To Main Controller

TCP/IP

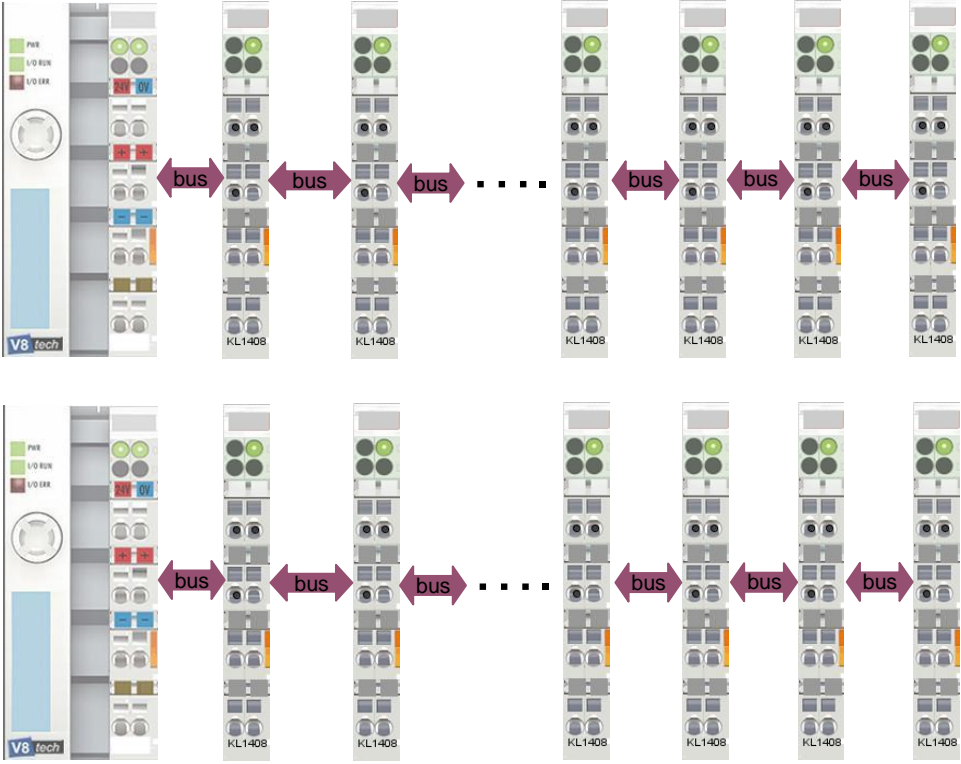

Managing Server

LAN

TCP/IP

TCP/IP

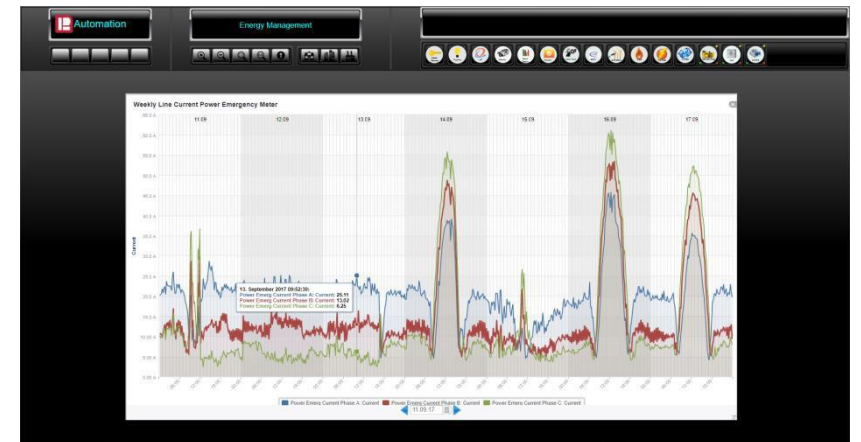

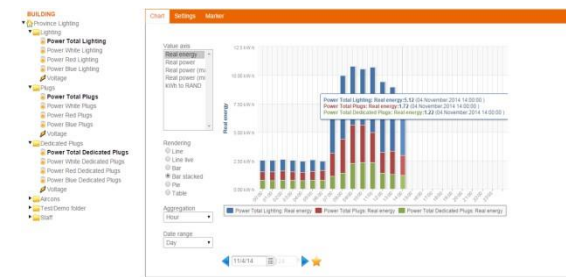

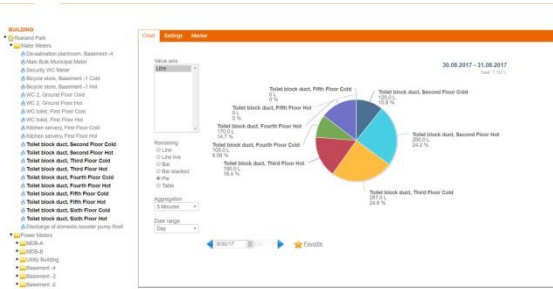

System Manager - Advantages

- Based on IT – Standards (Java, XML, TCP/IP)
- Performant and resource saving code
- Device independent
- Scalable (adaptable to each building size)
- Connects different worlds (housing technology, consumer electronics, informatics, telecommunication, ...)
- Updatable and remote adaptable
- All important functions (timer, logic blocks, sequences, visualisations) integrated by default
- Open interfaces to connect 3rd party products/protocols
- Multiple System Integrators can commission simultaneously

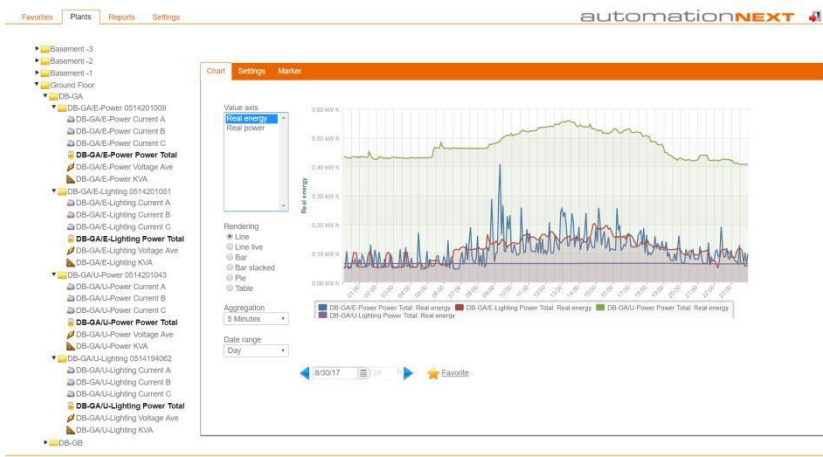

Building Maintenance and Reporting

- Via our software we can provide you with the ultimate solution
- Power consumption
- Status reports
- Reports can be made automatically via email to the administrator
- Assignment of new requirements, remote or local
- Other devices monitoring
- Other Systems reports and monitoring
- Staff monitoring
- Access control
- Lamp failures
- Lamp life monitoring
- Ethernet real time monitoring of events

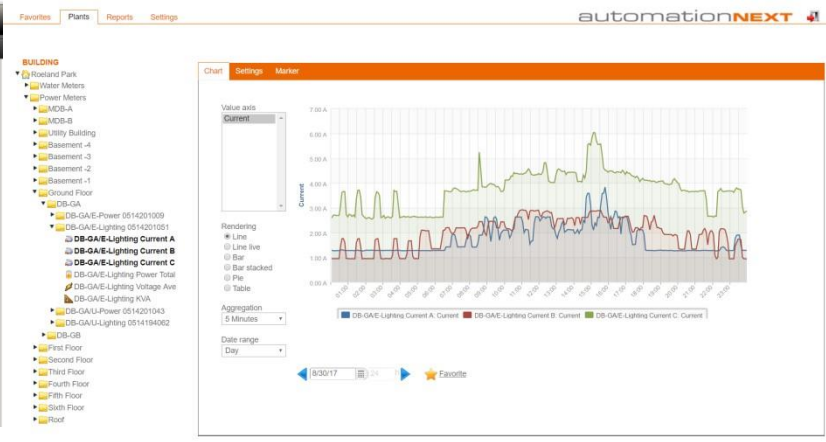

Now you can....

- Effectively monitor
- Orchestrate
- Automate and optimise the operation of all the systems in your building to reduce energy use and costs.
- Analyze and aggregate loads
- Benchmark facilities and determine how building characteristics such as size, equipment type, schedules and climate correlate with energy.

This screenshot displays the 'Generator A' dashboard. It features a central 'e' logo and a 'Back to Main Menu' button. The dashboard includes several gauges and status indicators: 'Engine Speed' (1794 x 10), 'Fuel Level' (27.2 V), 'Generator Voltage' (L1: 0.0 V, L2: 0.0 V, L3: 0.0 V), 'Generator Current' (PH1: 0.0 A, PH2: 0.0 A, PH3: 0.0 A), 'Common Alarm', 'Fuel Relay', 'Low Battery Voltage', 'Frequency' (47.0), 'Generator Ready', 'Generator Available', 'Charge Alternator Failure', 'Engine Temperature', 'High Coolant Temperature Warning', 'Low Fuel Level', 'Fail to Start', 'Oil Pressure Kpa', 'Low Oil Pressure Warning', 'High Voltage Warning', and 'Engine over-speed warning'.

Real Time Control

- Unfavourable peaks are avoided with alarming and automated load shedding activities.
- With day-ahead or real-time pricing signals introduced, you can make strategic production decisions based on economic conditions.
