Your design(s) must fit within the red rectangle or it will be cut off.

Add your images/designs. Ensure all design elements are embedded and any text is converted to outlines. Image resolution should be a minimum of 300 DPI.

Delete the template layer.

Save the file as a "High Quality Print" PDF, including your name and order number within the file name.

Artwork submitted should be exactly as you would want it to look on the finished product once you have pressed it. Do NOT mirror the design, we will do this at the time of printing.

Remember, white will not print. Anywhere there is white in your design it will show through the product you are pressing it to.

*Copyright images/logos must have written consent.
