**The Better Mousetrap**

**Why is “The Better Mousetrap” Better?**

1. Precision spring means no escape! Holds mouse tightly with 30% more force than most other traps – no more sprung traps and stolen bait!

¡El resorte de precisión asegura la captura del roedor! Prensá al ratón con una fuerza 30% mayor que la de la mayoría de las ratoneras. ¡Se acabaron las ratoneras de resortes ordinarias y las camadas robadas!

2. Unique grooved tongue holds bait securely to guarantee a successful catch.

La lengüeta acanalada conserva la carnada para garantizar la captura del roedor.

3. After catch, tongue lifts mouse up and out during “squeeze and eject” disposal.

Al apretar el mecanismo de la ratonera para abrirlo, la lengüeta expulsa al ratón.

---

**Useful Tips:**

- Do not overbait - too much bait will cause premature triggering.

- If after multiple uses your trap won’t stay open, simply remove spring off top two corners of mousetrap and reposition spring by pulling it clockwise around the trap 1/2”, then place spring back on trap.

- If placing traps in rafters or outside, it is best to tie a monofilament line (fishing line) through the base of the trap where the bait pad is slotted. This will secure placement and recover the trap.

- If you need any additional springs or help, please contact us at 800-553-5129.

---

**Press down and hold down while rubbing small amount of bait (peanut butter is best) into grooves. Place in area needed.**

**Position trap (with jaw open), facing the wall, as mice rarely cross open spaces. Examine trap regularly.**

**After mouse is trapped, simply squeeze to dispose of mouse. Tongue of trap actually helps push mouse out.**

---

**Reutilizable**

Rincer a l'eau tiède savonneuse et reset.

**Diseno Higienico**

Manejo seguro e higienico.
