

Incorporated in 1888, the Kokomo Opalescent Glass Co. has been making one-of-a-kind sheets of Art Glass throughout its entire history.

## Explanation of Density Codes and Full Batch

The term "density" refers to the amount of light that any given sheet of glass will transmit. The codes listed below may be combined with most opalescent color numbers as shown in the following example:

- 11D** Very dense—Diffuses light.
- 11MD** Medium dense—Limited light transmission.
- 11** Medium—Common density.  
(No density code following color number.)
- 11ML** Medium light—Considerable light transmission.
- 11L** Light—Wispy, translucent opal.
- 11LL** Streaky—A combination of two or more cathedral colors with no opal content.

## **Kokomo Glass Sheet Size:**

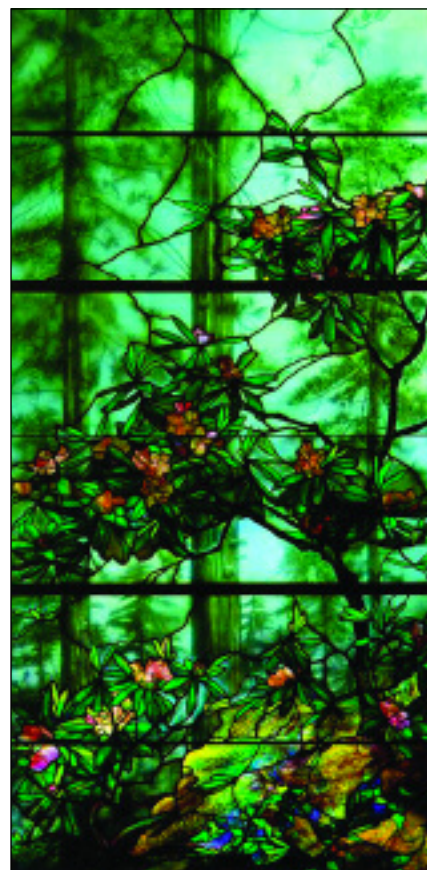

- Sheet Size approx. 32" x 32" or 7.11 sq. ft.
- Granite Catspaw Sheet Size approx. 24" x 40".
- Smooth Catspaw Sheet Size approx. 22" x 36".  
(Smooth Catspaw available by special order only.)

**Sample Box: Catalog No. KOK-SB**

## **Note Regarding Color Accuracy:**

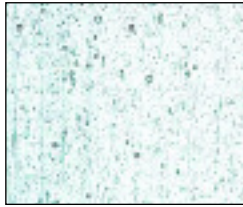

While every effort has been made to present these color images as accurately as possible, there is no substitute for a sample of the actual product. These images are provided as an additional reference and are not intended to replace samples.

\*Color will vary per shipment.

Most colors and textures can be special ordered from the factory. We will promptly quote availability and cost per your request.

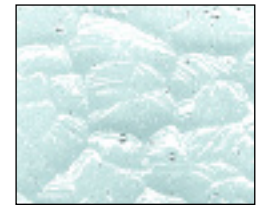

## TIGHT RIPPLE

Like Ripple, Tight Ripple is made by changing the gearing on the rollers so that the glass is gathered into folds while still soft. Possibly the heaviest texture Kokomo manufactures. It is a dramatic treatment to any cathedral or opalescent color.

(Available in all colors - special order only.)
