

The only intermittent catheter to offer
touch-free insertion and maximum control,
without sacrificing comfort.

Magic³[®]

HYDROPHILIC INTERMITTENT CATHETER

*Now available in straight
and Coudé tip*

BARD | **CARE**

Care. Comfort. Choice.

Designed using a unique composite of three distinct all-silicone layers, combined with a gripping device, the MAGIC³® Intermittent Catheter with SURE-GRIP™ Sleeve is more than just comfortable – it's easy to handle and eliminates the need to touch the catheter surface.

The Catheter

m³ Technology

MAGIC³® Catheter with m³ technology is the first intermittent catheter made of three all-silicone layers – and the first that demands no compromises.

Environmentally Conscious Design

Its 100% silicone design is not only soft and designed to be gentle on delicate urethral tissue; but is not made from natural rubber latex and is phthalate-free, eliminating the risk of latex-related allergic reactions and disposal concerns.

The SURE-GRIP™ Sleeve

Control at the tip of the catheter

Firmly grasps the slippery surface and slides smoothly along the catheter shaft making it easier to maneuver giving the user more control while catheterizing.

No-Touch Insertion Technique

Allows the catheter to be held firmly without touching the surface, minimizing the risk of contamination.
