

RECOMMENDED TIRE SIZE FOR AC RIMS

What size tire should I put on my American Classic rims? All recommendations listed below are for American Classic rims only.

You must follow all tire manufacturer specifications on maximum and minimum PSI/BAR ratings. Never exceed maximum pressure when inflating. We recommend using a tire that is larger than the inner width of your rim. **Example:** Do not use a 700x23c tire on 24mm internal width wheel set.

Proper assembly and tire mounting is important to rider safety.

All repairs should be performed by a professional bicycle mechanic.
