LETTER FROM THE PRESIDENT

In our 95th year, Delma continues to thrive as a family-owned Swiss watchmaker with a captivating collection of watches. From classic timepieces with a contemporary feel to robust sports watches that withstand the rigors of the ocean, Delma produces watches that perform.

It is my pleasure to present you with our 2019 - 2020 catalogue. Each model is attentively designed and carefully created by our watchmakers and engineers. In 2019, Delma celebrates the core design strengths that take us back to our roots as one of the foremost architects of professional divers' watches by introducing two new models for both specialized and recreational divers.

The Blue Shark III, designed for extreme underwater adventures, now goes deeper than ever with an enhanced reach of 4000 meters (13120 ft.). For divers in pursuit of sheer recreation and fun, we also designed the Delma Cayman, a more

laid-back and luxurious diver model that demonstrates our talents in combining functional excellence with classic design. As always, Delma continued to explore and benefit from key design partnerships in 2018. A new collaboration with a Brazil-based wreck diving documentary team brought us new ideas and put our divers' watches to the test. Our ongoing partnership with ocean adventurer Nick Moloney keeps us abreast of technical developments and new challenges faced by sailing professionals around the world. These and other valuable collaborations continue to prove the extreme seaworthiness of the Delma Racing and Diving

collections. It is only through continuous learning and an intense focus on improving our watch designs that we are able to delight both casual watch wearers and professional sportsmen and women year after year. We thank you for accompanying us on our exciting watchmaking journey, and hope you continue to value and enjoy your Delma timepieces year after year.

Fred Leibundgut
Chairman & CEO Delma Watch Ltd.

HISTORY OF DELMA

What follows is the exciting story of a family-owned watch manufacturer that has prevailed in the Swiss watch industry for nearly a century. Our history inspires us and fuels our future innovation. Our achievements and core values continue to guide us on our way through the 21st century.

The 1920s represented a paramount era for the Swiss watchmaking industry. A new type of watch continually rose in importance: the wristwatch. Until then, men were only seen carrying pocket watches, but with the advent of the first airplanes and cars, the wristwatch rose in significance because of its practicality. It was a time in which many watch brands had

to change their production completely. The brothers Adolf and Albert Gilomen saw this as the ideal moment to enter the industry, so in 1924, they founded their own watch company in Lengnau. As was a custom adopted by many other brands, they strategically registered four brand names: Thuya, Midland, Delma, and Gil. In some cases, previously reg-

istered names were later used for watch families, such as the Midland model, which was the Gilomen company's first chronograph. Delma would eventually be established as the company's name. Early production efforts focused on delivering precise, robust timepieces of great elegance. Lengnau was ideally situated in the heart of the Swiss watch region. The proximity of a nearby watchmaking school ensured a pipeline of well-trained personnel. Equally, the region contained a well-established network of independent furnishers that guaranteed the supply of all necessary components. One of them, the Landeron movement manufacturer, had a first-class reputation for its chronograph movements. In the forties, Delma launched an elegant yet sturdy chronograph based on this movement. This inaugural watch is often considered the starting point for Delma's dedication to sports watches.

After establishing a strong foundation in the hands of the Gilomen family, the company changed ownership and in 1966 was renamed Delma Watch Ltd. following the takeover by Ulrich Wüthrich and a partner. In 1996 the business was passed down to Ulrich's son in law Fred Leibundgut. Today, Delma is still family-owned and his son Andreas Leibundgut serves as Head of Marketing. As one of the last independent Swiss watch manufacturers, we feel more committed than ever to the tradition of superior watchmaking and are proud to focus on consistently delivering quality timepieces for generations to come.

1924

The foundation

In 1924, the brothers Adolf and Albert Gilomen founded A. & A. Gilomen S.A. in Lengnau near Grenchen, Switzerland. In 1966, the company was renamed Delma Watch Ltd. after one of the initial four model names following the takeover by Ulrich Wüthrich & partner.

1946

First Chronograph

The Delma insignia first appeared on pocket and wristwatches in 1933, followed by the first chronograph in 1946. Recorded under the name Midland, the classic 18-karat yellow gold chronograph equipped with a mechanical hand-winding movement signifies the beginning of Delma's sports watch collection.

1954

A true racing machine

A sporty chronograph with a stainless-steel case is released, boasting an ETA Valjoux 7736 R movement. The Tachymeter indication on the dial, the luminous hands and genuine leather or rubber strap made it the ultimate racing timepiece.

NINETY-FIVE YEARS OF TRADITION

Delma has been passionate about building watches for almost a century. Since the very beginning, we are committed to delivering stylish and sturdy timepieces for refined sports and leisure pursuits. This catalogue is designed to showcase our ongoing tradition of crafting pioneering and timeless watches that embrace our history and achievements with an innovative edge.

When the Gilomen brothers embarked on the challenge of founding a watch company in their hometown of Lengnau, Switzerland in 1924, the region had just begun to proliferate with watch manu-

facturers. This area between Grenchen and Biel would later set standards for the Swiss watchmaking industry and represent an unmatched global quality. The wristwatch had just emerged, and

thus the direction of its future development was wide open. One thing was certain, however. The brothers wanted to be at the forefront of progress and were wholly committed to creating timepieces

that performed with style. In keeping with their entrepreneurial and innovative spirit, the company promptly created their first chronograph wristwatch in the forties when an advanced chronograph

1969

The first automatic divers' watches

The Periscope was Delma's first wristwatch with increased water resistance. Although not yet up to present-day standards, this model started Delma's divers' watch tradition.

1975

Professional divers' watches

As of 1975, the company was enjoying great success with its two professional divers' watches: the Shell Star and Quattro. Delma's stainless steel automatic models with rotatable bezels remain popular with professional and hobby divers to this day.

1981

The launch of the Shark

Named for its precision and sharp design elements, Delma's Shark model had a rectangular stainless steel case encompassing an automatic ETA 2789 movement. The intricate bracelet, unique octagonal dial and diamond cut indexes made this unique watch worthy of admiration.

1988

Delma Moonphase pocket watch

When pocket watches came back in style for a brief period along with the three-piece suit, Delma used the opportunity to produce a prestigious Savonette example in 18-karat gold. Behind the carved spring lid is a refined hand winding Unitas movement with pearled bridges, moon phase and date indication.

1991

The Klondike collection

The Delma Klondike was launched in 1991 as an annual limited-edition mechanical gold and platinum collection and has served as Delma's signature line ever since. It was recognized for its exceptional quality and ingenuity by its preselection in the Calendar category at the Grand Prix d'Horlogerie de Genève in 2017

1995

The Delma Platinum collection

In the mid-nineties Delma enjoyed great success with its Platinum collection including winning the 1st prize in the precious metal category at the JA International Jewelry Show in New York.

2004

The steel Klondike

As an extension of Delma's successful signature line, the Klondike was redesigned in stainless steel in 2004. Equipped with a new movement, its refreshed forms and materials made it a noteworthy timepiece among Delma's sports watches.

2011

Blue Shark I

The Blue Shark joins the ranks of Delma's exceptional divers' watches with a splash. Flaunting a sporty, sturdy disposition and eye on innovation, the original Blue Shark was introduced as a progressive performance divers' watch with water resistance to 3000 m / 9900 ft that encompassed the latest advancements in functionality and strength.

2014

The Midland Chronograph

A new sports watch, carrying the name of the company's first chronograph is introduced. While it pays tribute to the original, the bold look with exposed screws is undoubtedly fresh. Equipped with a big date and ergonomic push pieces, the Midland Chronograph is a revered companion for aspiring and professional athletes.

movement was realized. The sporty and elegant piece set a precedent for quality and creativity, thereby solidifying the brand's mission. The fifties and sixties marked the beginning of extensive underwater exploration, and it was clear that developing a quality divers' watch was imperative. In 1969, the Periscope, Delma's first timepiece with enhanced water resistance, was born. The sea has been Delma's companion ever since and a few years later in 1975, Delma issued its

first professional divers' watch, the Shell Star. The power of water has continuously motivated us to devise watches with the potential to go further and dive deeper. The integration of new technologies such as the helium valve on the first Blue Shark in 2011 and the screw down crown on all our divers' watches exemplify how Delma's strength is augmenting constantly. Our watches are enjoyed and relied upon equally beneath and atop the water. Partnerships like those with the IMOCA

Ocean Masters, our brand ambassador and sailing champion Nick Moloney, and the Brazil based Naufragios diving team enable us to continually put our watches to the test and ensure persistent quality and enlightened evolution.

2016

Relaunch of the Shell Star

The revival of Delma's first professional divers' watch marked an exciting moment. Technological advancements allowed us to produce a new Shell Star that kept the distinctive sporty look of the company's landmark model with features that were unimaginable in the 1970s. Now equipped with a helium valve and water-resistance to 500 m, the Shell Star is a modern precision instrument.

2017

The racing collection expands

The introduction of the Oceanmaster series stimulated Delma's Time to Perform campaign and solidified the company's companionship with extreme sailing. The collection is inspired by Delma's collaboration with the IMOCA Ocean Masters and has special features for nautical navigation and tactical planning.

2019

Launch of the Blue Shark III

Delma's Blue Shark models have continuously exceeded perceived boundaries of endurance and the Blue Shark III is no exception. Standing out as one of the strongest divers' watches ever produced, the new Blue Shark III is Delma's supreme divers' watch with water resistance to 4000 m / 13120 ft. As the series grows, and new technology is introduced, the Sharks become increasingly powerful, resilient, and groundbreaking.

COMPETENCE AND PHILOSOPHY

As a family enterprise, we consider quality across all our products and the commitment of our staff to be the core elements of our legacy and our future. Our tenacious dedication has enabled us to present watches of genuine quality and precision for over ninetyfive-years without interruption, and to continue to deliver innovative, Swiss Made timepieces.

Delma's hometown, of Lengnau, located near Bienne, lies at the core of the Swiss watchmaking region, which stretches from Geneva in the southwest to Basel in the northeast in the Jura Mountains. Huguenot watchmakers and goldsmiths from France settled in this region in the 16th century, bringing their skills to Switzerland. Grenchen, at a distance of only one kilometer, is home to the only German-speaking watchmaking school in Switzerland. All of our highly qualified watchmakers hold a degree from this fine institution.

Our watches are designed by specialists with extensive know-how in the field. The life of every Delma watch starts as a sketch, drawn by the able hands of an artist. The first ideas are then consolidated by transfer into a 3D program that delivers a realistic visualization of

the future timepiece. Rapid prototyping enables us to experience the touch and feel of every new model as it develops. Once the design has been approved, production starts for our watchcases, which are crafted to the highest standards in quality stainless steel. Each watch is individually assembled in our workshops by one skilled watchmaker with utmost concentration.

All watch components are checked before assembly. First, the dial is paired with its movement. Next, the extremely fine hands are placed on the axles protruding through the dial. Finally, the completed movement is fitted into the watchcase, the crown is fixed and the case back is carefully closed. All watches are then tested by a separate team of watchmakers. Thus, we guarantee a strict separation of production and quality con-

trol, making sure that every single watch that leaves our manufacture is checked at least twice. These tests take into account not only the rate of the watch, but also its water resistance and an inspection for flaws that can only be seen with a loupe. The reliability of our products has always been of equal importance to us as our responsibility towards our staff. Through our determined quest towards progress and perfection, our products have always been dynamic and innovative. We have been at the forefront of the evolution of the wristwatch, constantly implementing new functionalities, designs and materials to our productions. To ensure that we stay up-to-date with the latest developments in the industry, our skilled personnel undergo continuous and rigorous training. For the components that we do not produce ourselves, we rely only on the

best suppliers. Our watches, especially our professional divers' watches, have all been carefully conceived to serve you, our valued customer, for a lifetime of wear and enjoyment. We don't believe in ornamentation for its own sake. Our watches are designed in-house to be instruments that are fit for everyday use and designed to withstand extreme conditions.

Our partnerships with true ocean adventurers support our quest to design sailing and diving watches that deliver an optimal combination of attractiveness, performance and reliability. Delma consistently incorporates feedback gained from our professional sailing and diving partnerships into our design plans for future Delma sports watches.

TECHNICAL STANDARDS

The Swiss Made label on our watches stands for the long tradition of quality watchmaking of which we are so very proud. We dedicate ourselves to further strengthening the reputation of this renowned label by only using the best materials and employing the most skilled craftsmen.

At Delma, we believe that the highest goal a company can have is customer delight. For this reason, we always seek to achieve the best possible design outcomes. All of our watches are assembled in our workshops to guarantee that they fulfill the strict Swiss Made labeling requirements. We utilize only the best materials available. Thus, the crystals of our watches are comprised of transparent sapphire, a substance almost as hard as diamond. For our stainless-steel watches, we employ grade 316L steel, which offers a high resistance to scratches and cor-

rosion. Our black models are coated with physical vapor deposition, a specialized method which yields an absolutely even surface. On the Shell Star Black Tag, we have applied a black diamond-like carbon coating, which is almost as hard as diamond for ultimate imperviousness. Our divers' watches exceed the standard ISO 6425 for professional divers' watches. They are equipped with a screw-down crown a screwed back to guarantee long-term resistance to water and humidity. A unidirectional bezel ensures that de-

compression times can never be too short when diving. Some of our divers' watches come equipped with a helium valve to protect them from damage from internal pressure. Due to its exceptionally small atoms, helium can accumulate inside a watch when it is worn in diver bells over a certain amount of time. When resurfacing, the valve allows the gas to escape, gently protecting the watch from excess pressure and damage. All our movements come from the most reliable Swiss partners. Guaranteed leaders in their fields, these manufacturers boast a long history of design and production. As a mechanical

movement is a beautiful piece of engineering, you can observe its intricate workings through a transparent case back on most of our watches. Witness the pulsating balance wheel, as well as the movements of the oscillating mass, in our automatic watches that winds the watch with each arm gesture. All our mechanical movements are decorated to our specifications to give it the unmistakable and highly desired Delma look.

IMOCA OCEAN MASTERS PARTNERSHIP

To test and prove the superior quality of our sports watches, Delma teamed up with one of the toughest sailing races in the world, the IMOCA Ocean Masters Transat New York to Vendée Race. We are enormously proud to be the Official Timekeeper of this highly competitive event.

Today's sailboats have very little in common with the wooden boats of bygone days. Sailing has become an adventure from both a human and technological standpoint. What will always remain is the connection between man, his boat and the forces of nature that cannot be tamed. Exact timekeeping is as crucial to navigation now as always. If all electronic instruments fail, the experienced sailor can still determine his position on the ocean by observing the stars and using a

precise watch, a sextant and a star chart. When it comes to materials, today's boats have taken feasibility to the extreme. Hulls are made of ultra-light carbon fiber, whereas sails resemble wings that pull the boat forward through gusting waves. To gain stability and reduce weight, the latest designs integrate high-tech fibers like carbon and Kevlar. The most recent findings in aerodynamics have resulted in increasingly performing hulls that make these boats faster than anything built be-

fore them. The attributes of professionalism, advanced technology, new materials, speed and precision apply to sailing as well as to our products. It is therefore a great honor to have been chosen as the Official Timekeeper of the Transat New York to Vendée Race. The Delma team was closely involved in this adventurous crossing of the Atlantic from New York City to Vendée on the French Atlantic

coast. Discussions with the skippers taught us what to incorporate into our professional nautical watches, delivering an incredible source of ideas and inspiration. Our watches are now equipped with a multi-functional turning bezel that helps each skipper perfectly time the moment his boat crosses the starting line.

NICK MOLONEY PARTNERSHIP

No one puts Delma watches to the test like sailing champion Nick Moloney, a true ocean adventurer who routinely sets world sailing records. Nick relies on his Delma watches to keep him on target and to propel his life forward during his many daring activities, adventures and accomplishments.

Never one to let a big goal go unchallenged, Nick has established 15 world sailing records and circumnavigated the globe 3 times in the Volvo Ocean Race, the Trophée Jules Verne, and the Vendée Globe throughout his 30-year sailing career. Nick's tenacious spirit and desire to challenge time and circumstances repeatedly to redefine the meaning of excellence parallels the design philosophy of Delma so closely that Nick became Delma's impassioned brand ambassador in 2017. Nick's meaning of time is intrinsically interwoven with his companion watches – the Delma Oceanmaster for extreme ocean adventures, the Delma Shell Star for free diving, and the Delma Rialto dress watch for daily wear. Nick admires and trusts his Delma timepieces implicitly, declaring, "My relationship to my Delma timepieces represents the single most important point of reference in my everyday life. I live in a world that

brand ambassador, Nick's legacy-building exploits will continue to serve as a deep source of inspiration to help shape developing trends and new design elements in future Delma sports watch collections.

is completely reliant on trusted points of reference and the absolute best use of time". This philosophy characterizes everything that Nick does – from pursuing new world sailing records to accomplishing great things in his varied business and philanthropic ventures. Delma will accompany Nick in mind, body and spirit on his ongoing ocean adventures and bold attempts to break world records. According to Nick, "The real race within life is your best use of time. Time defines who you are and how you have lived ... it defines your lasting legacy". As Delma's

NAUFRAGIOS PARTNERSHIP - DOCUMENTING UNCHARTED WRECKS

Experts operating in profound and intense wreck diving environments depend on their instruments to be reliable in the most extreme circumstances. In 2018 Delma partnered with the Brazil based Macadamia Naufragios dive team in pursuit of exploring historic wrecks along the US Coastline. Delma's world class divers' watches performed in tandem with the team and facilitated the creation of an exciting documentary series.

Every serious diver knows, his or her divers' watch performs the most integral function behind a dive. From timing stages of the dive to gauging the depths of the unknown, divers must be equipped with all of the tools required for success, and sometimes even survival, at extreme depths and in confined spaces. Due to the advanced features and striking design of Delma's divers' watches, executive producer and lead diver Marcelo Guimaraes chose three models to ac-

company him and the other divers on their adventures. Marcelo stated that Delma watches equipped them with a "highly reliable way to plan and monitor our team's numerous complex dives and intricate filming activities." The show, released in late 2018, tells the story of three experienced divers who traveled the world in search of the most fascinating historic wrecks. Our partnership with Naufragios, which means shipwreck in Portuguese, proves

that Delma's divers' watches deliver extreme water resistance at almost limitless depths. Other key features appreciated by the diving team include extra scratch resistance for cave and wreck dives, sturdy unidirectional bezels, and extreme legibility in even the darkest conditions.

Delma's partnership with the Naufragios team and key collaborations with other professional divers around the

world, along with rigorous product testing, serve as an integral part of Delma's next-generation design strategy. In 2019, the new Blue Shark III and the Cayman models will join the established ranks of other Delma's divers' watches like the Blue Shark II, Santiago and Shell Star, the three models that accompanied the Naufragios team on their latest thrilling underwater quests.

RACING COLLECTION

KLONDIKE

This signature collection combines Delma's mastery in design and complicated movements to create an exquisite timepiece. Our flagship model, the Klondike Moonphase, features a day-and-night indication on which a star-spangled night sky is offset by a radiant depiction of the golden sun. This representation is applied on a rotating disc indicating the 24-hour rhythm of day and night. The romantic moon phase indicator beneath the chronograph's hour counter and the pointer date hand are among its other unique elements.

OCEANMASTER

Created in collaboration with the world's best offshore sailors, the Oceanmaster collection combines Delma's expertise in watch-making with their knowledge of navigation in the open sea. This collection is the result of our partnership with the IMOCA Ocean Masters as the Official Timekeeper of the Transat New York to Vendée Race. Each of these watches features the robustness of a true divers' watch in combination with key navigation features for skippers, including a nautical bezel and a tactical planner to time and position the crossing of the starting line.

DIVER COLLECTION

BLUE SHARK III

Delma's divers' watches reach exceptional depths in 2019 with the new Delma Blue Shark III – with extreme water-resistance to 4000 m / 13120 ft. The sturdy unidirectional bezel and helium valve ensure that it is primed for even the most critical demands of professional divers. Enhanced crown protection and luminous markers enable divers to explore uncharted territory with confidence in all lighting conditions. An exchangeable rubber strap with bespoke tools makes the watch easily modifiable for adventures on land or underwater. This superb limited-edition diving instrument arrives inside a special Blue Shark box in anticipation of its first extreme underwater excursion.

SHELL STAR

One look at this watch, and you know it's tough. The crown protection, the brushed stainless steel case and the helium valve among other enduring features make the Shell Star a tool for professionals. The tradition of the Shell Star goes back to 1975, when Delma's first professional divers' watch launched under this name. This iconic model became a landmark for the company, serving as a model for many other divers' watches. In 2018, Delma enhanced the Shell Star collection with the introduction of a DLC-coated limited edition Black Tag model inspired by the world's best free divers.

PERISCOPE

The Periscope's namesake from 1969 is the pioneer of Delma's submariner tradition as the company's first timepiece designed for underwater diving. Present-day models have advanced technical features which give them the dexterity to perform as professional diving instruments that exceed contemporary standards. The unidirectional bezel crowned by a luminous circular indicator allows for precise timing of decompression phases while the substantial indexes and striking dial varieties aid effortless performance up to 500 m / 1650 ft.

CAYMAN

The new Cayman looks back to vintage Delma divers' watches introduced in the 70s. The intricate details and bright finishes are inspired by the bountiful landscape and revered animals of the Caribbean. Capitalizing on Delma's long experience designing and producing divers' watches, the Cayman brings ease of use and reliability to the occasional diver and lovers of all water sports and leisure activities.

COMMODORE

Many consider the Commodore to be our most elegant divers' watch. With water resistance to 500 m / 1650 ft, unidirectional bezel and large characteristic luminous hands, the Commodore surpasses any divers' expectations in appearance and performance. The classic materials and timeless finishes transition effortlessly into a leisure timepiece. Details such as the magnifying glass accentuating the date window make this watch a precious instrument in the ocean or as an object of admiration at cosmopolitan party.

SANTIAGO

The Santiago, available in an appealing selection of color and material combinations, is Delma's most popular divers' watch due to its classic looks and great features, including water resistance to 500 m / 1650 ft. All mechanical models have a transparent case back showing the intricate movement. For ultimate precision, the Santiago Chronometer is available with an automatic movement certified by the "Contrôle Officiel Suisse des Chronomètres" (COSC).

SEA STAR

The Sea Star possesses the robust nature of a true divers' watch with captivating style. The characteristic fluted bezel, riveted indexes and Roman numerals make an elegant statement while sturdy construction and water resistance up to 200 m / 660 ft mean the Sea Star is prepared for all endeavors. Ladies and gents can choose matching finishes or flaunt their own style with four dial options and two metal finishes.

DRESS COLLECTION

HERITAGE

The Delma Heritage is the classic dress watch that adds a sophisticated flair to attire for any adventure. Reminiscent of Delma's earliest timepieces, features such as the domed sapphire crystal and curved dial revive vintage elements in a modern scale. The refined case accentuated by slim indexes and hands set upon a luxurious sunray-brushed dial incite elegant simplicity. Available in automatic and quartz, the Heritage serves as an instinctive accessory for intellectual and social pursuits.

CORDOBA

The Cordoba is an extra-flat dress watch of exceptional elegance designed to complement any occasion. Wear it at a dinner party or at work, and you'll always have a timepiece that suits the moment. Its lancet-shaped hands are set atop a captivating clou-de-Paris guilloché surrounded by classical Roman numerals and baguette indexes. Other special touches include an elegantly framed date indicator and diamond polished appliqué.

ELEGANCE COLLECTION

RIMINI

The youthful exuberance and sporty appeal of the Delma Rimini make it suited for those who embrace life with passion and tenacity. The Rimini accompanies you as an elegant every-day watch that adds individuality to diverse wardrobe choices and adventures. Reflected by the sunray-brushed dial, the diamond-set bezel contributes an extra boost of light. Its ethereal feel and casual sophistication make the Delma Rimini the perfect all-around watch for both relaxed and elegant occasions.

CANNES

Handcrafted in different tones of mother-of-pearl, particular attention was given to the design of the surprisingly large dial of the Cannes. No two equal discs of this natural treasure exist, thus each and every watch is unique. The small seconds counter at 6 o'clock is encircled by its own indexes which flawlessly offset the guilloché patterned central ellipse. Thoughtfully integrated into the watch case, the articulated bracelet adorns the wrist with grace and simplicity. The brilliant-cut diamond encrusted bezel model is a stunning masterpiece for a truly special occasion or recipient.
