

OPEN BLUE COBIA

- LIGHT, CLEAN TASTE
- RICH, BUTTERY TEXTURE
- WHITE TO PALE PINK FLESH
- NATURALLY HIGH OIL CONTENT

As a global leader in open ocean aquaculture, Open Blue conducts its operations in synergy with the natural environment, situated far from densely populated coastal waters and fragile ecosystems. The selection of Open Blue sites is meticulously done to prevent the displacement of other marine life, and a designated 2,500-acre protected "no take" zone has been established. This zone exclusively houses Open Blue Cobia and native marine species, including the impressive whale shark.

Open Blue Cobia are raised stress-free, consuming a natural diet that closely replicates what they would eat in their wild habitat.
