

STEP 1

Choose the length of the X-Create Bridge System. 13 ft - 33 ft (4 m - 10 m) in 2 ft (0.6 m) increments.

XCB-2M-19

STEP 2

Add module extensions and training modules or leave empty for a dedicated pull-up station.

Customizing an X-Create System is a simple step-by-step process. Determine the length you have available, the storage, training stations and attachments you need, and then the training accessories to pair with it.

Torque's X-Team Design can help you with all of that and give you a 3-D visual rendering of what it will look like in your facility.

STEP 3

Choose attachments. These attach to the base, the boom, the monkey bar crosses or the side of the uprights.
