

S6 Pro Datasheet

Product Overview

The Domin S6 Pro direct drive servo valve (DDV) has been designed to achieve the best characteristics from two competing valve technologies: fluid amplified EHSVs and DDVs.

The S6 Pro has the size, mass, and dynamic capabilities of the most compact EHSV, and the low quiescent leakage and reliability of the best DDV.

Key Features

- Onboard electronics with spool position feedback
- Rated flow of up to 60 l/min (at 70 Bar ΔP)
- Based on the NG06 port pattern
- Bandwidth > 190 Hz (-3 dB, up to $\pm 25\%$ FS)
- Low power consumption of less than 5 W
- Chip shear capability of greater than 400 N
- Low weight of less than 600 g

Customisation

The S6 Pro is designed to be customised. Standard modifications include:

- Choice of rated flow up to 60 l/min
- Multiple voltage or current control options
- Various seal materials available
- Non-standard configurations are available.

- 1) Conditions outside the absolute maximum ratings may cause permanent damage to the valve. These are absolute ratings only. Operation of the product outside of the nominal operating conditions is not guaranteed and may affect product reliability.
- 2) The valve supply must be protected with a 5 AT fuse or equivalent overcurrent protection device.
- 3) Valves with a current command signal use a 0.1% tolerance shunt resistor to measure demand current.
- 4) The value of the shunt resistor to measure output current should not exceed stated maximum value.
- 5) A current in this range will disable the motor drive until a current outside this range is received at the command input.

Valves with Enable Function

Valves can be provided with an enable function. This allows the valve to be enabled or disabled by varying the voltage into the enable pin (see page 6 for a pin out diagram). Note that valves with a code C command type can also be enabled or disabled using the command signal; see the corresponding table above for further details.

Normal Operating Conditions		Min.	Typical	Max.
Voltage for Drive Enable	V	9	-	28
Voltage for Drive Disable	V	0	-	5
Input Impedance	Ω	50	-	-

Electronic Interface Diagrams

6 + PE Circular Pin Connector (Code E)

Type: Case-Mounted
Termination: Connector according to EN 175201-804/MIL 5015 equivalent, shell size 14
Number of Contacts: 7

Pin	Function	Description
A	Supply +	+24 V
B	Supply 0 V	0 V
C	Output – Enable Input ⁽¹⁾	Output 0 V Reference Drive Enable Input ⁽¹⁾
D	Input +	Differential Input Signal, +
E	Input –	Differential Input Signal, –
F	Output +	Output Signal
G	Earth	-

1) When the enable function is selected, the function of pin C is the enable input. This replaces the standard pin function.

4 Pin Circular Connector (Code E4)

Type: Case-Mounted
Termination: Connector according to EN 175201-804/MIL 5015 equivalent, shell size 14
Number of Contacts: 4

Pin	Function	Description
A	Supply +	+24 V
B	Input +	Differential input signal, +
C	Input -	Differential input signal, -
D	Supply 0 V	0 V
