

ENDURISTAN

LONG LIVE THE ZIPPER!

The zipper on this Enduristan product is incredibly tough and waterproof. To make sure it keeps working perfectly, please follow these simple care instructions:

Before using the zipper, lubricate it with a small amount of zipper lubricant. To do so, rub a small amount of lubricant across the teeth of the zipper. Then open and close the zipper a few times for even distribution.

Zippers hate dust and sand. Rinse them with water every now and then. Use soap if required. As a rule of thumb: Whenever your face is dusty after a day of off-road riding, your zippers are dusty too. **We do not mind, if you don't wash your face, but please rinse the zippers!**

If the zipper gets stuck, don't force it! Just find out what's in the way and remove it.

If the zipper begins to get harder to close, just clean it and lubricate.
