# WELCOME TO AMERICAN CLASSIC

American Classic is emerging as a bicycle industry leader in the wheel and component design arena. We embrace improvement, fearlessly fusing engineering technology, quality and style into our product line. We are actively shaping the future of the bicycle industry and not sitting still to react to what others do.

Bill Shook, the founder and engineer of American Classic leaves the beaten path to seek new and innovative ways to improve bicycle technology with the single-minded purpose of making bicycle sport enjoyable for all who want to ride and race. We remain true to that chosen path. We strive for excellence and pave the way for a successful tomorrow with big picture creative thinking with you, the cyclist, in mind. Bill started riding at the age of 14. He trained hard and became a champion road and track cyclist, earning a place on the US National Team. While racing, Bill started his design career building his projects in his Dad's garage. In 1974, he created and fabricated the first large tube aluminum bicycle in the world and raced it all

over the country. While racing professionally, Bill strove to find the best equipment, the lightest tires and rims. In the 1970's in the US, fine equipment was hard to find and that is what sparked the idea of American Classic — a place where Bill could design and distribute high performance components for riders every where. After retiring from a successful racing career, Bill received a master's degree in mechanical engineering from Ohio State University. Now he had the engineering expertise and everything was in place for American Classic to become a reality. In 1982, the first products were new concepts, the lightweight water bottle cage and the revolutionary lightweight adjustable seatpost. The rest is history. American Classic now has two facilities including our own testing and quality control center, rim factory and wheel building and assembly plant. American Classic has a broad variety of unique designs in all disciplines including road, track, triathlon, cyclocross, trekking, cross country, all mountain, downhill and handcycling. All this, because Bill couldn't find the right wheels to race in the 70's.

### CELEBRATING THE WHEEL

THE FINE ART OF ENGENEERING

American Classic continues to change the face of cycling componentry to improve your cycling experience. To build something truly different American Classic's engineer, Bill Shook and our technical staff work together through every stage of product development and production. It's a partnership that makes innovation possible and that's exactly how our new products were created.

We have been very busy creating new technology this year. The new line features more tubeless road wheels, including the Hurricane Tubeless wheels either with Rim Brakes or 11 Speed Disc, Victory 30 Tubeless wheels, Argent Tubeless wheels with 11 Speed Disc, a brand new line of AC RD Road Tubeless Rims, Rim Stickers to customize your ride, new carbon road wheels including the Carbon 40 All Carbon Clinchers, Carbon 46 Tubulars with Rim Brakes or 11 Speed Disc and for time trialing, the new Tubular Carbon 3 front wheel and lighter Tubular Carbon TT Disk. For mountain bike, we created the new Wide Lightning Tubeless wheelset 32mm wide, the 11 Speed Disc Hub and more Thru Axle Conversion Kits, Tubeless Tape and Cassette Splines to dial in your wheel spec. Our Collection is the culmination of three decades of research, development and results bringing the world's fastest, most advanced wheels to you.

## **TUBELESS TECHNOLOGY**

THE LEADER IN TUBELESS TECHNOLOGY

AC tubeless wheels take rim technology to the next level. Our mountain bikers are successfully riding and racing tubeless, and now this innovation is available for our AC road riders. Our tubeless wheels are set up with a base layer of AC fiber tape covering the spoke holes and two layers of AC honey colored tape to seal the rim. Next, install tubeless ready clincher tires and pump liquid sealant into the system through our proven AC valves. The liquid sealant replaces the conventional tube

You may ask how our tubeless system works. Bill Shook designed the rim with a bead barb running along the edge of the bead shelf. When installed, the tire firmly pops into position over the bead barb. The tire bead centers and tightly grips the circumference of the rim creating a sealed environment to hold the liquid sealant without burping.

The number one reason to run tubeless wheels is to avoid flat tires. In the event of a puncture, the sealant quickly fills and closes small holes in the tire preventing flats caused by glass, metal and other debris. Pinch flats can not occur as the tube is not part of the system.

Our tubeless system is about speed. It lowers wheel weight at the extreme outer edge of the rim resulting in lower rolling resistance and better performance. In a traditional clincher set up, the tire and tube interface moves as the wheel rolls, creating friction and energy loss. With the AC tubeless set up, there is no frictional energy loss between the tire and tube because the tube is gone. Liquid sealant is lighter than a tube. You can ride lighter weight tires with our tubeless system because you don't have to use tires made with heavy, inflexible puncture layers. Overall, our tubeless system is lighter and the wheel will spin up faster with less rider energy output. And the best part is flat tires are past history.

### THE SPIRIT OF INNOVATION

#### WIDE RIMS IMPROVE CYCLING PERFORMANCE

Everybody is talking about wider rims for both road and mountain bike. What does it really mean for you, the rider? There are a few wide rim profiles on the market but they are either heavy, or too light and flexy. Bill Shook used his mathematical abilities to design our revolutionary wide rims, attaining the goal of being light, stiff, strong, aerodynamic and wide, all in one rim. To start, wide rims mean riding lighter, smaller performance tires with cushiony, high air volume and firm surface grip. Larger width tires offer more air volume but they are heavy with a sluggish ride quality. The desired combined wheel and tire qualities are achieved by stretching out the smaller tire casing on a wide rim and effectively making the tire bigger.

Also, smaller tires on wide rims reduce tire roll on the rims. With a narrow rim and a wide tire, the rim floats from side to side on the tire. Using a wider rim with a smaller tire minimizes float for improved handling, confidence and control. The rim is lower weight at the extreme outer edge of the wheel decreasing rolling resistance and boosting speed. Our wider, lighter rims translate into crisp accelerations, firm ground control, faster rolling on the flats and decisive handling for the extra edge needed by competitive athletes.

## WHAT IS UNIQUE ABOUT SERIES 3 CARBON

#### AMERICAN CLASSIC HAS ENTIRE NEW LINE OF CARBON FIBER WHEELS, ENGINEERED INSIDE AND OUT FOR TOP PERFORMANCE.

Carbon fiber is composed of extremely thin, bonded fiber made of carbon atoms. Thousands of carbon fibers are bundled together into cloth-like sheets. The sheets are combined with plastic resin. The sheets are placed into a mold with the fibers oriented in specific directions to create the desired characteristics of strenath, stiffness or flexibility for the completed rim. Carbon fiber is used in wheels because of the high strength-to-weight ratio, low weight and the ability to mold the sheets into aerodynamic shapes. The subject of intense study in cycling, aerodynamics is the air flow over and around your wheels, bike and body as you ride. The goal of aerodynamics is to reduce the wind resistance called drag on your equipment, so the rider slices through the air and goes faster. At slow speeds, there is smooth air flow called laminar flow. As speed increases, the laminar flow turns to turbulent flow. There is a "sweet spot," the point of reduced drag, when the air begins to tumble over and across the wheel surfaces in turbulent flow. The key to top carbon fiber wheel design is to produce rim shapes that optimize, capture and maintain the aerodynamic sweet spot for each rim depth.

The engineering process on our carbon fiber rims starts from the inside, dictating the direction and lay up of the fibers to form stronger internal spoke beds for structural integrity and stiffness. The outside of each wheel is designed with unique features for aerodynamic performance to achieve the "sweet spot". There is a gentle curved shape down to the spoke bed minimizing drag by bringing the air flow back together without turbulence. Each shape creates air pressure fluctuations causing a ripple effect to induce turbulent air flow to reduce drag at higher speeds. The large, smooth carbon surfaces bring air back together reducing cavitation behind the spokes. The new lightweight Carbon TT Disk is the ultimate in aerodynamics with lenticular skins to sustain the sweet spot for maximized power output.

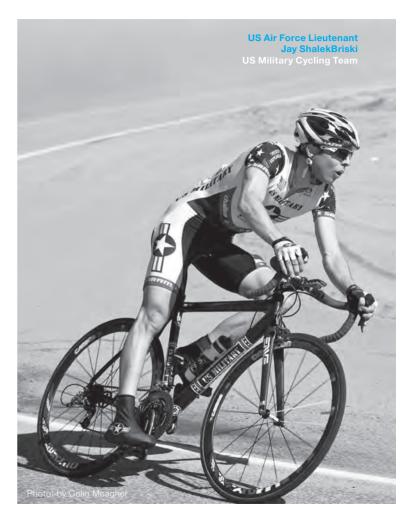

#### **CASSETTE SPLINES**

There are many new cassette spline standards on the market. American Classic offers them all! SHIMANO/SRAM 11 FOR ROAD AND DISC / CAMPAGNOLO 10/11 / SRAM XX1

#### HANDCYCLE BOLT-ON HUB

DISCIPLINE Handcycling WEIGHT 141 gr DRILLING 24h SPACING 100 mm BEARINGS 6803C3 Stainless Steel

The first product in our line of handcycle products, Bill Shook designed a light weight bolt-on hub for improved riding performance. This hub is about a smooth ride, fast accelerations and maintaining speed. The newly designed titanium bolt is a standard  $\frac{1}{2} \times 24$  tpi with internally recessed 10 mm socket head that closes securely and is easy to take on and off with a 10 mm hex key tool. Bolt retracts into the axle for traveling. Large 17 mm axle and stout 17 mm stainless steel bearings. Stiff and strong with big 3.5 mm thick high flanges. Sealed system to keep dirt out of the bearings. Easy maintenance. Slim looking high flange cut outs top off this upgrade to your bike.

### ATB TUBELESS TECHNOLOGY

THE NUMBER ONE REASON TO RUN
TUBELESS WHEELS IS TO AVOID FLAT TIRES.

Our mountain bikers have been successfully riding and racing AC tubeless wheels for the last few years. Bill Shook is taking tubeless rim technology to the next level. Our tubeless wheels are set up with two AC honey colored tape layers to cover the spoke holes. Next, install tubeless ready clincher tires and pump liquid sealant into the system through our proven AC valves. The liquid sealant replaces the conventional tube.

You may ask how our tubeless system works. Bill Shook designed the rim with a bead barb running along the edge of the bead shelf. When installed, the tire firmly pops into position over the bead barb. The tire bead centers and tightly grips the circumference of the rim creating a sealed environment to hold the liquid sealant without burping. The number one reason to run tubeless wheels is to avoid flat tires. The sealant quickly fills and closes small holes in the tire preventing flats caused by rocks, thorns and other trail debris. Pinch flats can not occur because a tube is not needed. Our tubeless system is about speed. It lowers wheel weight at the extreme outer edge of the rim resulting in lower rolling resistance.

In a traditional clincher set up, the tire and tube interface moves as the wheel rolls, creating friction and energy loss. With the AC tubeless set up, there is no frictional energy loss between the tire and tube because the tube is gone. Liquid sealant is lighter than a tube. You can ride lighter weight tires with our tubeless system because you don't have to use tires made with heavy, inflexible puncture layers. Overall, our tubeless system is lighter and the wheel will spin up faster with less rider energy output. And the best part is flat tires are past history.

# THE 27.5 ADVANTAGE

#### MID-SIZED EXCELLENCE ACHIEVED

Whether you call it 650B or 27.5, this mountain bike standard is here to stay. American Classic was a believer from the beginning, now introducing our second generation of 27.5 wheels and rims. Blending the best features of 26" and 29" mountain bikes, the advantages of 27.5 are legion. 27.5 riders tout the 29er big wheel advantages of lower rolling resistance and high speed, better traction, improved roll over characteristics and larger contact patch. Smaller like 26", our 27.5 system is light weight offering quick maneuverability and acceleration, a lower center of gravity and reduced suspension travel limitations. AC new 27.5 line up is mid-sized excellence achieved.

#### MTB RACE 27.5/29 TUBELESS

DISCIPLINE MTB Cross Country RIMS Race Tubeless Aluminum Disc Rims 27.5 350 gr 29 360 gr SPOKES AC Race Round 14/16 Gauge Spokes Black / AC Aluminum Nipples Silver / 32h 3-Cross Front and Rear WEIGHT 27.5 FRONT 662 gr REAR 773 gr PAIR 1435 gr WEIGHT 29 FRONT 670 gr REAR 789 gr PAIR 1459 gr HUBS/SPACING FRONT Disc 130 100 mm / 15 mm Thru Axle Disc 100 mm / 9 mm Thru Axle Disc 100 mm / Lefty Disc 100 mm (29") REAR Disc 225 135 mm / 10 mm x 135 mm Thru Axle Disc / 142 mm Thru Axle Disc / Shimano/ SRAM 9/10/11 or SRAM XX1 BRAKE INTERFACE 6 Bolt International Standard INCLUDED AC Tubeless MTB Tape Installed / AC Tubeless Valves QUICK RELEASE Cromoly QR's UPGRADES Ceramic Bearings / Titanium QR's / Wheel Bag / Thru Axle QR's

# HUBS

THE TECHNOLOGICAL ADVANTAGE

»We design our products down to the smallest details to optimize our product line and improve your enjoyment on the bike. We don't settle for what's available on the market. It is our efforts to make better components that boost the ride quality and reliability of your wheels.«

Bill Shook | President

### **SIX PNNL**

#### CAM ACTUATED ENGAGEMENT SYSTEM

One of Bill Shook's most important designs is his patented Six Pawl Cam Actuated Engagement System found in our hubs. All six oversized pawls engage in unison whenever drive torque is applied. No other multiple pawl system on the market can ensure that all pawls are engaged at the same time. The cam plate powers the pawls into engagement simultaneously. There are new expanded cupped engagement pockets in the cam plate for improved contact. The secondary ratchet system does the coasting quietly and forces engagement of the large pawls only for drive torque transfer. The cassette body has 24 ratchet teeth for quick engagement with the pawls. Each pawl is made from super strong tool steel and has double tips for 12 points of engagement to work in conjunction with the 24 ratchet teeth. The one piece forged 7075 aluminum cassette body is hard anodized and is topped with Bill's latest steel face body design.

### STEEL FACE

#### CASSETTE BODY

Bill Shook's strong suit is finding answers to industry wide problems. Aluminum cassette bodies are damaged by the individual cassette cogs, and from loose fitting shimano cassettes. Bill Shook's ingenious answer is his latest patented design, the steel faced cassette body. All our shimano style cassette bodies are now equipped with the proven steel face on the splines so that the body will not be damaged by the cassette. Each steel insert is securely dovetailed in place by hand with Bill's specially designed insert tooling. Steel is harder than aluminum which protects the softer aluminum from being gouged by the cassette. You get the best of both worlds, a light weight aluminum body with the protection of a steel surface. The steel faced cassette will prolong the life of your American Classic hub and make changing cassettes easier. A brilliantly simple solution to an annoying problem. It is Bill Shook's attention to detail that make American Classic's wheels better than the rest.

# A CS

»Many of our customers asked us for rims because to them, there is something personal in crafting their own wheels. Bill Shook responded to this call with the new high end AC rim line.«

AGGRESSIVELY FAST

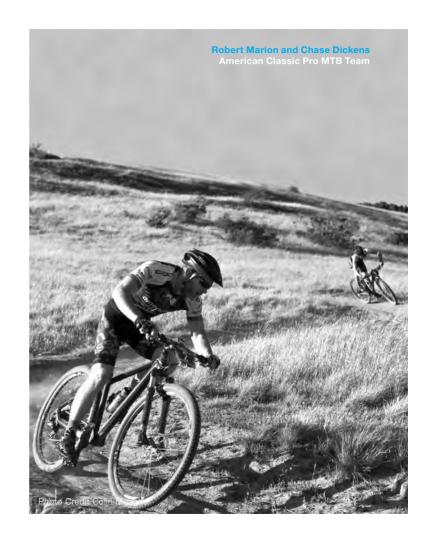

# 

#### **RESEARCH AND INNOVATION**

Our focus is on performance tubeless rims because of the demand for high quality, wide, lightweight tubeless rims for competition and training. With use of engineering, Bill created wide rim profiles in a high strength aluminum alloy that blends lightness with robustness. The rims use our proven bead barb technology to hook on the tire bead to help keep the tire in place without burping. Rims are hand joined and sleeved at our AC facility to assure roundness and uniform strength. After finishing, our AC rims are inspected by real people who carefully gauge and examine them to match our quality spec. The result is the highest quality rims that build up well, hold speed and handle decisively. American Classic rims are better than any other rim out there.

# COMPO NENTS

THE NEXT LEVEL

»Bill Shook speaks slowly, deliberately – the hallmark of a meticulous engineer who lives by a few key rules when designing wheels, hubs and components: Make them durable, strong and light. And if those parts are aerodynamic and attractive, so much the better. That formula has made American Classic – a small but influential builder – a leader when it comes to high-end components.«

Marc Sani | Bicycle Retailer & Industry News

# **QUICK RELEASE**

ROAD / TREKKING / TRIATHLON CYCLOCROSS / MOUNTAIN

LENGTH / WEIGHT Cromoly Front 100mm / 46gr Road Rear 130mm / 48gr / MTB Rear 135mm / 49gr LENGTH / WEIGHT Titanium Front 100mm / 40gr Road Rear 130mm / 42gr / MTB Rear 135mm / 43gr

This is an entirely new quick release. This tested design focuses on improved lever function so that the quick release stays closed tight. The springs are stainless steel. The cam has an aluminum on plastic glide surface. Fork contacts are knurled for a superior grip. American Classic is committed to continually improving the function of our products at all levels to offer an improved riding experience to our customers.

# **9MM AND 10MM THRU AXLE**

QUICK RELEASE

LENGTH / WEIGHT 9mm x 100mm / 64gr / 10mm x 135mm / 80gr

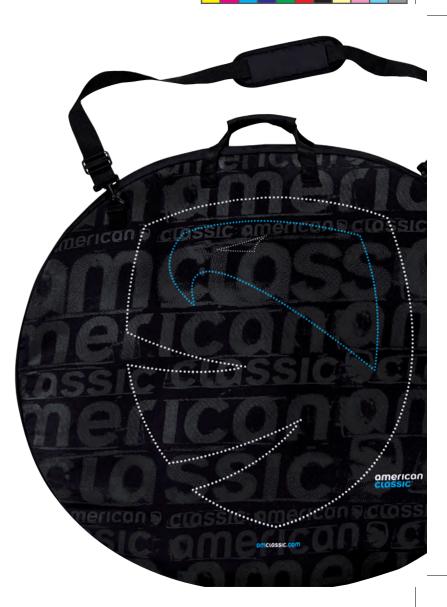

The purpose of the 9mm front and 10mm rear thru axle system is to stiffen a standard QR mountain bike frame without unscrewing an unwieldy, heavy bolt. Our Thru Axle Quick Releases act as an axle and centers the hub in the QR fork or frame drop out without fishing for adjustment. It's easy to change the wheel because it is a quick release, not a bolt. Mechanism clamps tightly. It is stronger than a traditional QR skewer with a beefy aluminum shaft and steel contact points against the frame for superior grip. For a noticeable improvement in stiffness, try the AC Thru Axle QR's.

# WHEEL BAG

#### ROAD / TREKKING / TRIATHLON / CYCLOCROSS / MOUNTAIN

Stow your wheelset in the new premium AC wheel bag, the fusion of style and function. Bill Shook generously measured out this bag making it large enough to fit a pair 29ers with beefy 2.3 tires or a pair of 700c road wheels with tires. AC black nylon alphatype graphic fabric and logo are custom designed for this project by our artists at Groupe Dejour. Thick padding inside to protect your wheel investment. Wheel bags help to keep your car and gear clean and organized. Twin zippers with carrying handles and a shoulder strap. Padded center divider and hard rubber reinforcement circles are inside each bag to prevent the axle from punching through the bag. Inner pocket features a velcro closure for storing quick releases and tools. An AC exclusive design, well thought out and luxurious like no other wheel bag on the market.

STYLE INSPIRED IN SPORT

»Apparel is a new endeavor for American Classic. We carefully chose the finest clothing available for our house designs.«

Ellen Kast | General Manager

Headsweats is a favored brand at American Classic. Both are 100% COOLMAX® fabric with wrap around wicking headband. Our adjustable visor features a velcro back closure to dial in the perfect fit for athletes on the go. INVISTA® certified sun protection race hat with an adjustable rear buckle. Machine washable. One size fits all.

# **1C** T-SHIRT

Our logo t-shirts are not just an ordinary t-shirt. They are soft and cut to wear with your favorite jeans or better yet, on the podium. A new wardrobe favorite. 100% cotton and machine washable.

MEN'S SIZES: M, L, XL, XXL WOMEN'S SIZES: S, M, L, XL

# **1C JERSEYS**

We selected the finest cycling apparel from Israeli hi-zoot apparel designer Funkier for high style and comfortable performance. Men's and Women's specific short sleeve jerseys are made with proprietary Quick Dry fabric to dissipate heat, full length zipper, and a special water resistant zipper pocket for keys and a cell phone.

MEN'S SIZES: S, M, L, XL WOMEN'S SIZES: XS, S, M, L

Men's jerseys have 3 pockets, women's have 2 pockets. The fit is true to size. Size chart available at <a href="https://www.AmClassic.com">www.AmClassic.com</a> on the clothing page.

# **IC** BIB/SHORTS

Funkier understands the importance of quality shorts for long rides. Men's bib shorts and Women's specific shorts have a 7"/18cm inseam and are constructed with 240 gram m2 lycra for free movement, and silicone gel leg grippers. We chose the highest quality, multi-layered antibacterial pads containing silky smooth perforated open cells. The F1 men's pad has an enhanced perennial channel and stitch-free square angle for air flow, comfort and protection. The women's C8 pad features 4-way stretch anatomical shaping for chafe free comfort, breathability and movement.

MEN'S BIB SIZES: S, M, L, XL WOMEN'S SHORT SIZES: XS, S, M, L

The fit is true to size. Size chart available at www.AmClassic.com on the clothing page.

#### **SERVICE** DEPARTMENT USA

American Classic offers service provided by our highly qualified Technical Staff and Wheel Builders. Services include wheel rebuilds, re-tensioning and truing, hub maintenance, hub cassette body and bearing changes, and general repairs. Call our sales department for estimates on parts and service work. Our USA sales team will take your order and issue a return authorization (RA) number.

#### **TIRE PRESSURE**

Maximum tire pressure for road clincher wheels is not to exceed 120 PSI/8.3 Bars. If your road clincher tires are rated below 120 PSI/8.3 Bars, do not exceed the rated tire pressure. Exceeding the maximum tire pressure can damage the tire and rim causing an accident and injury.

For minimum tire pressure for mountain bike wheels, follow the minimum pressure rating recommended by the tire manufacturer. Going below the minimum tire pressure can damage the tire and rim causing an accident and injury.

#### **1C** QUICK RELEASE

Your American Classic wheels come with QR hardware. Failure to close the quick release or thru axle quick release properly can result in accident or injury. If in doubt, ask your retailer to help you make sure you know how to install and remove your wheels safely. Check to ensure that your wheel quick releases are securely clamped, each time before you ride your bicycle.

#### **AC CRASH REPLACEMENT PROGRAM**

American Classic has a new wheel crash replacement plan for wheelsets bought in the USA from an authorized dealer or distributor for a period of 2 years from date of purchase by the original owner. This is a screamin' deal to protect your investment in your wheels. The original owner must keep their original proof of purchase receipt and crash replacement plan receipt in order to make a claim under this plan.

Sign up and the specific terms, requirements and exclusions of the plan are set forth at amclassic.com. The plan must be purchased within 10 days of the date of purchase of the wheelset. This plan does not apply retroactively or for wheelsets purchased on online auctions. Sign up today!
