INSTALLATION GUIDE

EASY OIL CHANGE

DIFFICULTY LEVEL AND INSTALLATION TIME

DIFFICULTY LEVEL:
MEDIUM

### TIME ESTIMATED:
1H30 TO 1H45

RECOMMENDED TOOLS

- 1/4 RATCHET AND MINI BIT HOLDER RATCHET
- TORX T-25 AND T-30
- 6 MM SOCKET
- T-30 BIT
- DRAIN PAN
- BLOCK SPACER (2X4 WOOD)

PRECISION EFI

1 Remove the right side cover and unscrew the body panel

**2** give some space with a 2x4 wood spacer
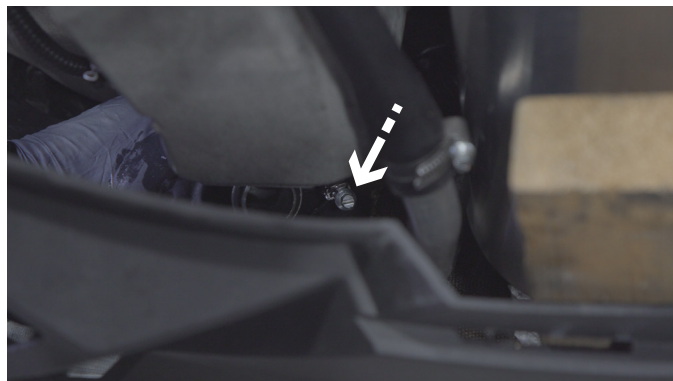

3 Remove the footboard stopper plate

4 Use a drain pan under the footboard, we suggest to raise the front of the snowmobile by at least 40 cm, by using spacers under skis or a chain block, to prevent oil from spreading under the muffler

5 Remove the 2 screws and the metal elbow under the oil tank (a minimum of 3 liters of oil will come out). Absorb the excess oil spilled on the belly pan

6 Loosen the collar and remove the elbow

PRECISION EFI

7 Important to properly install and lubricate the o-ring on the new part

8 install the collar then insert the new part in the hose

9 Install the Easy oil change using the oem screws

**10** Tight the collar installed 3 mm from the beginning of the hose

11 Fill the oil tank to the correct level then check for leaks

12 Install the floorboard stopper plate, make sure it is not damaged or bent (like the image above) and not interfere with your new part

1 For your next oil change, remove the floorboard stopper plate, screw

2 Remove with the same t25 torx , the easy oil change fail safe cap

3 Insert the supplied hose and adapter to unscrew the inner plug by 1 1/4 turn to drain oil

4 once empty, wipe off oil residue and tighten the inner plug by hand and put back the Precision EFI fail safe cap

5 Fill the oil tank to correct level

6 Install the floorboard stopper plate, make sure it is not damaged or bent (like the image above) and not interfere with your easy oil change.
