are pH neutral, SIMIX Multi-Surface Cleaner/Degreaser/Sanitizer (pH 12.5) and SIMIX Multi-Surface Ceramic Coating (pH 12.3) create a permanent, safe, high pH that prevents the growth of mold, bacteria and viruses.

Preserves • Prolongs • Protects

Coats the entire unit including cabinet interior and exterior, fan blades, condensing, evaporator and heat exchange coils

SIMIX will help all exterior surfaces look better, last longer and stay cooler

Before coating air temp 83°F. surface temp 120.2°F
 After coating air temp 85°F. surface temp 83.7°F
 Lowered by 36.5°F

- Enhances true color • Prevents further oxidation
- Prevents all automotive fluids from attaching
- High traction coating - Reduce slip and fall
- Reduces salt and freeze-thaw damage
- Prevents algae, mold, and mildew regrowth
- Water-based • Zero VOCs • No odor
- Never use bleach again
