ROAD, MARLBOROUGH

Ram Sale Catalogue

INTRODUCTION

Welcome to our 6th on-farm ram sale. We are thrilled to open our gates and present a fine selection of top-quality, purpose-bred rams for your consideration.

Today is an opportunity for you to witness firsthand the culmination of our dedication to breeding excellence. As you inspect our rams, and engage with our team, we're confident you'll find the perfect additions to enhance your flock.

Thank you for joining us on this day dedicated to showcasing the finest genetics. Lot 33 through to Lot 48 are progeny from our breeding program at our Cheviot farm where the focus is on health and welfare traits. These rams are not classified as merino.

Thanks again to Mark Ferguson and the NextGen team for continually challenging us to bred an easier care and more profitable sheep.

- Willie & Susan Macdonald

SALES INFORMATION

AUCTION

Bidding is exclusive of GST, it will be added to the purchase price. The sale will be run by an open-cry auction. Buyers need to be registered prior to the auction starting. At the fall of the hammer the lot becomes the property of the purchaser.

DELIVERY

All Rams will be delivered free of charge to the purchasers closest sale yards.

INSPECTION

Sale rams will be available for viewing from 11am with the auction beginning at 2pm.

HEALTH

All rams have been checked by a veterinarian and are guaranteed ready to work. They are certified Brucella Ovis Free. Vaccinated against Johne's Disease.

SEMEN MARKETING RIGHTS

Middlehurst retains 100% of semen marketing rights on all rams sold.

LUNCH

We welcome you to enjoy lunch prior to the sale, and refreshments and nibbles at the conclusion of the sale.

Understanding MERINOSELECT ASBVs

- Australian Sheep Breeding Values (ASBVs) allow you to compare the genetic differences between rams.
- Rams contribute half of a lamb's genetics. Rams have the largest impact on genetic progress, as they have more progeny throughout their lifetime.
- ASBVs are based around 0. It is important to compare ASBVs against current industry percentiles, which can be found on the Sheep Genetics website.
- ASBVs are reported with an accuracy figure. The higher the accuracy, the more information there is contributing to the ASBV, and the closer it is to the true breeding value of the animal.
- ASBVs are reported with an age stage, shown as a letter at the beginning of a trait e.g. weaning weight is WWWT.
- Indexes combine traits into a single ranking value to describe an animal's suitability for a given production system.

How to interpret ASBVs

Rams with a more positive ASBV for weight (WT) will produce lambs that grow faster and therefore reach target weights in a shorter period of time.

Rams with lower fibre diameter (FD) ASBVs will produce progeny that have finer wool. A ram that has an ASBV of $-2.0\mu\text{m}$ will produce progeny that are 0.5 microns finer than a ram with an ASBV of $-1.0\mu\text{m}$.

Rams with a higher weaning rate (WR) will produce daughters who wean more lambs per ewe joined. A ram with a WR of 0.2 will produce daughters who wean 0.05 more lambs per ewe joined than a ram with an ASBV of 0.1.

Rams with a positive ASBV for fat (FAT) will produce lambs that are fatter, at the same weight. This ram will produce lambs that are on average 0.5mm fatter at the GR site when compared with an ASBV of 0mm.

Rams with a positive ASBV for Staple Length (SL) will produce progeny with longer fibre length. A ram with ASBV of 20mm will produce progeny with 5mm longer wool compared to a ram with an ASBV of 10mm.

Rams with a more negative worm egg count (WEC) ASBV will produce progeny that are more resistant to worm burdens. A ram with a WEC ASBV of -40% will produce progeny that have 10% less worms compared to a ram with an ASBV of -20% .

WT (kg)	EMD(mm)	FAT (mm)	CFW (%)	FD (μm)	FDCV(%)	SL(mm)	WR	FR	WEC (%)	INDEX
9.5	1	1	24	-2.0	-1.0	20	0.2	-0.6	-40	163
ACC. 70	ACC. 65	ACC. 63	ACC. 69	ACC. 70	ACC. 70	ACC. 63	ACC. 69	ACC. 70	ACC. 70	ACC. 65

Rams with a more positive ASBV for eye muscle depth (EMD) produce lambs that have more muscle. A ram with an ASBV of 1mm will breed lambs with 0.5mm more eye muscle than a ram with an ASBV of 0mm.

Rams with a more negative ASBV for Fibre Diameter Coefficient of Variation (FDCV) will produce progeny with lower variation in fibre diameter, therefore a lower ASBV tends to be more desirable. A ram with an FDCV of -1 will produce lambs that have 0.5 % less variation in micron than a ram with an ASBV of 0.

Rams with a more negative ASBV for footrot (FR) will produce lambs that are less susceptible to footrot therefore a lower ASBV tends to be more desirable. A ram with an FR of -0.6 will produce progeny that have 0.3 score less footrot than a ram with an ASBV of 0.

Rams with a higher clean fleece weight (CFW) will produce progeny that cut more wool. A ram with an ASBV of 24% will produce progeny that cut 4% more wool than the progeny of a ram with an ASBV of 16%.

A selection index is an important tool to drive genetic improvement when there are a range of traits of economic or functional importance. Rams with higher indexes will produce lambs that are more suited to a particular production system.

ESTIMATED BREEDING VALUES (EBV'S) EXPLAINED

EBV'S	ACRONYMN	UNITS	WHAT IT MEANS FOR YOU
POST-WEANING WEIGHT	PWT	KG	GROWTH RATE TO 200 DAYS OF AGE

Who is FMG?

FMG is New Zealand's number one rural risk advice and insurance specialist. We have been involved with rural New Zealand for over 100 years and we remain 100% committed to our clients.

FMG's Instant Livestock Cover

FMG Instant Livestock Cover provides short term, non-renewing cover for your specified animal(s) for death or infertility as a result of accident, disease or illness.

Your animal's age and value

Any animals covered under this policy must be certified 'fit for purpose', in sound health and to qualify for automatic underwriting, be purchased for less than \$25,000 each.

Animal: Bull, ram and cow/heifer

Age Limit: Between 6 months and 5 years

Animal: Stag

Age Limit: Between 3 months and 12 years

During the period of insurance, the specified animal is covered for

- Theft.
- Death caused by an accident, disease or illness.
- Infertility—intentional slaughter because the animal becomes infertile through accident, disease or illness, and provided that the animal has been infertile for more than 90 days, or the vet has certified that the animal is permanently infertile. Please note this cover is not available for cows/heifers.

You are automatically covered for

- Up to \$500 for the reasonable vet fees you incur for treatment of injury or treatment administered to prevent the death of your specified animal, whether or not death occurred.
- Up to \$2,500 for the reasonable cost you incur to remove the carcass of the specified animal following a fire.

You also have the optional cover for

- Your specified stags to be covered for accidental death as a direct result of hard antler or velvet removal.

Period of cover options

- 30 days.
- Up to 3 months.
- Between 3-6 months.
- Between 6-12 months.

You can also insure your livestock on an ongoing basis under our separate Livestock policy.

What we will pay

- Fair market value of your specified animal, less any amount you receive for the sale of the carcass, up to the amount shown on the Insurance certificate.

Disclaimer

Please note this is only a summary of the product and is subject to our specific product documentation. For full details, you should refer to the policy document. You can get these documents, and any other information you need, from your local FMG representative, by calling us on 0800 366 466 or by visiting our website www.fmg.co.nz
