- Aroma diffuser function.
- Big tank cover design for easy cleaning by hand.
- Automatic shut-off protection with warning when waterless.
- Automatic shut-off protection when take off the water tank.
- Optional demineralization cartridge to prolong use life.
- Integrated body design for noise suppression, super quiet when operating.
- Ceramic glass glaze transducer can resist water scale effectively to prolong use life.

# TECHNICAL PARAMETERS

Model: HU5002

Water Tank Capacity: 4.0L

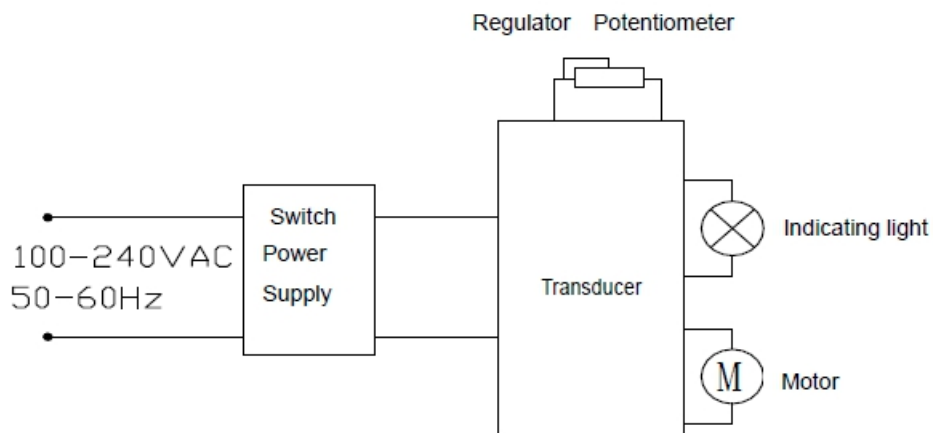

Operating Voltage: AC 100-240V 50/60 Hz

Anti-electric shock Protection: Class II

Rated Max. Moisture Capacity:  $\geq 300\text{ml/h}$

Rated Power: 25 W

## CIRCUIT SCHEMATIC

# TECHNICAL PARAMETERS

## Operation Condition

- Ideal operating environment is at the temperature of 5°C to 40°C and relative humidity is below 90%.
- Keep machine working at low mist mode when room relative humidity is higher than 70% or in an enclosed room space.
- Fill the tank with clean and cool water ONLY. (<40°C)
- Clean water tank and water flume after using for a long time.
- If the humidifier has water filter, please immerse the filter in water for 24 hours for first using.

## Operation Steps

- Lift the water tank. Unscrew the water tank cover and fill the tank with water. Screw back the water tank cover tightly. Put the water tank on the machine base steadily.
- Inspect whether the mist outlet nozzle is put well on the water tank.
- Plug the power cord into a wall socket. Rotate the control knob clockwise to the ON position. BLUE indicator will light up indicating the humidifier has been turned on.
- Keep rotating the control knob clockwise to increase the mist level at needs.
- Indicating light turns RED when the water inside the tank is not enough and the machine stops working.
- Refill the reinstall the water tank. Machines works again.
- Machine will automatically shut off if the water tank is removed while working. Place the water tank on the base, it will continue to work.

# CLEANING & MAINTENANCE

Before cleaning, turn the functional knob point to “ OFF” , take off the plug.

## Transducer

- Water quality in someplace is so hard that the transducer surface will be easy to form water scale. We recommend you to clean transducer with cleaning agent.
- Add little cleaning agent on the transducer surface ( More or less depends on the scale ).
- Infuse water into the sink to soak the sink fully for 10-15 minutes.
- Clean with brush until scale disappear.
- Clean twice with water.

**Note:** Don't clean transducer by any metal or stiffness material or scrape it to avoid any damage.

## Water Tank Inside

- Clean at least twice per week if frequently use the humidifier.
- Use soft cloth wipe it when water tank side has scale.
- There will be some dirt stick to the tank inside wall, which can be cleaned with soft scour. Then clear the scour completely.
- Don't put acid, alkalescency, blencher scour into water tank to avoid damage.

## Water Sink Inside

- Take out the water in sink. Clean the scale by brush, then wipe it by damp cloth.
- Flush it by water.
- Don't pour water directly when cleaning the water sink inside.
- Don't use acid scour to clean the water sink inside to avoid damage to transducer.

## Body and Water Tank Outside

- Wipe it with soft cloth.

## Storage

- Drain out water from the tank and the base, clean the dirt, wipe out water and airing the machine.
- Ensure there is no water in the machine and put it to the carton.
- Store the package in dry place.

# PROBLEM SOLUTION

If the machine does not work appropriately, please check the following causes.

| Problem                           | Possible Causes                               | Solutions  |
|-----------------------------------|---|--|
| No steam                          | Check plug                                    | Plug into socket   |
|                                   | Check power switch                            | Turn on power switch   |
|                                   | No water in tank                              | Add water  |
|                                   | Less water in tank                            | Add water until enough   |
| Peculiar smell steam              | New machine                                   | Take off tank cover, place the water tank in cool and dry place for 12 hours |
|                                   | Dirty water, or water stores for a long time  | Clean water tank, or reill clean water                                       |
| Noise                             | Tank in incorrect position                    | Put the tank in correct position   |
|                                   | Less water in tank                            | Add water  |
|                                   | Uneven level for machine                      | Place it on even flat or ground  |
| Steam out from outlet surrounding | Clearance between steam outlet and water tank | Sink the steam outlet cap in water and use it again                          |

If the possible causes listed above can't solve your problem, please email us for help.

# THE PLACE ENVIRONMENT

## Set it at the firm, flat place

- The humidifier should be placed at horizontal place and keep it steady.

## Keep far away from the heat source

- The humidifier should be far away from the heat source, such as the stoves or fire place. Avoid directly exposing to sunshine.

## Keep far away from the furniture and electronic appliance.

- The output of mist should NOT be sprayed towards to the furniture and electronic appliance, which will result in moisture damage.

# THE PLACE ENVIRONMENT
