Big Lou's Donuts

Please see the below information from the supplier regarding defrosting and storage for Big Lou's Donuts.

Preferably Defrost in original sealed packaging or in a suitable closed container. Defrost on average is approx 30 mins. Up to 1 hour in cooler conditions. Do not refrigerate. Store Donuts either Frozen in sealed container or Ambient Conditions. Once thawed use within 2-3 days. Ideally turn over daily.

Donuts are best displayed in smaller displays such as glass or acrylic cake dome at ambient temps. The more oxygen the donut is exposed to the sooner it will dry out. Large open display cabinets are ok but will dry Quicker than a small cake dome. Excessive Humidity can cause iced donuts to melt/run. Keep away from heat sources such as fridge/freezers, Bain marries and other equipment that generate heat.
