

Boss Camp Light Troubleshooter

Thank you for purchasing the all new Boss Camp Light.....the perfect addition to your camping set up.

Follow these simple steps to ensure trouble free operation:

1. Ensure the connector between the light head and the RF (Radio Frequency) module is pushed in all the way and the locking ring screwed up.

2. Remove the battery protection tab from the Remote Control. If the battery is accidentally removed, ensure it is replaced negative side facing up towards buttons on controller. Reset the Remote according to the instruction leaflet. Reset the Remote if it is taken out of range and stops working.

3. a) ANDROID USERS: Scan the QR Code on the RF Module (or instruction sheet) to download the FishLight app. Once the app has downloaded, click INSTALL. The FishLight icon will appear in the App section.

b) I-PHONE USERS: Go to the App Store and search “fishlight app” (include the space). Download and install. The FishLight icon will appear in the App section.

Plug the light into a 12V socket, or connect directly to power source using the crocodile clips. Turn on and ensure all functions are working using the Remote Controller. Open the FishLight app. Press the settings button (gear shaped icon at bottom left) to initiate Bluetooth scan.

4. Select RF-02 and press the grey box at the right. This will connect your phone to the light via Bluetooth. You can now control the functions from the phone app.
