

Rear Hub Adjustment

American Classic Rear Hub Adjustment - Victory and Terrain 15mm

Starting and finishing this repair will require that the wheel be in the bike, and the skewer clamped down.

Tools: Two 19mm open ended wrenches.

To adjust any play in the hub of your rear Victory or Terrain wheel please see examples A and B below. The dust seal on your wheel will be one of these two styles. These hubs have sleeves between the bearings and should have no side-to-side play if adjusted correctly.

A

Lock Nut

Adjuster Nut

B

Lock Nut

Rubber Seal Over
Adjuster Nut

Pull back rubber seal to
expose the adjuster nut.

Hold the adjuster nut and loosen the lock nut.
Tighten the adjuster nut. Hold the adjuster nut
and tighten the lock nut. Fix dust seal if needed.

All repairs should be performed by a Professional Bicycle Mechanic.
