

Intruder The Better Mousetrap™ & The Better Rodentrap™

Useful Tips:

- Do not over bait - too much bait will cause premature triggering.
- If after multiple uses your trap won't stay open, simply remove spring off top two corners of mousetrap or rodentrap and reposition spring by pulling it clockwise around the trap 1/2", then place spring back on trap.
- If placing traps in rafters or outside, it is best to tie a monofilament line (fishing line) through the base of the trap where the bait pad is slotted. This will secure placement and recover the trap.
- If you need any additional springs or help, please contact us at 800-553-5129.
