## NUERA PROBIOTIC

### WHY DOES OUR SUPPLEMENT WORK SO WELL?

Our supplements work because they are made from a unique natural blend of heat-treated probiotic and yeast cells, feed enzymes and oligosaccharides. Each ingredient has been included for a specific purpose which results in a synergistic effect on the entire digestive tract from the mouth to the colon.

Using the highest quality ingredients is a characteristic of this range and helps this product be extremely effective. When considering a supplement consider the complexity of these ingredients.

### This is why we call our supplement multifunctional.

This multifunctional probiotic supplement aids in the digestion, and the optimal health and wellbeing of all pets. If you require more performance, greater immunity to illness or simply a more content animal then this supplement could be your solution. All these things can be achieved by ensuring inner health.

### WHY USE A SUPPLEMENT?

The administering of health supplements to both humans and livestock is practiced worldwide. Unfortunately, not as much emphasis has ever been placed on the supplementary needs of domestic pets.

Did you know that a lot of what you feed your animal is excreted in their stool or urine? What you don't consider is the wasted nutrients that are excreted and whether there is a better way. If the animal's system could absorb all the nutrients would that mean they would be healthier and require less food? Would their excretions smell less? **Well, simply YES!!**

This product was designed with that philosophy in mind. Create **INNER HEALTH** which will result in **OUTER HEALTH**.

Poor health leads to illness, some easy signs you can detect is skin and coat condition, smell from stool and ammonia from urine.

**Our range will assist your animals to achieve a high level of inner health.**

### IMPORTANCE OF BACTERIA

Promoting beneficial bacteria in the animal's digestive tract is imperative for optimum health, performance, and wellbeing. The function of beneficial bacteria and the benefits of using supplements are extremely vast.

Beneficial bacteria fights pathogenic bacteria that causes illness. Also, bacteria provide the mechanism to distribute nutrients from food to the parts of the animal's body that require it.

Without supporting the beneficial bacteria within your animal, it will always be prone to sickness and bad performance. Supporting the beneficial bacteria can lead to continual health and, in turn, result in less veterinarian expense in the long term.
